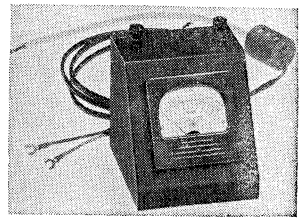
TEMPERATURE INDICATORS

WHERE TO USE: To determine heat rise of motors, transformers and coils; for laboratory furnaces, inspection set-ups, for remote indication of infrared and other oven temperatures; and to check temperatures in industrial processes such as heat treating and annealing. When used with selector switch, permits centralized reading of one to ten thermocouples, as in diesel exhaust manifold applications.

MODEL 32-J



MODEL 32-J PYROMETER IN SN-7 STAND. Mounted in sloping front black metal stand, 4¼" high x 4⅜" deep x 4⅛" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 2⅜" scale, assures ruggedness and pointer stability. To retain the ±2% accuracy of the installation: use only the type and resistance of thermocouple and lead which are provided; do not cut extra lead—coil it—change in length changes calibration. A protection tube is not generally required. Many users find it convenient to keep an extra couple and lead on hand.

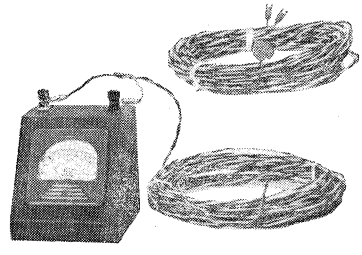
INFRARED TEMPERATURE UNITS



MODEL 32-J PYROMETER COMBINATION. When used with the thermocouples shown below, this unit checks operating temperatures of infrared baking, drying, and preheating. After selection of the proper matched tip, the user measures heat at the most important place in this method — at the surface of the work in process.
Here's a moderately-priced, always-handy tester for laboratory and pilot-run experiments, maintenance on the infrared heat source, and trouble-shooting on the finish itself. Equally important, the user can keep temperatures consistent and reproduce good results. Select the unit that manufacturers of finishes and of infrared ovens supply to their own field men. Like all pyrometers, this instrument is automatically compensated for ambient temperature — no need to re-set the zero adjuster when reading.

MODEL 32-J INFRARED PYROMETER COMBINATION. VIBRATING REED FREQUENCY METERS (PATENTED)

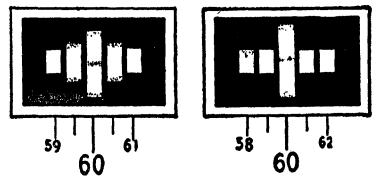
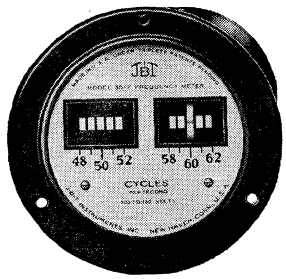
J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 14 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.



CAUTION: If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



10 REEDS

Range: 48-52 and 58-62 cycles. Double window for ease of reading either range. Often specified for export. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy ±0.3% at reference temperature. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

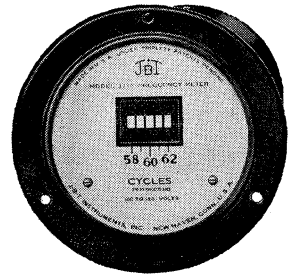
30-F, (illustrated). 48-52 and 58-62 cy., 3¼" Metal Case. **$27.50**

30-FX, 48-52 and 58-62 cy., 3½" Molded Case, MIL-M-6A mtg.

(Meter operating at 60 cycles) $27.50

5 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds, 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds.)

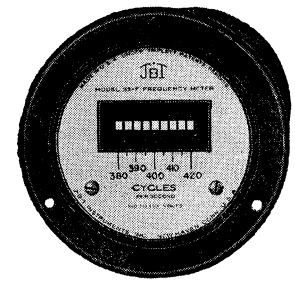


31-F, (illustrated). 58-62 cy., 3¼" Metal Case..... **$23.65**

31-FX, 58-62 cy., 3½" Molded Case, MIL-M-6A mtg..... **$23.65**

ADVANTAGES: Guaranteed accuracy at reference temperature of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.



9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy ±0.3% at reference temperature. Nine reeds, 380-420 cycle range. 100-130 volts; 70 ohms per volt; 1.75 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

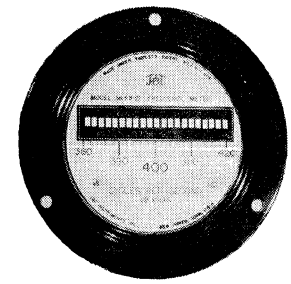
34-FX-Z, 58-62 cy., 3½" Molded Case, MIL-M-6A mtg..... **$28.90**



18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3½" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy ±0.3% at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, sucn as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

36-FX-21, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3½" Molded Case; 17 ohms per volt; 1.7 watts power consumption. **$51.60**

36-FX-21-115, (as illustrated). 380-420 cycles, 21 reeds, 100-130 volts; 50 ohms per volt; 2.5 watts power consumption..... **$52.80**

30-FX-18, (not illustrated). 46-54 and 56-64 cycles, 18 reeds in one window with two groupings, 100-130 volts; 300 ohms per volt; 0.35 watts power consumption..... **$36.30**

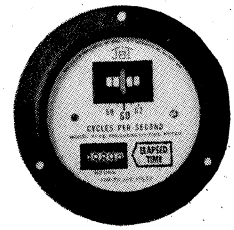
ELAPSED TIME — FREQUENCY METERS

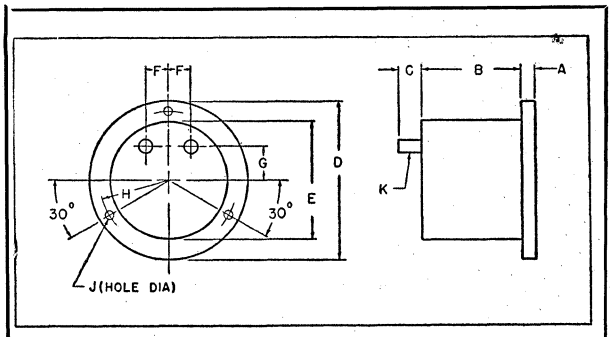


31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 3.5 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

31-FE, 3¼" metal case.....**$33.00**
31-FEX-1, (per print SK-44—not regularly stocked) like Model 31-FE, except with 3½" metal flange permanently attached for MIL-M-6A front mounting per line 7, Table of Dimensions.....**$34.10**

RUGGEDIZED FREQUENCY METERS

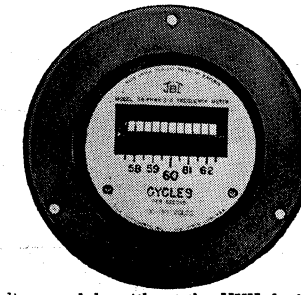
The inherently sturdy construction of vibrating reed meters usually does not need further ruggedization. Sealed meters can be supplied, on special order, to meet extra severe shock and vibration requirements. Such reed meters carry the suffix RUG.



NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3½" SEALED METERS



FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

30-FHXX, 10 reeds, 48-52 cy. and 58-62 cy.....**$34.30**
31-FHXX, 5 reeds, 58-62 cy.....**30.45**
33-FHXX, 9 reeds, 380-420 cy.....**40.90**

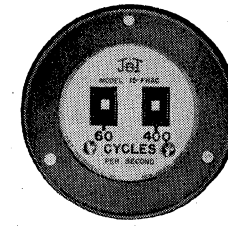
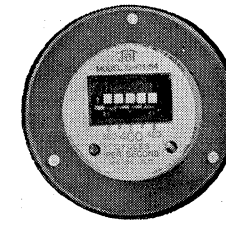
2½" SEALED METERS

On special order, J-B-T supplies 2½" sealed frequency meters with mounting per Type MR 26 of MIL-M-6A. See Table of Dimensions, Line 3. Typical is:
21-FHXX, 5 reeds, 58-62 cy. 100-130 volts **$34.85**

1½" SEALED METERS



MODEL 15-FHAC. Widely used as the frequency standard on audio-oscillators, the model illustrated operates 2 reeds, 60 and 400 cycles, at approximately 8-10 volts on 0.04 watts for a cathode follower circuit. Accuracy ±0.5% at 77°F. Steel case has telephone black case, solder terminals. Barrel is 1½" diameter; 2-3/32" detachable flange FL-4 covers glass-to-metal seal. See Table of Dimensions, line 1.
15-FHAC **$20.30**



15-FH-5 METERS (lower photo) also use the 1½" black metal case with 2-3/32" detachable flange and glass-to-metal seal. The 15-FH-5 series features 5 reeds in a row for 100-130 volt operation. Specified where size and weight are important. Same 100% inspection for approx. 57,000 ft. altitude as FHXX types. Standard meter, but not regularly stocked. See Table of Dimensions, line 1.
15-FH-54, 5 reeds, 390-410 cycles, 2.5 watts power consumption.....**$25.85**
15-FH-56, 5 reeds, 58-62 cycles, 0.25 watts power consumption.....**$21.45**
15-FH-400, 5 reeds, 380-420 cy., 2.5 watts power consumption.....**$25.85**

J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. Types for 99,999 hours or for 50 cycles are available on special order.

31-EX, 60 cy., 110-125 volts **$15.95**

Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1000 volts, R.M.S. See print SK-53. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically re-sets. Tenths indicator is in red, all others in black.

31-EHXX, 60 cy., 110-125 volts **$19.75**

2½" SEALED ELAPSED TIME METERS—60 Cycles

MODEL 21-EHXX. This new 2½" sealed meter, with front mounting dimensions the same as Type MR-26 electrical indicating instruments in MIL-M-6A, nevertheless offers a full-size counter reading 0-9,999.9 hours in 1/10th hour steps and a rugged self-starting synchronous motor. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68.

21-EHXX, 60 cycles, 110-125 volts **$24.75**

→SEALED ELAPSED TIME METER—400 Cycles←

MODEL 33-EHXX. Meeting a long-felt need for a stable 400-cycle elapsed time meter compact enough to fit in a 3½" flanged case, with all parts enclosed, is this new 400-cycle elapsed time meter. SYSTEMS CONCEPT

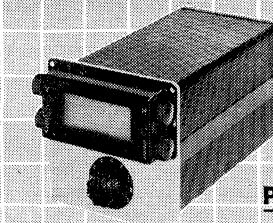
RAKSCOPE S-12-C



PANELSCOPE®

The Waterman SYSTEMS RAKSCOPE, S-12-C series is a rack mounted oscilloscope with SYSTEMS CONCEPT. Systems concept is a basic means for rapid monitoring of desired signals with minimum operative effort and without the use of auxiliary switching or jack panels. S-12-C series provide the following:

1. BASIC UNIT—The basic S-12-C SYSTEMS RAKSCOPE is a complete combination systems monitoring and trouble-shooting oscilloscope with outstanding physical and electrical characteristics. The RAKSCOPE occupies but 7 inches of a standard 19″ rack and extends only 10 inches behind the front panel. Identical vertical and horizontal amplifiers are DC type having rise times better than 0.35 usec, and 50 or 71 millivolts rms per inch of deflection respectively. Signal calibration method uses a direct reading accurate meter. Time base sweeps are from ½ cps to 50KC in trigger or repetitive operation. Sync from internal or external sources provide stable operation by means of new sync lockout circuits. Special plug-in elliptical sweep circuit for easy phase and frequency checks greatly increase its systems utility. Construction is ruggedized throughout. Tube type options include standard commercial, ruggedized commercial or ruggedized military. Operable from 50 to 400 cycles.

2. CUSTOM MODIFICATION—Desired flexibility is obtained with the optional signal input selector. For the first time it is possible to select up to eleven different signal sources with the necessary built-in attenuation (supplied by us or by you) for each source. Thus the entire switching panel can be omitted from an overall system resulting in circuit and space economics. Standard elliptical sweep is 60 cycles, but plug-in units for other frequencies can be supplied. Accessories such as attenuating, direct, and amplifying probes are available.

Improve your existing or contemplated systems by including the S-12-C SYSTEMS RAKSCOPE as an integral part. Your local Waterman representative is ready to assist you in determining specific requirements.

The Waterman PANELSCOPE is a custom-built cathode ray tube oscilloscope, with simplified operation, and yet available at a low price. The PANELSCOPE concept provides for the following:

(1) MINIATURIZATION—Panel space required is only 5¼″ x 5-3/16″—depth is 10″ and the weight is less than 7 lbs. The PANELSCOPE can be installed in practically any equipment—mobile or stationary—air, sea, or land—military or commercial.

(2) SIMPLICITY OF OPERATION—Twist of a single rotary switch provides a synchronized pattern of desired incoming signal (up to 11 circuits) against proper linear time base. This is ideal for monitoring and trouble shooting, as it removes the need of fiddling with knobs as is done now on general purpose oscilloscopes. The static controls, such as beam, focus, positioning, and graticule brightness are located in tube escutcheon.

(3) CUSTOM DESIGN—A wide variety of—signal amplifiers with response from dc to megacycles and sensitivities from 5 millivolts—synchronized or triggered linear time base generators from ½ cycle (and lower if need be) to 2 microseconds—can be specified by you to fit your needs for particular equipment.

(4) PARTIAL KIT FORM—the PANELSCOPE comes fully wired and tested with chosen signal amplifier, linear time base generator and attendant sync. amplifier. The desired signal attenuators, frequency and amplitude determining components, and method of synchronization can be installed either by us or by you.

(5) POWER REQUIREMENT—Less than 10 watts of line power for built-in high voltage supply—The required B+ and heater current as selected by your requirements. For those cases where B+ and heater power is not available, auxiliary power pack can be supplied.

There is a place in your equipment for Waterman PANELSCOPE, a custom built oscilloscope at production prices, although your needs may be but one or two. Ask for specification sheets either from our representatives or direct from the factory.

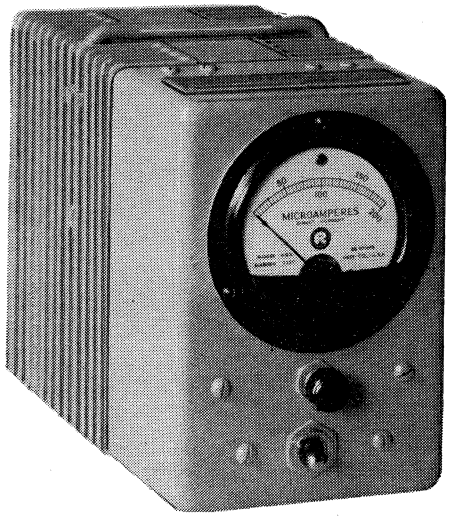
THERMISTOR BRIDGE TYPE POWER METERS



TRUE AVERAGE READING

These broad band R.F. power meters are of the absorption type consisting of an oil filled, air cooled coaxial load resistor and thermistor type power bridge calibrated to read watts.

A thermistor is used as the power sensitive element. Temperature and voltage variation compensation is incorporated in a sensitive bridge type circuit. The instrument is battery operated.

The power is read directly on the 0-200 microamperes and is read in direct relation to the meter division. For instance, the full scale power reading is 200 watts at 200 microamperes, 100 watts at 100 microamperes and 25 watts at 25 microamperes.

The accuracy of this instrument is greater than that of the dummy load volt meter type power meters using a silicone diode for the power detecting element. The thermistor type power detector depends only on the heat developed by the radio frequency power in it, and errors, due to spurious resonance, poor V.S.W.R., are greatly reduced, if not completely absent. The accuracy is ±3% of full scale and no more than ±6% at any point of the scale.

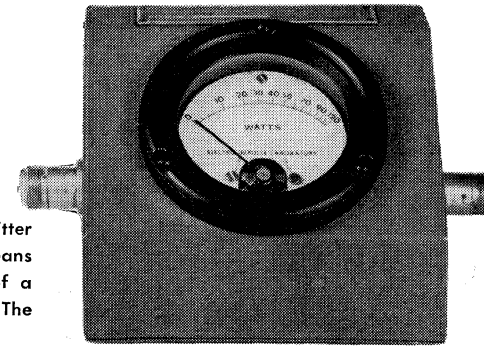
FEED-THRU TYPE POWER MONITOR



Frequency Range 30-200 and 1500-1000 Mc

Measures incident and reflected power and permits adjustment of transmitter with antenna connected. Each instrument covers two power ranges, by means of a toggle switch. The direction of measurement is switched by means of a turning element in rear of instrument. The accuracy is ±5% of full scale. The instrument is self-contained and no auxiliary power is required.

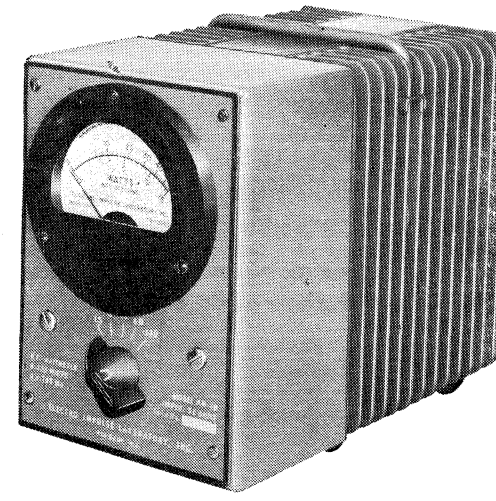
AVERAGE READING R.F. POWER METERS

100 kc to 700 mc . . . 1.5 watts to 6000 watts



These broad band R.F. power meters are of the absorption type consisting of an oil filled, air cooled, coaxial load resistor and voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load.

No correction curve is necessary to cover the frequency range. The spurious response usually associated with directional couplers and capacitative voltage dividers is absent in this purely resistive voltage divider.

Since this is a resistive voltage divider which has the same voltage division at DC, 60 cycle AC, and at high radio frequencies, this instrument can be calibrated and its calibration can be checked frequently on 60 cycle supply voltages. The instruction book accompanying our R.F. power meter gives full instructions on the calibration of these power meters, using 60 cycle power supply. Such calibration is necessary only when crystals or vacuum tubes are changed, or when possible damage to the crystals or vacuum tubes is suspected.

ACCURACY

These Power Meters do not use specially selected crystals or vacuum tubes. If the calibration instructions are carefully followed, an overall accuracy of —5% of full scale, but not more than 10% at any point of the upper 80% of the meter scale can be expected. For example, on the 60 watt scale an error of 5% of the full scale is 3 watts. At 15 watts this error would result in a reading somewhere between 12 and 18 watts. Our power meters are guaranteed to be within 10%, at the 15 watt point, and the reading should be between 13.5 and 16.5 watts.

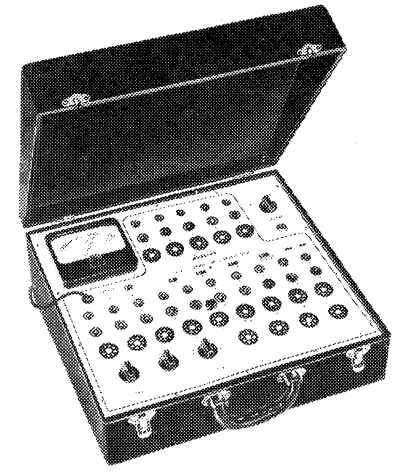
TEST 5 TUBES in 4 SECONDS each . . . ACCURATELY

• NEW PRECISE MODEL 116
Em & Gm ULTRAFAST TUBE & TRANSISTOR TESTER



Servicemen know the Precise Model 111 (the winner in an independent survey) easily rates "the finest tube tester in the field" at any price, BUT FOR AN ON THE JOB QUICK-TEST . . . the fastest, most accurate is the PRECISE Model 116. What's more you test tubes the foolproof method inherent in the famous Precise Model 111.

Did you ever wish you could plug in 5 of the same type tubes at once and check each one individually by rotating a switch? YOU CAN WITH THE PRECISE MODEL 116—Plug in 5 IF tubes and let them heat up at once and then check each one separately by rotating the TUBE BANK switch. ACTUALLY CHECK 5 TUBES IN 20 SECONDS. 4 SECONDS PER TUBE.

The Precise Model 111 taught the lesson that IF amplifier tubes (like the 6BC5 or 6AU6) should be tested for GM (mutual transconductance) while the power amplifiers (like the 6L6) should be tested for Em (emission). The Model 116 test checks each section of each tube separately . . . by rotating the FUNCTION SWITCH . . . each triode of a dual triode is checked individually . . . each diode and the triode of a duo-diode-triode is separately tested and not lumped as in other testers . . . and a pentode is tested as a pentode—not a diode. TRANSISTORS, SHORTS, GAS, LIFE, Em Gm etcetera can be tested with the PRECISE Model 116.

You can inexpensively extend the Precise Model 116 to test filament current, etc. The Model 116 gives an accurate, ultra-fast (3 basic knobs for testing) check of television tubes!

No Surplus—An etched panel—beautiful Moleskin covered wood carrying case and cover and specially simplified instructions makes the PRECISE MODEL 116 THE FINEST FAST-CHECK TUBE TESTER AND DOLLAR EARNING TRAVELING COMPANION A TV SERVICEMAN EVER HAD.

INDEPENDENT SCIENTIFIC SURVEY AND LAB TESTS PROVE PRECISE MODEL 111 "BEST COMMERCIAL TUBE TESTER AT ANY PRICE."

ENGINEERING DESIGN CONSIDERATION: To understand the Model 111 Mutual Conductance and Emission Tube Tester, it is perhaps best to spend a moment with the original design considerations. Basically we recognize the fact that:

1. A GM or Emission type tube tester actually read a goodly percentage of tube troubles—BUT each alone missed a great many. We could not say with any degree of assurance which type of tube test was the best. Certain applications required GM, while others required Emission. PRECISE Solution: The Model 111 checks Gm and Emission separately. It indicates on the roll chart the most important single test for normal applications. It is, of course, desirable to make both tests.
2. In series T.V. filament arrangements, which are daily enjoying greater popularity, the "Voltage Sapper" (a tube which developed too much filament voltage as compared to the other tubes) was a constant trouble. PRECISE Solution: The Model 111 allows the filament current to be measured directly on the meter.
3. A whole series of different test voltages (sweeping from zero voltage up) was required. PRECISE Solution: The Model 111 sweeps from 0 through the normal testing range when making measurements. This gives an average evaluation for the tube over an extended range of operation.
4. Short tests usually require elaborate switch manipulation. PRECISE Solution: The Model 111 uses a single rotary switch which checks each element against every other element. No conversion chart is required to ascertain which pins are shorted. This test may be made at any time hot or cold without changing any other switches.
5. The instrument would have to be rugged to stand the "trunk of a car" type of abuse. PRECISE Solution: In the Model 111 a heavy wooden cabinet houses the entire unit. The panel is deeply etched aluminum.
6. Tube Bias, being an important consideration, should actually be measured on the meter. PRECISE Solution: The Model 111 measures tube bias directly on the indicating meter.
7. The instrument should be simple to operate. PRECISE Solution: The Model 111 uses a no-blacklash roll chart, and a sectionalized design setting off each section.
8. There should be a provision for new tubes. PRECISE Solution: The Model 111 is one of the simplest type tube testers to set up for new tubes. The pin connections and function positions may be taken directly from the tube manual. The instrument already includes provisions for testing many color tubes.
9. It should check all modern tubes. PRECISE Solution: The Model 111 is provided with sockets for testing the following type bases. Large 4 prong, large 5 prong, large 6 prong, large 7 prong, medium 7 prong, miniature 7 prong, in-line 7 prong (sub-miniature), Octal, Noval, sub-miniature 8 prong, CRT and Loctals. Weight 24 lbs. Size 14" x 16" x 6".
10. The instrument should check Cathode Ray Tubes. PRECISE Solution: The Model 111 also checks cathode ray tubes with CRT adaptor. Model PTA-K $2.95, PTA-W $4.25.

• NEW PRECISE MODEL #315 5" OSCILLOSCOPE

The PRECISE Model 315 is a best buy as a low cost, high quality oscilloscope for general radio and TV applications. It features such innovations as frequency compensated vertical and horizontal attenuators along with identical vertical and horizontal amplifiers.

The Model 315 is rugged and simple to build. It uses a 5CP1 type tube with a post accelerator. Both the horizontal and vertical sections are cathode-follower input type and are AC coupled.

The instrument is housed in a grey steel cabinet. Attractive brushed aluminum with black lettering and a bezel comprise the front panel.

SPECIFICATIONS:

VERTICAL — The vertical amplifiers are within ±6db through 500KC. Single ended, AC coupled, cathode follower, frequency compensated stepping attenuator input. Basic sensitivity is approximately 250 millivolts per inch. Outputs are push-pull.

HORIZONTAL — The same general specifications as the vertical amplifier.

SYNCHRONIZATION — External, internal.

SWEEP RATE — From approximately 10 cycles to 100 KC. Hard vacuum type sweep circuit.

CALIBRATION — 6.3 volts sine wave.

FOCUSING — Focus, intensity and astigmatism controls. The astigmatism control is available from the rear. A standby switch is used to turn off CRT filaments when not in use.

As you know Precise does not use, nor advocate, surplus parts — especially in a kit. In accordance with this policy (although a cathode ray tube is supplied with each Model 315 as a convenience, at no charge) we are officially listing this instrument without CRT. The CRT supplied, free of charge, is new, guaranteed for 1 year, has never been used and was purchased from the Government in its original unopened carton. If a new tube, not Government, is desired it is available at an additional charge of $14.00.

- Tests all tubes, including 4, 5, 6, 7, Octal, Lock-in, Peanut, Bantam, Hearing Aid, Thyratron, Miniatures, Sub-miniatures, Novals, Sub-Minars, Proximity fuse types, etc.
- Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TV-11 as any of the pins may be placed in the neutral position when necessary.
- The Model TV-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.
- Free-moving built-in roll chart provides complete data for all tubes.
- Newly designed Line Voltage Control compensates for variation of any line voltage between 105 Volts and 130 Volts.
- NOISE TEST: Phono-jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose internal connections.

The model TV-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover.

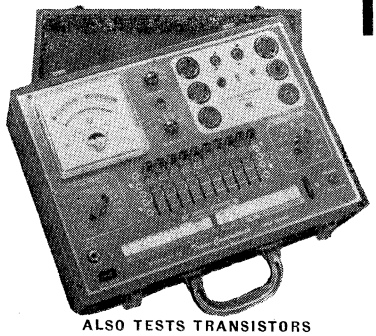
TRANS-CONDUCTANCE TUBE TESTER



ALSO TESTS TRANSISTORS

TESTING TUBES

- **Employs improved TRANS-CONDUCTANCE circuit.** An in-phase signal is impressed on the input section of a tube and the resultant plate current change is measured. This provides the most suitable method of simulating the manner in which tubes actually operate in Radio & TV receivers, amplifiers and other circuits. Amplification factor, plate resistance and cathode emission are all correlated in one meter reading.
- **NEW LINE VOLTAGE ADJUSTING SYSTEM.** A tapped transformer makes it possible to compensate for line voltage variations to a tolerance of better than 2%.
- **SAFETY BUTTON** — protects both the tube under test and the instrument meter against damage due to overload or other form of improper switching.
- **NEWLY DESIGNED FIVE POSITION LEVER SWITCH ASSEMBLY.** Permits application of separate voltages as required for both plate and grid of tube under test, resulting in improved Trans-Conductance circuit.

TESTING TRANSISTORS

A transistor can be safely and adequately tested only under dynamic conditions. The Model TV-12 will test all transistors in that approved manner, and quality is read directly on a special "transistor only" meter scale.

The Model TV-12 will accommodate all transistors including NPN's, PNP's. Photo and Tetrodes, whether made of Germanium or Silicon, either point contact or junction contact types.

The New Streamlined Model TC-55

TUBE TESTER

FOR: The Experimenter or Part-time Serviceman, who has delayed purchasing a higher priced Tube Tester.
FOR: The Professional Serviceman, who needs an extra Tube Tester for outside calls.
FOR: The busy TV Service Organization, which needs extra Tube Testers for its field men.

Speedy, yet efficient operation is accomplished by: 1—Simplification of all switching and controls. 2—Elimination of old style sockets used for testing obsolete tubes (26, 27, 57, 59, etc.) and providing sockets and circuits for efficiently testing the new Noval and Sub-Minar types.

You can't insert a tube in wrong socket. It is impossible to insert the tube in the wrong socket when using the new Model TC-55. Separate sockets are used, one for each type of tube base. If the tube fits in the socket it can be tested.

"Free-point" element switching system. The Model TC-55 incorporates a newly designed element selector switch system which reduces the possibility of obsolescence to an absolute minimum. Any pin may be used as a filament pin and the voltage applied between that pin and any other pin, or even the "top-cap."

Checks for shorts and leakages between all elements. The Model TC-55 provides a super sensitive method of checking for shorts and leakages up to 5 Megohms between any and all of the terminals. Continuity between various sections is individually indicated. This is important, especially in the case of an element terminating at more than one pin. In such cases the element or internal connection often completes a circuit.

Elemental switches are numbered in strict accordance with R.M.A. specification. One of the most important improvements, we believe, is the fact that the 4 position fast-action snap switches are all numbered in exact accordance with the standard R.M.A. numbering system. Thus, if the element terminating in pin No. 7 of a tube is under test, button No. 7 is used for that test.

The Model TC-55 comes complete with operating instructions and charts. Housed in rugged steel cabinet. Use it on the bench—use it for field calls. A streamlined carrying case, included at no extra charge, accommodates the tester and book of instructions.

MicroMatch | RF POWER AND VSWR MEASURING EQUIPMENT

MICROMATCH is the registered trade name which identifies a complete line of M. C. Jones Electronics Co., Inc. R. F. Power and VSWR measuring instruments.

These instruments contain a patented circuit designed to produce an output essentially independent of frequency. They cover the frequency range of 0.5 to 4000 mcs. and power levels of 10 milliwatts to 120 kilowatts.

The R. F. Power and VSWR instruments are rugged field and laboratory type complete measuring equipment, consisting of both coupler and indicating units.

The DC and RF output coupler units only are sold principally to manufacturers who incorporate these units directly into government or commercial type transmitters.

Because they are made in quantity to the highest government and commercial standards, MICROMATCH instruments combine the highest quality with extremely low cost.

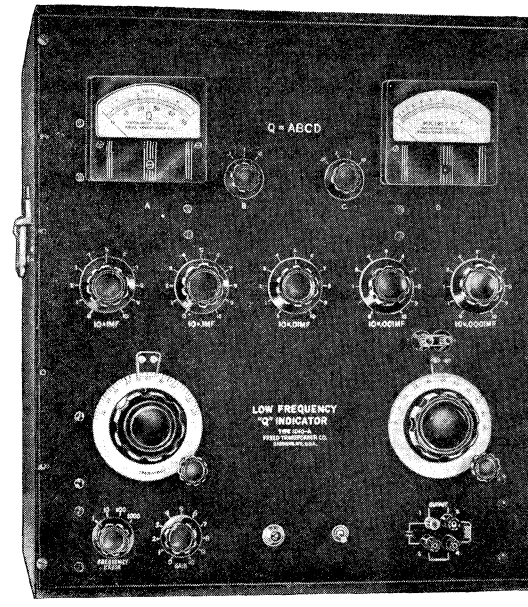
TYPE 1030-A LOW FREQUENCY "Q" INDICATOR

USES

The Type 1030-A Low Frequency "Q" Indicator measures directly the "Q" factor of coils. The instrument can also be used to measure the inductance of coils, distributed capacity, impedances, and dielectric losses. The "Q" Indicator can be used to study the magnetic properties of iron, such as stability of iron cores in function of applied voltages, and iron losses as a function of the frequency.

FEATURES

The main and essential feature of the instrument is that the "Q" factor is read directly without any complicated computations. The possibility of measuring "Q" through the whole audio and supersonic frequency range is provided. The setting up and the measuring of the "Q" of coils is practically instantaneous. The instrument is unaffected by line voltage variations, is entirely self-contained and A.C. operated. Both meters ("multiply-by" and "Q") are protected against overloads and cannot be burned out. The frequency range for "Q" measurements is 20 to 200,000 cycles. The terminals of the variable decade condensers are available directly on the front panel of the instrument. The condensers, therefore, can be used as high quality precision variable condensers. To reduce the residual capacitance a link is provided on the front panel of the instrument which disconnects all but the 100 mmfd variable air condenser. When the link is closed five decade capacitors and the air variable are connected across the condenser terminals. The total capacitance range is from 26 mmfd to 11.11 mfd so that an extremely wide range of inductors may be tested at any



desired frequency without adding external capacitors which introduces large errors. The R. C. Oscillator and variable impedance amplifier can be used as a separate low frequency generator with an output power of five watts into a 50 ohm load. The "Q" scale is calibrated from 0 to 100. A high accuracy of measurement is obtained, since "Q" variations from 0 to 100 are read on a 4 inch meter. "Q" factors of coils can be measured with up to 100 volts across the coil, and therefore makes it possible to determine the stability and the variations of the "Q" factor of coils as a function of the applied voltage. The voltage fed into the series circuit is variable from 10 volts to .01 volt.

DESCRIPTION

The instrument is a direct-reading, precision-balanced electronic ohmmeter with a variable D.C. test potential included as part of the unit. The D.C. test potential is variable from 50 to 1000 volts and is indicated by a four inch meter.

The insulation resistance is measured in six overlapping ranges and is indicated by a four inch meter, protected against overload. A relay, operated from the front panel, disconnects the high voltage from the test terminals and eliminates all danger of shock due to exposed high potential. TYPE 1010-A COMPARISON AND LIMIT BRIDGE

USES

This instrument is a comparison and limit bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filters) where very accurate components are required.

FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual null indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

DESCRIPTION

The instrument is composed of an oscillator, a bridge and a selective amplifier. The oscillator output is coupled into the bridge through a shielded isolation transformer. A switch is provided which connects either a high or low impedance winding across the bridge, consisting of two fixed resistors, the unknown impedance and the standard. A variable resistor between the two fixed resistors makes it possible to read the percentage difference between the unknown and the standard on a specially calibrated dial. A high gain selective amplifier indicates the balance of the bridge. The general method of testing is the comparison of an unknown component with a standard component of the same type. Accurate percentage measurements are obtained by the use of precision components in the arms of the bridge. The use of a high gain amplifier and adequate internal shielding assures a very sharp and distinct balance.

A visual null indicator, consisting of a meter used in connection with the high gain amplifier makes it possible to use the No. 1010-A Bridge as a precision limit bridge in production testing.

SPECIFICATIONS

Frequency: Three test frequencies are available: 50 or 60 cycles, 1000 cycles and 10,000 cycles.

The 50 or 60 cycles are taken from the line. The 1000 and 10,000 cycles are generated by an oscillator and are accurate to within ±2%.

Range: Two comparison ranges are provided. 5% and 20%. The percentage difference is read directly on a calibrated dial.

Resistor Measurements: Resistors from 1 ohm to 20 megohms may be compared at 60 cycles to an accuracy of ±0.1%.

Condenser Measurements: Condensers from 50 mmfd to 10 mfd are measured at 1000 cycles. Condensers above 10 mfd are measured at 60 cycles. Condensers below 50 mmfd may be measured if the ground-unground switch is in the unground position.

Inductor Measurements: Inductors may be measured at 60, 1000 or 10,000 cycles depending on their value. Range: 10 microhenries to 1000 henries.

USES

The Incremental Inductance Bridge is designed for measuring the inductance of Iron Core components at any frequency up to 10,000 cycles. Inductors can be measured with a superimposed direct current, therefore, the bridge will measure the incremental inductance of coils. The bridge can be used by the manufacturers of iron core components, such as filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

TYPE 1410 DISTORTION METER

USES

The Type 1410 Distortion Meter may be used in the laboratory or in production testing of receivers, amplifiers and oscillators.

DESCRIPTION

The instrument consists of a capacitive input attenuator, a low impedance output preamplifier, a null T network and a high gain vacuum tube voltmeter.

The signal to be measured is applied to the capacitive input attenuator, which reduces it sufficiently so that it may be fed into a three stage distortionless amplifier. The output impedance of this amplifier is 1 ohm due to the high amount of inverse feed back applied. In order to prevent the amplifier from being driven into non-linearity, a monitoring circuit is included in the instrument.

The attenuated signal is fed into a null T network which completely eliminates the fundamental. The residual signal consists wholly of harmonics and noise, and this is measured by the vacuum tube voltmeter.

The null T network is switched out of the circuit and the signal level is attenuated by a calibrated resistive divider. When the voltmeter indicates the same level as the level of harmonics, the divider reads the percentage distortion directly.

FEATURES

The high sensitivity of the instrument permits measurements to be made on signals as low as 0.2 volts to an accuracy of 0.1%. Signals as high as 1000 volts may be applied to the input terminals directly.

The frequency range of the instrument is 20 kc to 1 mc. in 10 overlapping ranges. Frequencies up to 3 mc. are passed without attenuation by the amplifier circuits, so that distortion measurements can be made on fundamental frequencies up to 1 mc.

An isolation transformer and line filter provided with the instrument prevent any feedback through the power line.

SPECIFICATIONS

Frequency Range: 20 kc to 1 mc.

Input Impedance: 500,000 ohms shunted by 70 mmfd. (plus capacity of input cable) on all ranges but the 0.1 volt range. The shunt capacity on this range is 800 mmfd.

Accuracy: Harmonic Distortion can be measured accurately to 0.1%.

Sensitivity: Distortion levels of 0.1% can be read accurately for a signal input as low as 0.2 volts. Maximum input signal is 1000 volts rms.

Elimination Characteristics: Eliminates fundamental completely while attenuating second harmonic approximately 3%.

Power Supply: 105:125 volts, 50-60 cycles.

Dimensions: 19¾" x 16¾" x 15¾".

Net Weight: 60 pounds.

FREED DECADE CAPACITORS

Freed decade capacitors are high quality capacitors designed for use in wave filters, tuned circuits and equalizers for audio and supersonic frequencies where a rather large variable capacitance is desired. Their stability, accuracy and low dissipation factor make them especially useful during the preliminary design period when capacitance values are determined experimentally.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately. The accuracy is ±1% at frequency of 1 kc.

No. 1350 **No. 1351**

No. 1350 is a five section decade capacitor. The type 1415, 1416, 1417 and 1418 are mounted on one panel with a 1000 mmfd precision air variable condenser.

No. 1351 is a six section decade capacitor. The type 1415, 1416, 1417, 1418 and 1419 are mounted on one panel with a 100 mmfd precision variable condenser. The 100 mmfd may be used singly in which case the stray capacity is less than 10 mmfd or it may be used in conjunction with the other decades by simply closing a shorting link.

The capacity is continuously variable from 10 mmfd to 11.1111 mfd in 100 mmfd steps with ±1% accuracy.

The maximum voltage that may be applied to these decades is 500 D.C. working volts.

The dissipation factor of the polystyrene units when measured at 1 kc. is less than .0002. The dissipation factor of the 1 mfd/step decade (mylar) is less than .005.

PORTABLE FIELD STRENGTH METERS

UHF-VHF . . . gives direct reading in microvolts

Model 510 **Dealer Net $124.50**

Lets one man do the work of two — in less time, with greater accuracy. He can take the meter on the roof, locate and orient the antenna by himself — even before running lead-in. On master antenna systems he checks each outlet, quickly, without guesswork. This efficiency reduces call-backs, builds confidence, makes larger profits.

Continuous tuning through VHF and UHF TV channels 2 to 83, FM Broadcast bands and VHF aviation communications bands (50-220 Mc and 260-940 Mc). Vernier type scale for accurate logging. Direct reading in microvolts.

High sensitivity assures better installations particularly in fringe UHF areas; 5 to 50,000 microvolt graduations on VHF, 50 to 100,000 on UHF. 3 i.f. stages; i.f. 20 Mc. High selectivity — 5 Mc bandwidth at 6 DB down. Permits separate measurements of audio and video portions of carrier. 300 ohms input. Phone-jack. Operates from self-contained batteries. Standard dry cells — 3 45-volt B and 2 1½-volt A. Rugged case of non-corrosive aluminum. Size 11 x 8½ x 6 in. Weight 9 lbs. less batteries. Sold less batteries.

Pocket Size VHF . . . completely transistorized

Model 520 **Dealer Net $49.50**

A low cost field strength meter that performs all the functions of the larger Model 510 except that it gives you relative readings — not direct. For VHF only. Smaller, lighter, fits pocket of work jacket.

Simplified switch tuning (channels 2-13). Sensitivity control regulates panel meter and audio. 300-ohm input. Phone-jack. Operates from self contained batteries. Durable case of black hi-impact phenolic, with brushed aluminum shell. Size 8 x 4 x 2 in. Weight 2 lbs. with batteries.

AC POWER "VAMP" METER

Model 530 **Dealer Net $37.50**

Nothing like it on the market. Does the work of two ordinary meters. Specially designed for contractors, installation personnel, utility servicemen who work with major appliances, air conditioners, etc. Indicates fuse requirements. Tests capacity of any outlet before use. Gives you voltage and amperage of any appliance in use.

Tests AC volts 0-130, AC amps 0-30, watts 500-1000-1500, or horsepower ½ 1-1½. Can pre-test an outlet for capacity to supply up to 1500 watts or to start and run a motor up to 1½ H.P. Can give voltage and current consumption of appliance under load — even while additional dummy load is applied to circuit to test its effect. Has built in overheat control.

Fine appearance — hi-impact phenolic and perforated aluminum, recessed meter faces and knobs. Cord set wraps around side of instrument in space provided. Small size — only 8 x 4 x 2 in. Lightweight — no transformers. Completely self-contained — no outside probes or accessories required.

Scala DUAL MARKER INJECTOR

— BEST FOR B & W TV LABORATORIES!

— ABSOLUTELY A *MUST* FOR COLOR TV!

The Dual Marker Injector SAVES TIME

. . . in alignment jobs

. . . in adjusting broad-band amplifiers

. . . in critical marking in color and monochrome TV

. . . does not disturb circuits being adjusted

. . . offers more accuracy

SCALA DUAL MARKER INJECTOR (SMI-53X) (patent applied for)—
Nothing else to buy—it works with your present marker generator, sweep generator, and oscilloscope.

Made by Scala, developers of the original bypass marker injector system.

The simplest, most legible, and most economical marker injector—and it requires less than 2,000 microvolts of signal!

THE SECOND MARKER MAKES EVERYTHING SIMPLER—

With two marks on the response curve, you don't have to re-set the marker or the sweep-generator frequency or attenuator.

Now you can realign with accuracy, simplicity, and speed that dual mark techniques make possible on manufacturers' assembly lines.

Receiver characteristics don't affect the marker size, so there is no stage-by-stage reconnecting.

The marker generator can be calibrated against the Scala Dual Marker Injector's crystal oscillator without interrupting alignment procedure.

FOR LABORATORIES, COLOR TV, AND RADAR, TOO—

The extremely critical frequencies used in color TV chassis and radar equipment are no problem for the man with a Dual Marker Injector. You simply replace the easily accessible crystal on the front panel with one of another frequency (1 to 4.5 MC) and you are thoroughly equipped for the job. No worries about accuracy, marker size, or disturbing 6AG5 circuit being tested.

SPECIFICATIONS—

Two 6AG5 high-frequency isolating mixers; selected diode detector; one 6SL7 Xtal osc-amp.; one 6SN7 video and marker mixer; one 5Y3 rectifier; one 4.5 MC crystal (±.02%). Useful to 250 megacycles. Shipping weight: 13 lbs. At leading jobbers, **$79.50.**

SCALA SUPER MARKER INJECTOR (SMI-53) Same as above, less dual mark feature and built-in crystal oscillator. At leading jobbers, **$67.50**

SPARE CABLE (SMI-C) for Super Marker Injector..... **$1.00**

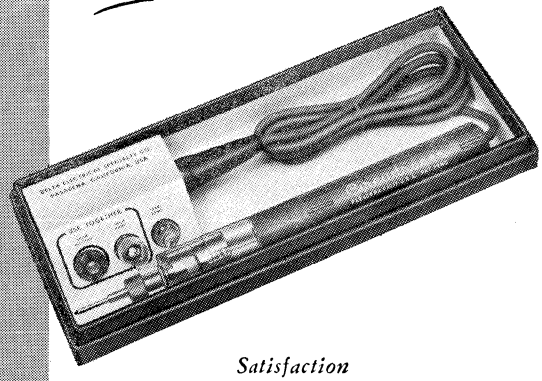
Tracks 'em Down Dead or Alive

ONLY THE VERSATILE DESCO* Circuitracer*

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

Pocket Size!



Satisfaction Unconditionally Guaranteed

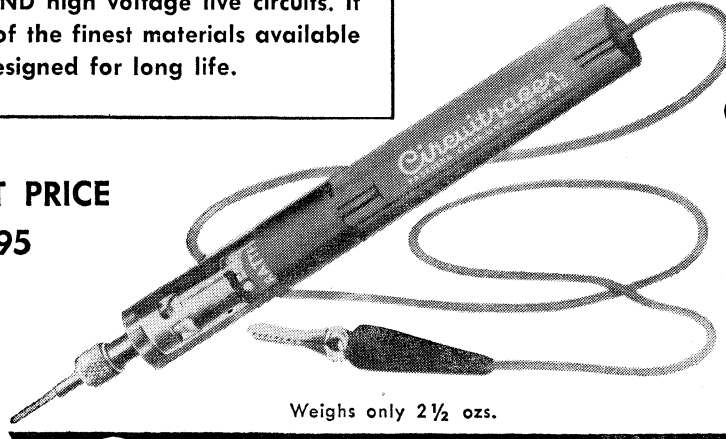
DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.



Weighs only 2½ ozs.

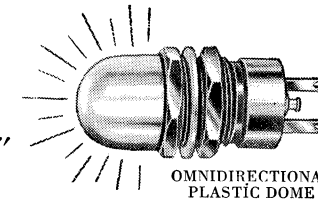
THESE PILOT LIGHTS CONFORM TO ALL APPLICABLE MILITARY SPECIFICATIONS.

For FRONT of Panel Insertion: Requires single 17/32" clearance hole.

For BACK of Panel Insertion: Requires single 15/32" clearance hole.

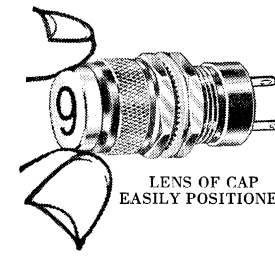


OMNIDIRECTIONAL PLASTIC DOME

EASY LAMP REPLACEMENT: All assemblies (whether for front or rear insertion) have this important feature: The plastic domes or metal caps are easily removed from front of panel — thus making the lamps accessible for easy lamp replacement. Please refer to our Form L-156A which describes these units in detail.

PLASTIC DOME — OMNIDIRECTIONAL: The unique "stovepipe" lens, moulded of high heat plastic, radiates light in all directions. Heavy plastic walls are reinforced by threaded brass insert. This fitting receives lamp well up into plastic dome for maximum light dispersion.

LENS WITH MESSAGE — easily positioned. A DIALCO exclusive is the specially designed cap-and-lens (as shown at right). By pressing on spring-mounted lens and rotating in either direction the legends may be positioned *after* installation of the assembly.



LENS OF CAP EASILY POSITIONED

INSULATED: Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached.

FINISH: Black nickel.

LIGHT SOURCE: T-1¾ midget flanged incandescent lamps. Available in the following voltages.

Lamp No.	Volts	Amps	Life (Hours)
331	1.3	.06	500

DIMMING

TERMINALS: Rugged soldering terminals.

Also TAPER-TAB SOLDERLESS TERMINALS: All Dialco 2-terminal units may be so ordered. Taper-tabs reduce assembly time, cut costs, and enable use of smaller and lighter parts. Self-locking action and high contact pressure assure reliability.

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

MULTI-VUE or CLEAR CAPS

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the left gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the CLEAR CAPS shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

for Protection of Radios, Instruments and Electronic Equipment

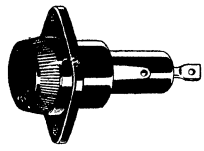
BUSS "QUICK-BLOWING" FUSES

600 Volt. $^{13}/_{32}$ x $1\frac{3}{8}$ inch. Fibre tube. For protection of control circuits or fluorescent lighting circuits or wherever a fuse with "quick-blowing" characteristics is desirable. Listed as approved by Underwriters' Laboratories for voltages up to 600, 0 to 5 ampere.

Voltage	Symbol	Amperes	List Price
600 or less	**BBS**	1, 2, 3 or 5	$0.18

Fuseholder for BBS fuses. Use HPC-L fuseholder or No. 3845 single pole, side barrier porcelain fuse block. Only BBS fuses (or others with exact same dimensions) will fit these holders. This assures replacement of proper size fuse.

PANEL MOUNTED HOLDERS for $^{13}/_{32}$ x 1½ inch Fuses



Screw type knob. Molded phenolic body. Holder attached to panel by screws or rivets. Strong coil spring provides contact pressure on ends of fuse. Normal current carrying capacity 22 amperes. Listed as approved by Underwriters' Laboratories for 15 ampere rating for any voltage up to 250.

HPC (for FNM and KLM fuses) List Price $0.60

HPC-L Holder for $^{13}/_{32}$ x $1\frac{3}{8}$ inch Fuses. Like HPC Holder. Has Underwriters' Laboratories approved listing for 5 ampere rating and any voltage up to 600.

HPC-L (for BBS fuses) Prices on request.

PANEL MOUNTED HOLDERS for ¼ inch Fuses

Can be used on panels up to $^{5}/_{16}$ inch thick.

Bayonet type knob. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

20 ampere size is an SFE 20 fuse.

Sizes larger than 30 ampere are not recommended as clips or fuse holders would not permit fuse to carry such high currents. If surges or starting currents make heavier fuse necessary, use MDL Fusetron dual-element fuses.

FUSETRON FUSES, ¼ x 1¼ inch

DUAL-ELEMENT SLOW BLOWING TYPE

Stop needless blows from starting currents or surges. Fuse link operates only on very high overloads or short-circuits. Thermal cutout functions on low overloads — cannot operate quickly at any load, so long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

LITTELFUSE "Quicker than a Short Circuit"

4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft services for their strength and greater carrying capacity han 3 AG fuses.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

LITTELFUSE *"Quicker than a Short Circuit"*

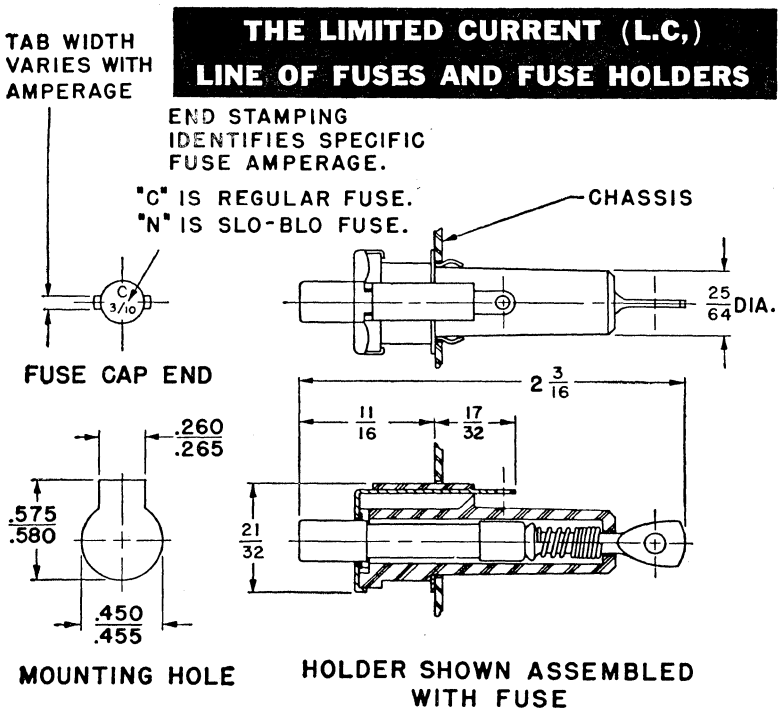
THE LIMITED CURRENT (L.C,) LINE OF FUSES AND FUSE HOLDERS



Here is a completely new approach to circuit protection to completely eliminate the possibility of over-fusing circuits.

This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The fuse post is made to accept only the size amperage range and type (regular or slo blo) in its range. For example: a 1 amp. slo blo fuse is 1¼" long with .115 to .120 width tabs. The holder used with this will only accept a slo blo fuse (N type) above ¾ to 1¼ amps.

The holder is a ruggedly designed unit, molded from high strength bakelite.

It snaps into a predetermined chassis mounting hole and locks into place by means of a quick snap-in type lock washer. It can be pressed into place by hand or simple tools.

The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

Both solder connections are behind panel making the installation of the unit simple and inexpensive.

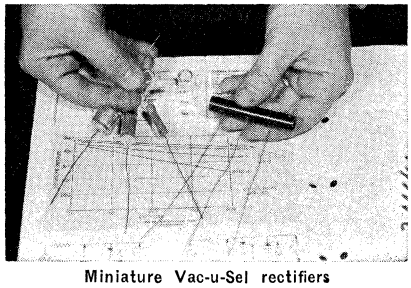
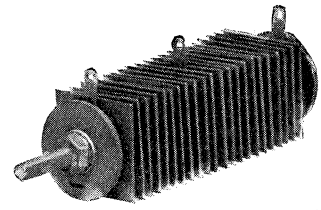
COMPONENT RECTIFIERS

Vac-u-Sel*, COPPER-OXIDE, AND GERMANIUM

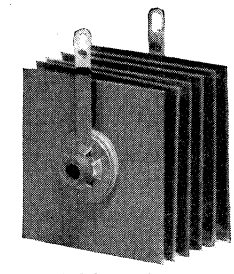
Rectifiers for practically any d-c power requirement are available from General Electric. Vac-u-Sel rectifiers are a new, high-quality type of selenium rectifier produced by an exclusive G-E sphere-type, vacuum-evaporation process. In addition, General Electric also makes a full line of copper-oxide and germanium rectifiers.



Miniature Vac-u-Sel rectifiers



Standard Vac-u-Sel rectifier stack construction



Tube-mounted Vac-u-Sel rectifier stack construction

GENERAL ELECTRIC Vac-u-Sel RECTIFIERS

- 63 VOLT PEAK INVERSE
- 130 C AMBIENT OPERATION
- 80,000 HOURS LIFE EXPECTANCY

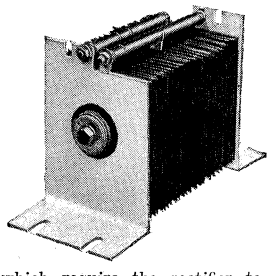
The special vacuum-evaporation process employed in making Vac-u-Sel rectifiers makes possible the outstanding performance characteristic of this selenium rectifier. With G-E Vac-u-Sel rectifiers, you can now match performance requirements for life expectancy, ambient operating temperature, and atmospheric protection, as well as electrical characteristics. Two (2) new rectifier cells make up the new line of Vac-u-Sel rectifiers: a 26-volt and a 45-volt cell. Both are high-temperature cells.

The 26-volt cell is a long-life, standard industrial cell with a life expectancy of 80,000 hours at normal current rating at 35 C ambient. The 26-volt cell can meet operating requirements up to 130 C at full voltage. Current need not be derated where shorter life is acceptable. Life expectancy at 130 C is 1000 hours.

The 45-volt cell has a 63-volt peak inverse voltage. Unlike most 45-volt rectifiers, this is a true, long-life industrial cell. Frequently, this rectifier may be substituted for those employing 26-volt cells. Since fewer cells are required, savings of up to 30 per cent in cost, and up to 35 per cent in the size of the stacks are possible. Life expectancy of the 45-volt cells at normal current rating at 35 C ambient is 60,000 hours, and they can be used at ambient temperatures up to 110 C.

All Vac-u-Sel rectifiers operate with exceptionally low forward-voltage drop and low reverse leakage, and their margin of superiority in these characteristics increases with service. All Vac-u-Sel rectifiers undergo extensive testing and grading, and matched cells are used in assembling stacks. A variety of finishes and mounting arrangements are available to meet virtually any requirements. Write for Bulletins GEA-5935 (miniatures); GEA-6273 (standard).

COPPER-OXIDE RECTIFIER STACKS



G-E copper-oxide rectifier stacks offer these outstanding features:

- No unforming
- Ability to withstand momentary current overloads
- Ability to withstand momentary voltage overloads
- Long life with little aging
- Highest efficiency at low voltages

These features of G-E copper-oxide rectifiers make them especially suited for certain types of magnetizing circuits, which require the rectifier to withstand high current inrush and momentary voltage overload.

Perhaps the most widespread use of copper-oxide rectifiers is in the field of circuit-breaker operation. Here, the unique characteristics of copper-oxide rectifiers are especially important.

The above features also make G-E copper-oxide rectifiers ideal for the following applications: Blocking • Metering • Polarizing relays • High-speed relays • Electroplating • Electrolytic reduction • Telephone and telegraph equipment • Control contactors • Low-voltage, high-current power supplies • Testing equipment • High-voltage surge protectors • D-c welders. Write for Bulletin GEA-5699.

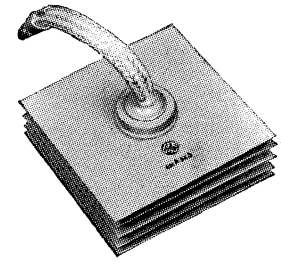
INDUSTRIAL GERMANIUM RECTIFIERS



G-E industrial rectifiers offer these outstanding features:

- Lowest forward drop per ampere pere square inch
- Best current output, smallest size, and lightest weight per watt output of existing metallic rectifiers
- High efficiency
- No unforming
- Negligible aging

These new G-E germanium metallic rectifiers are of the broad-area type. Their very low forward-voltage drop gives excellent regulation. The high output voltage per cell permits the use of fewer cells, and rectifying properties are instantaneous since they do not require artificial forming. G-E germanium rectifiers can be operated at extremely high current densities, and a large d-c output is obtainable from a very small germanium rectifier.

The regulation is less than 6 per cent when operated at the high current densities permissible with germanium rectifiers. With most metallic rectifiers, regulation is usually between 15 and 20 per cent at their normal current densities. Germanium rectifiers have a broad application in power conversion where size and weight requirements are at a premium. Write for Bulletins GEA-5773 (industrial rectifiers); GEA-6224 (power supplies); GEA-6297 (anodizing and electroplating).

Complete information on Vac-u-Sel, copper-oxide, and germanium rectifiers is available from your nearest G-E Apparatus Sales Office, or by writing to Section 640-443, General Electric Company, Schenectady 5, N. Y.

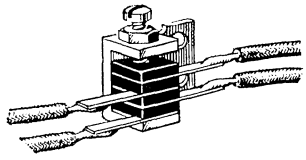
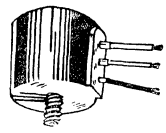
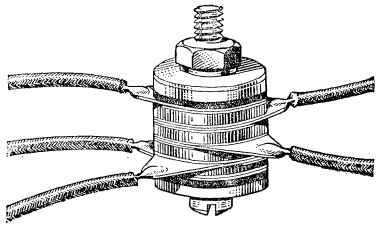
SCHAUER INSTRUMENT RECTIFIERS



TYPE A-4M



TYPE



TYPE C-4

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated —fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3" leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other than 3" can be supplied on special order.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

The values in the table above are those for the conditions of a resistive or inductive load, an ambient temperature of 35° C (95° F), and normal convection cooling with the rectifiers installed with the plates in a vertical position. For operating conditions of higher ambient temperatures and other type loads refer to the derating table at the right.

More and more engineers choose Radio Receptor Selenium Rectifiers for their power applications. Rugged, dependable and highly efficient, these flexible units are giving long and satisfactory service in such diversified installations as the toll gates of N. Y.'s Triborough Bridge, elevators in more than 150 skyscrapers in New York and Chicago and mag-amp regulators used aboard many U.S.N. submarines.

The stacks shown above are those which are normally in stock at your distributor and are adaptable for a wide range of applications. Many other types available for special applications.

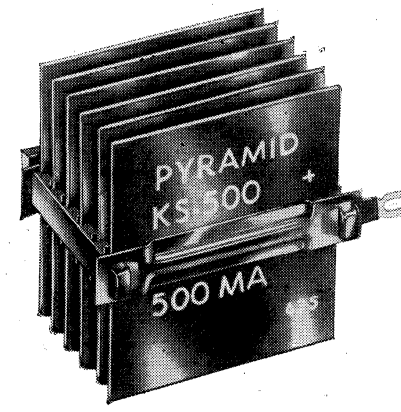
PYRAMID Kool-Sel SELENIUM RECTIFIER



TECHNICAL CHARACTERISTICS

Power supply requirements for every radio, television and instrument use—ranging from small AC-DC receivers to large-screen TV—can be met with available Kool-Sel rectifiers. A summary of the important engineering characteristics of each Kool-Sel type is given on this page. You should consider the use of Kol-Sel components for the following applications:

RADIOS and RADIO-PHONOGRAPHS — Low-cost, efficient rectifiers for radios and radio-phonograph combinations are Kool-Sel KS-65, KS-75 and KS-150. The needs of most 5-tube chassis are met by the KS-65, while the KS-75 and KS-150 are used in sets with larger current requirements.

RADIO ACCESSORIES — TV boosters, UHF converters, phonograph oscillators, intercoms and the like gain compactness and dependability when you use small, cool-running Kool-Sel. Type KS-65 is suitable for most of these uses.

TELEVISION — High-voltage power supplies in television receivers — including color sets — use Kool-Sel rectifiers, Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500. These rectifiers, used in voltage doubler or voltage tripler circuits, provide proper B-plus voltage, eliminating the size, cost, weight and hum problems of power transformers.

LABORATORY INSTRUMENTS, POWER SUPPLIES, AMPLIFIERS — Rectified high voltage through the use of voltage doubler and tripler circuits, for equipment where current requirements run as high as 500ma, may be provided with Kool-Sel rectifiers. Catalog Nos. KS-200, KS-250, KS-300, KS-350, KS-400 and KS-500 will be found useful for laboratory power supplies, DC filament supplies, motion picture projectors, amplifiers, test equipment and other specialized uses.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

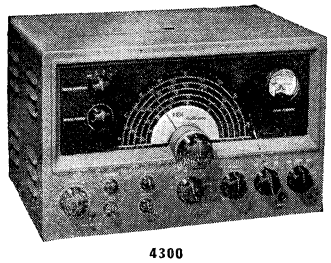
RME COMMUNICATIONS EQUIPMENT



4300

MODEL 4300 RECEIVER

The RME 4300 is a completely new amateur receiver of professional quality incorporating many deluxe features usually found only in higher priced models. Designed specifically for communications on amateur frequencies, the Model 4300 has a large, evenly graduated, illuminated dial covering the following six bands: 1.76 to 2.2 mc; 3.48 to 4.26 mc; 6.98 to 7.32 mc; 13.98 to 14.43 mc; 20.8 to 21.52 mc; 26.95 to 29.8 mc. Smooth, even tuning without backlash is provided by the unique differential, ball planetary type tuning knob with choice of 75-to-1 or 1-to-1 ratios by selection of coaxially mounted rims; triple spaced plates in tuning condenser greatly reduce microphonic susceptibility.

Selectivity control offers four positions; nose of curve is 3 kc wide without crystal filter with attenuation 60 db down seven kc above or below desired frequency. Crystal filter has phasing control for variable rejection of unwanted adjacent signals. High sensitivity of 2 microvolts for 10 db signal-to-noise ratio; excellent image rejection; extremely low noise figure. Temperature-compensated components with heavy steel chassis, sturdy steel cabinet and pressure-cast control panel hold drift to ± .01% for first 20 minutes with zero drift after warm-up. Extreme stability permits single sideband reception with or without adapters. BFO injection control for accurate carrier frequency insertion for SSB operation.

Other features include "S" meter calibrated in steps of 6 db from S1 to S9, plus 10 db units over S9; automatic noise limiter of the peaked type set for 85% modulation, may be switched in and out of circuit; front panel frequency correction control to set frequency exactly at any scale point. Antenna trimmer on front panel permits peak adjustment for different antennas. Smooth acting RF gain control with 6 db attenuation for each 5 degrees rotation; function switch selects receiver operation—MGC-BFO, AGC-AM phone, AGC-SSB, MGC-SSB. Two coaxial jacks provided for addition of Model 4301 single sideband adapter or other adapters; 4-ohm speaker terminals; antenna connections for doublet and Marconi-type; transmitter relay control.

Controls: Dual-speed tuning, AF gain, BFO pitch, BFO injection, antenna trimmer, calibration adjust, band selector, RF gain—on-off, function switch, stand-by—receive—transmit switch, crystal filter selectivity selector, crystal filter phasing-rejector control, ANL on-off. Tubes: 6CB6 RF, 6U8 Det.-Osc., 6CB6 1st IF, 6U8 2nd IF-BFO, 6T8 2nd Det.-ANL-1st AF, 6AQ5 AF output, 5Y3 Rect., OA2 voltage regulator. 117 v. 50-60 cycle AC.

4301

MODEL 4301 SIDEBAND DETECTOR-SELECTOR

The Model 4301 is a new sideband detector-selector which provides outstanding, easy-to-tune SSB reception of both carrier present and carrier suppressed types. Using the cables supplied, the Model 4301 plugs directly into the Model 4300 receiver, forming an attractive, functional addition. Easily connects between the IF and audio stages to any other communications receiver.

Complete with built-in power supply, the Model 4301 has an extremely stable BFO, balanced detector circuit, and accurate phase shift network. Included are adder and subtracter circuits to provide single side reception of either upper or lower sideband separately, double sideband exalted carrier reception or normal receiver operation. Selection is made with panel-mounted rotary switch which provides instantaneous switching between upper and lower sideband with 40 db attenuation of unwanted sideband; this feature improves system selectivity and SNR for standard AM and CW reception as well as SSB.

Controls: Sideband selector, vernier frequency control, on-off switch. Tubes: 2-12AT7, 12AX7, 6AL5, plus selenium rectifier.

T-90 BANDMASTER TRANSMITTER

The T-90 is the result of our long study concerning the operating requirements of most amateurs. Sufficient power to "get out" on all bands, either fixed or mobile, under today's QRM conditions, plus space limitations of the average home, has been the prime objective in its design. The many refinements contributing to smooth and efficient operation which have been incorporated in the T-90, have up to this time been found only in transmitters selling at a much higher price. A close study of the following features will provide convincing evidence that the T-90 is the transmitter YOU WANT for your shack or car.
DIMENSIONS (overall): Cabinet 12⅜" wide, 10½" deep, 6¾" high; weight 17¾ lbs. Factory built and tested complete with tubes, less power supply.

$179.50* Amateur Net

R-9 BANDMASTER RECEIVER

In our further studies of amateur requirements, we found that the ultimate desire of all was to have equipment which "went together." The difficulty of installing odd sizes of cabinets has always been a source of irritation to the neat and efficient operator. The R-9 is physically an identical twin to the T-90. Now at last, without any reservation, you can have fixed station performance either in your shack or in your car. This highly stable all-band double conversion receiver has a versatility and a number of refinements which have never before been offered in such small space. Price is complete with tubes. Dimensions same as transmitter.

$149.50* Amateur Net

MINIATURIZED COMPONENTS

DESIGNED for APPLICATION miniaturized components developed for use in our own equipment such as the 90901 Oscilloscope, are now available for separate sale. Many of these parts are similar in most details except size with their equivalents in our standard component parts group and in certain devices where complete miniaturization is not paramount, a combination of standard and miniature components may possibly be used to advantage. For convenience, we have also listed on this page the extremely small sized coil forms from our standard catalogue. Additional miniature and subminiature components are in process of design and will be announced shortly.

The Oscilloscopes and the Amplifier Sweep

The oscilloscopes in their packaged form are entirely adequate for many laboratory as well as industrial and communication uses. As a transmitter modulation monitor, no additional equipment or accessories are required. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic scope unit can be expanded to serve any conceivable application.

Here again the research engineer is freed of the drudgery of time consuming mechanical construction and other such details of the basic scope before being able to proceed with his specialized work.

The oscilloscopes are designed for standard rack mounting and incorporate mumetal shielding and power supply as well as functional controls.

LABORATORY DELAY LINE STANDARDS

The Millen delay line kit effectively provides a means for the development and design engineer to check the affect of various delays in their actual developmental setups without the time loss and expense of producing separate lines for each trial. Increased requirement for time delay circuits in radar, color television and other modern electronic applications has presented a problem to the design and development engineer as it has been both time consuming and expensive to obtain delay lines for developmental work as each line was necessarily cut to the estimated delay and any change in requirements necessitated the fabrication of a new delay line. The Millen delay line kit is designed to provide a ready means of obtaining various delays from .10 microseconds through 2 microseconds in increments of .05 microseconds except at the extreme ends of this range. The lines may be used repeatedly without deterioration as they are hermetically sealed, the smaller lines in glass tubes, the 1 microsecond line in a metal container.

Each set consists of:

NOMINAL DELAY	TOL.	CALIBRATION TOLERANCE
2—0.10 μs.	± 0.01 μs.	± 0.002 μs.
2—0.25 μs.	± 0.025 μs.	± 0.002 μs.
1—0.30 μs.	± 0.03 μs.	± 0.002 μs.
1—1.00 μs.	± 0.05 μs.	± 0.01 μs.

Actual delay as measured by phase shift method are marked on each delay line. The laboratory calibration of each delay line is accurate to ± 0.002 microseconds on all of the .10 microsecond, .25 microsecond and .03 microsecond lines and ± 0.01 microsecond on the 1 microsecond line. Combination of delay lines supplied makes possible the following delays:

0.10 μs.	0.55 μs.	1.10 μs.	1.55 μs.
0.20	0.60	1.20	1.60
0.25	0.65	1.25	1.65
0.30	0.70	1.30	1.70
0.35	0.75	1.35	1.75
0.40	0.80	1.40	1.80
0.45	0.90	1.45	1.90
0.50	1.00	1.50	2.00

Characteristic impedance — 1350 ohms ± 20%.

PHYSICAL DIMENSIONS:

0.1 μs.—$\frac{15}{32}$" dia. x 4⅛"l ong
0.25 μs.—$\frac{13}{32}$" dia. x 7⅝" long
0.30 μs.—$\frac{13}{32}$" dia. x 7⅝" long
1.00 μs.—4¾" x 4¾" x 1"

All seven lines are mounted in a metal case 9½" x 5" x 1¾" for convenience in storing and safety in handling.

Delay Lines and Networks

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Millen distributed constant line is available as bulk line for laboratory use and in either flexible or metallic hermetically sealed units adjusted to exact time delay for use in production equipment. Lump constant delay networks may be preferred for some specialized applications and can be furnished in open or hermetically sealed construction. The above illustrates several typical lines of both types. Our engineers are available to assist you in your delay line problems.

Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter completely calibrated for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The calibration while adequate for general usage is not as complete as in the case of the industrial model. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and interminal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is not available. Compactness has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 inch General Electric instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting polystyrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

The Grid Dip Meters may be used as:

1. A Grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 5/16 in. x 3 3/8 in.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90605 thru 90609 are extremely small and designed primarily for engineering laboratory use where they will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

EXPLANATION OF TYPE NUMBERS

The first portion of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter "D" indicates a two-section type—"A" differential, "B" butterfly. The final number multiplied by 100 is the approximate peak breakdown voltage.

TYPE "M" CAPACITORS

Requiring a panel area just 5/8" wide by 3/4" high, these diminutive capacitors provide the perfect answer to problems encountered in the design of compact radio frequency equipment. Bridge type stator terminal provides extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Relatively large beryllium copper compression spring rotor contact provides steady torque—rotor stays "put" where set. Rotor contact nickel plated—all other metal parts nickel plated. Steatite end frames DC-200 treated. Mounting bushing threaded 1/4"-32 with flats to prevent turning—mounting nut furnished. Peak voltage 1250 volts on .017" spaced units—850 volts on 160-130 which is spaced .013"—3/16" diameter shaft* slotted for screwdriver adjustment. JOHNSON Miniature Air Variables are available in production quantities with the following features: 1. Locking bearing. 2. 180° stop. 3. Various shaft extensions. 4. High torque. 5. Silver or other platings.

*Instrument type tuning knob to fit 3/16" shaft available. (See knob and dial section of this catalog.)

TYPE "J" CAPACITORS

A heavy duty miniature type, has wider spacing (.025") than most small air variables, yet occupies little more space. Useful for small space plate tank circuits in low power stages where standard miniatures have insufficient plate spacing. Soldered plate construction. 6-32 tapped mounting studs on ¾" centers. Mounting brackets and 6-32 screws provided.

JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials, derived from a new basic knob design. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all molded parts (meets MIL-P-14). Metal dial scales have an etched satin chrome finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered metal inserts for 1/4" shafts except 116-214-2.

Variations available, such as special shaft sizes, scales or indicators in production quantities.

TUBE SOCKETS

A new standardization program calculated to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements has been instituted recently. By reducing the number of variations in special socket types, it will permit the maintenance of stocks of military and industrial types as well as standard sockets and provide shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are as follows:

BAYONET SOCKETS—GENERAL SPECIFICATIONS

Standard (designated -1) A commercial grade socket suitable for general requirements. Porcelain bases, glazed top and sides—phosphor bronze contacts, cadmium plated .0002. Nickel plated hardware. Bayonet shells are etched aluminum.

Industrial (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Phosphor bronze or beryllium copper contacts, .0005 silver plated. Aluminum bayonet shells, iridite No. 14 treated. Fungus resistant cushion washers under contacts.

Military (designated -200) Top quality for military requirements. Glazed L4 steatite bases, DC200 treated. Beryllium copper contacts .0005 silver plated. Hot tin-dipped terminals—brass bayonet shells, .0003 nickel plated. Threaded hardware .0002 nickel plated, unthreaded hardware .0003. Fungus resistant cushion washers under contacts.

WAFER SOCKETS—GENERAL SPECIFICATIONS

Standard (designated -1) A commercial grade socket suitable for general requirements. Glazed steatite base is DC200 treated—contacts are of plated brass with steel springs. Etched aluminum shields on shielded types.

Industrial (designated -100) Superior in quality to Standard types, Industrial types have glazed steatite bases, DC200 treated. Contacts are phosphor bronze with beryllium copper springs .0005 silver plated. Shields on shield types are iridite No. 14 treated aluminum. Fungus resistant cushion washers under contacts.

Military (designated -200) Top quality for all military requirements. Glazed steatite bases, DC200 impregnated. Phosphor bronze contacts and beryllium copper springs silver plated .001—hot tin-dipped solder terminals. Fungus resistant glass base melamine cushion washers iridite No. 14 treated aluminum shields on shielded types. Entire socket protected for 200 hour salt spray test.

Write for your copy of Standardization Booklet 536, containing complete information on Johnson tube sockets for commercial, industrial and military applications.

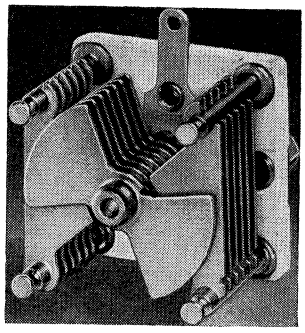
STANDARD VARIABLE CAPACITORS



"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

"MAC" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered to achieve the smallest dimensions practical to meet the requirements of a miniaturized component.

	CAPACITY*		
CODE	Max.	Min.	PLATES

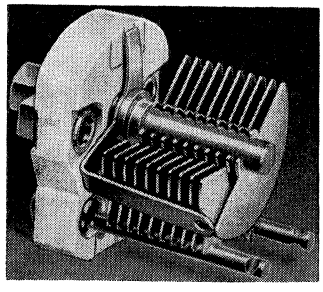
"APC" CAPACITORS



FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

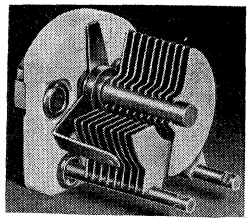
Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with ½″ extended shaft for knob control or shaft coupling. "APC-C" Lock Type now also available through distributors. Air Gap is 0.015″ nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS



FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

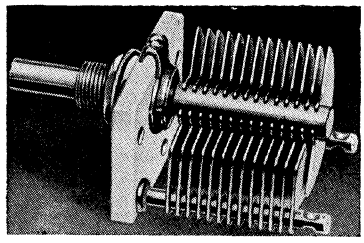
STANDARD VARIABLE CAPACITORS



"HFA" and "HFBD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but other incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

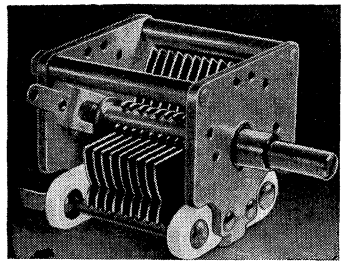
SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

"RMC" CAPACITORS



FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated beryllium copper spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC." Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods.

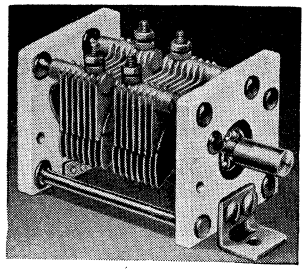
SPECIFICATIONS—Straight line capacity. Air gap is 0.0245″ nominal. Tested at 1000 V. R.M.S., 60 cycles.

"VU" CAPACITORS



FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approache sa straight line frequency curve as indicated by nominal values in table. Air gap is .0168″ nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

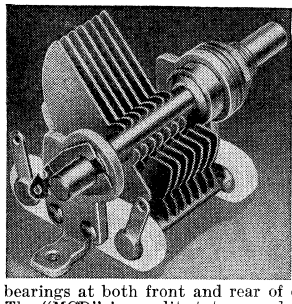
HAMMARLUND

STANDARD VARIABLE CAPACITORS



"MC" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base monuting. A rotor stop permits 180° clockwise rotation for increasing capacity. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. For optimum performance all Hammarlund "MC" capacitors have silver plated beryllium copper wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver plated beryllium copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

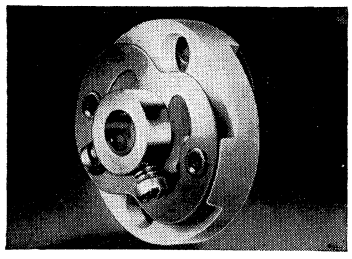
HAMMARLUND

STANDARD VARIABLE CAPACITORS

"FC" and "FNC" COUPLINGS

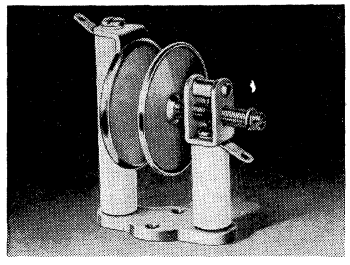


FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistant with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

STANDARD STOCK TYPES

CODE FC-46-S	Insulated flexible coupling
CODE FNC-46-S	Non-insulated flexible coupling



"NZ-10" CAPACITORS

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS — Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

RELAYS USING VACUUM SWITCHES

Type R and RH Vacuum Switches are available from Jennings mounted as relays for indoor use. They may be mounted with contacts normally open or normally closed or two switches may be mounted in a single pole double throw arrangement. Either ac or dc solenoids may be used. Insulation between the switch and its actuating solenoid is provided by a 2 to 8 inch puller rod providing 40 to 100 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use; Grade G7 silicone glass laminate or alumina ceramic is recommended for radio frequency applications.

VARIABLE TOROIDAL INDUCTORS

Now the advantages of the Rotoroid principle of inductance variation — simplicity, stability, linearity, and high "Q" — can be realized economically in the numerous applications where toroid with a limited variation of inductance is desired. Using similar construction to the Rotoroid, the Adjustoroid allows a total inductance variation of approx. 10%.

B.I.F. (Band Pass Interstage Filters)

This series of interstage band pass filters will be of interest to project and design engineers to whom the time required for specially designed filters is prohibitive. A stock supply will be maintained for most commonly used center frequencies** between 60 and 50,000 cycles. The filter is designed to operate between the triode plate and the grid of a tube and provides a voltage gain of approximately 6DB. Filters are hermetically sealed. Small size permits use in compact or even miniaturized equipment. Dimensions are $1\frac{3}{16}$" x $1\frac{11}{16}$" x $2\frac{1}{4}$". When ordering, specify BIF .....Cycles.

B/W = ±3% — Z IN = 10 K ohms

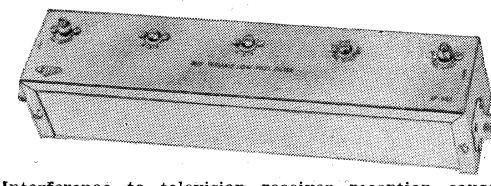
FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises or similar sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

LF-601 LOW PASS FILTER



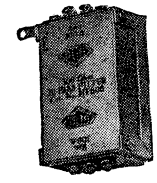
Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 85 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 52 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

Catalog No.	Dealer Cost
LF-601	$14.85

HF-600 HIGH PASS FILTER



The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3¼" x 2⅛" x 1⅛".

No additional coils are needed as the one coil does the work on all bands. It can be used as a **Wave-Meter, a Monitor, a Field Strength Indicator, a Carrier Shift Indicator** and a sensitive **Neutralizing Instrument.** Operating instructions supplied with each unit.

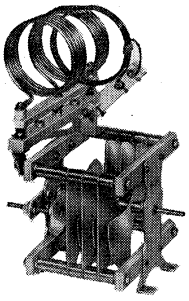
CONDENSERS

BUTTERFLY TRANSMITTER CONDENSERS



These Butterfly condensers are unequaled for mechanical and electrical balance in push-pull amplifier circuits. Where space behind the panel will not permit the use of our Giant or Master condensers, these dual condensers are ideal.

Rotor and Stator plates are made from .062″ thick, highly polished aluminum with all edges rounded and surfaces highly polished to minimize corona loss and danger of peak voltage flash-over Steatite bars are used as insulators.

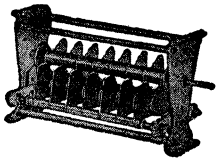
These condensers are so designed that a pair of single plate neutralizing condensers can be fastened to the end plate. Brackets for mounting coil jack bars are furnished with the condensers. All condensers that have an air gap of .5″ are furnished with brackets for kilowatt coils and the condensers that have .3″ air gap are furnished wih brackets for the mounting of 500 watt coils. The height of the condensers is 6¼″ and the width is 7″.

.500″ air gap available in 25 mmfd., 38 mmfd., 54 mmfd., 70 mmfd. and 86 mmfd. capacities.

.300″ air gap available in 31 mmfd., 51 mmfd., 71 mmfd., 92 mmfd. and 114 mmfd. capacities.

For pricing information write our factory since these are custom built units.

GIANT TRANSMITTER CONDENSERS



BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16″ thick aluminum end plates, connected by ⅝″ diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from **0.064″** thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

Available in both single and dual section.

In single section: .250″ air gap available in 195 mmfd., 345 mmfd. and 530 mmfd. capacities. .500″ air gap available in 55 mmfd., 95 mmfd., 150 mmfd. and 255 mmfd. capacities. .750 air gap available in 50 mmfd., 75 mmfd., 110 mmfd. and 160 mmfd. capacities. 1″ air gap available in 55 mmfd., 85 mmfd. and 105 mmfd. capacities.

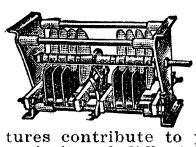
MASTER TRANSMITTING CONDENSERS



All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

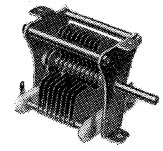
JUNIOR CONDENSERS



Electro-soldered plate assemblies are featured in the construction of these condensers. This assures correct plate spacing, overall rigidity and light weight. Losses are reduced to a minimum by this method of assembly. End plates are rigidly constructed. The frame has formed angles on top and bottom for mounting the condenser in any position which allows associated tuning inductance to be mounted on the condenser frame. The edges of the brass rotor and stator plates are rounded and the assemblies are cadmium plated. Alsimag insulation is used throughout. Large surface front sleeve bearing and ball and cup rear bearings provide constantly smooth operation. A two finger spring brass pressure contact wiper assures noise-free and positive rotor contact at all times. The low minimum capacities of these units make them especially suitable for multi-band applications where a high ratio of maximum to minimum capacity is desired.

Available in both single and dual section.

In single section: .051″ air gap available in 50 mmfd., 100 mmfd., 145 mmfd., 250 mmfd. and 340 mmfd. capacities. .078″ air gap available in 25 mmfd., 55 mmfd., 110 mmfd., 150 mmfd., 190 mmfd. and 245 mmfd. capacities. 1.144″ air gap available in 20 mmfd., 55 mmfd., 80 mmfd. and 105 mmfd. capacities. .175″ air gap available in 18 mmfd., 40 mmfd., 55 mmfd. and 100 mmfd. capacities.

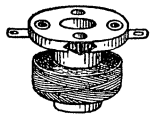
R. F. CHOKES - COUPLINGS

LATTICE WOUND R. F. CHOKES



For all general purpose applications requiring a high quality choke at a reasonable price, this line finds wide acceptance. Each choke is wound from silk-covered enameled copper wire on a white ceramic bobbin. Leads are terminated with two convenient soldering lugs. Chokes can be mounted with a 6-32 screw through the center of the form, and each winding is thoroughly impregnated against moisture. The wide range of sizes fills practically every choke requirement in standard radio circuits. Choke base diam. 1-1/16". distance between ends of leads 1⅝"

TRANSMITTING CHOKES

Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot. **All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.**

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3¼".

IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1⅜" x 1⅜" x 1-7/16".

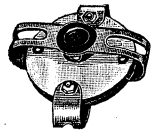
BUD HIGH VOLTAGE FLEXIBLE COUPLINGS



A new type spring construction in these couplings permits a wide gap between shaft connections, freedom from back-lash, and unusual flexibility. The springs are attached to glazed Steatite discs 1½" in diameter and 3/16" thick, and the overall diameter of the finished coupling is 1-15/16". Coupling accommodates standard ¼" shaft.

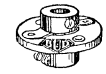
BUD INSULATED FLEXIBLE COUPLINGS



Tandem operation of two or more units is readily accomplished through the use of these couplers. Direct shaft alignment is not essential, and all couplers are made to fit ¼" shafts.

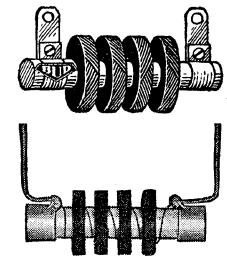
PIE WOUND R. F. CHOKES



Each choke has a continuous winding of silk covered enameled copper wire and the pies constituting this winding are wound on a ¼" diameter ceramic core. Chokes are made with both strap and wire leads. The CH-876 is a heavy duty choke intended for circuits, such as transmitter plate circuits, where high currents are present. All chokes in this series have an overall length of 1½".

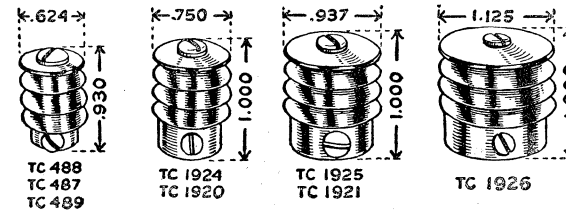
HEAT RADIATING PLATE AND GRID TUBE CONNECTORS



Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

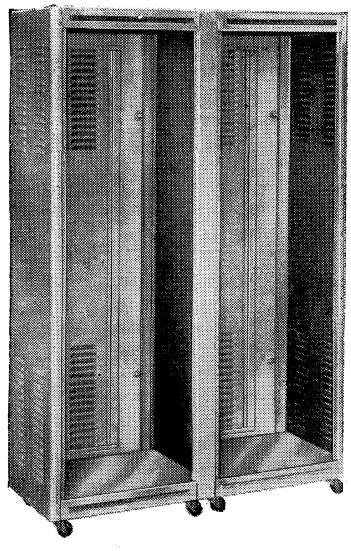
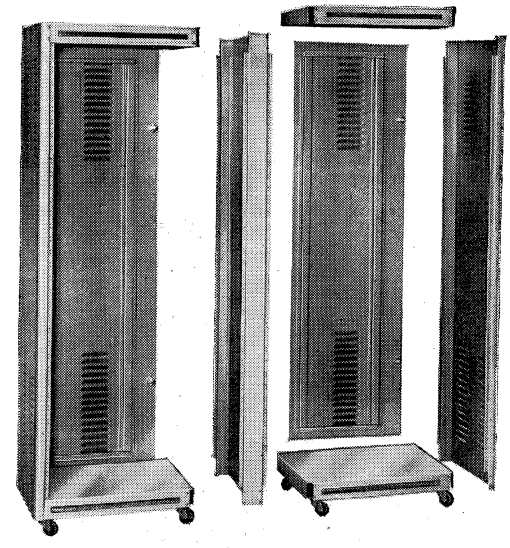
RELAY RACKS—CABINET RACKS

ADD-A-RACK SERIES



A



B

It always has been necessary to buy special racks without louvres on one side to obtain maximum interior space with a minimum of floor space. Now, you no longer need to buy an entire new cabinet when you want additional space. When multiple rack units are required, we not only offer additional racks at a lower cost, but provide a sturdier, better looking assembly. Only Add-A-Rack series can accomplish this savings.

Illustration A shows the two Add-A-Rack cabinets assembled together. Illustration B shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entirely new outfit, you purchase, as a unit, four parts: 1. The door, 2. the top, 3. the bottom, 4. an Add-A-Rack Coupling Unit. The right or left side of your present relay rack is removed and replaced by the Add-A-Rack Coupling Unit. Next, the top and bottom are fastened into place. The side taken from the first rack is then fastened onto the second rack. Place the additional door into position and you now have two racks, properly and efficiently coupled together. In the same simple way, more racks can be added at any time. Every one will be in a continuous one piece assembly.

DELUXE CABINET RACKS

These cabinet racks are so made that a professional appearance is given. They are ideal for commercial broadcasters, for sound equipment or test equipment.

The five larger sizes have a hinged rear door, while the smaller sizes have the welded panel in the rear.

Adequate ventilation is assured by means of louvered sides and a 2½" opening in the bottom of the back, which extends the entire width of the cabinet. "No scratch" extended metal feet are embossed on the bottom to minimize marring of the table top or any other equipment that this is placed on.

SPECIAL SHEET METAL FABRICATION

Now, Bud Radio, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined, and new methods have been developed.

We make over four hundred different sheet metal products as stock items, which are illustrated elsewhere in this catalog. Often a slight change in one of our standard items will eliminate the necessity of special tools and dies, thereby reducing costs greatly. Since we produce thousands of sheet metal products, every month, for ourselves and for leading firms throughout the country, we are able to effect economies in production which mean lower prices and faster delivery.

Our expanded facilities, expert workmanship, years of experience and manufacturing "know how" assure high quality products. In addition, our Engineering Staff is always available for consultation and advice. We suggest that you send us your blueprints for estimate.

Whether the quantity be one, ten, one hundred, one thousand or many thousands, we are interested in the opportunity to be of service to you.

Illustrated on this page are a few examples of specially fabricated sheet metal products.

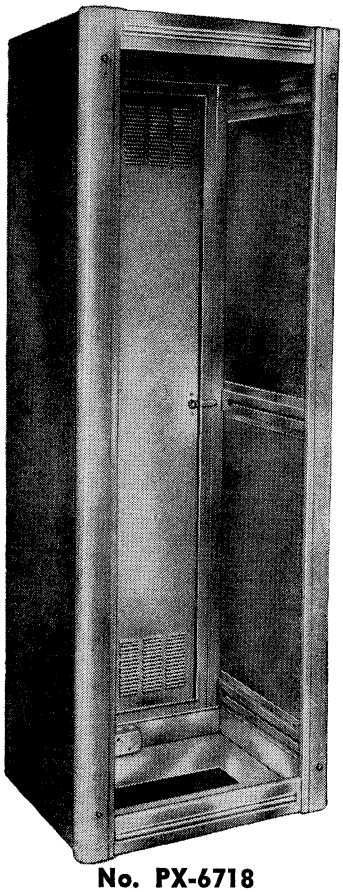
TYPE "C" UNIVERSAL CABINET RACKS

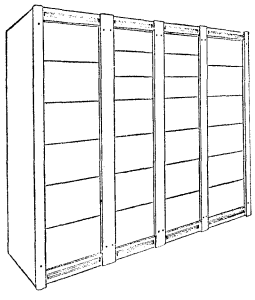
TYPE "PX" AND "FX" SERIES RACKS FOR 19" & 24" WIDE PANELS—18" & 24" DEEP

PAR-METAL ELECTRONIC HOUSINGS

WITH REAR DOOR ONLY



No. PX-6718



In this group are shown our standard "PX" type racks, 24" deep. The racks at the end positions are for 24" wide panels, and 19" wide panels are used on the two center racks. Regular width vertical trim strips covering the panel mounting screws are used in this arrangement.

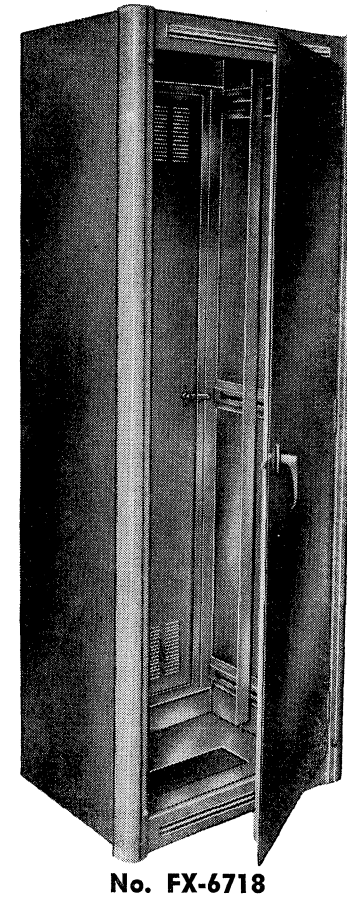
Similar groupings could be made using "PX" racks of the same height in 18" or 24" deep racks, using 19" or 24" wide panels. All of the racks in this group have solid sides.

These **Universal Cabinet Racks** are similar in construction to our standard Type "C" Racks, except that the design has been modified to facilitate the location and mounting of chassis supports, sliding shelves, and standard sliding devices. In addition, all racks, **with** and **without** front doors, have adjustable panel mounting angles, which may be positioned on the sides of the racks from front to back.

You now have available a complete line of cabinet racks similar in design, **with** or **without** front doors, with **open** or **closed** sides, which can be used **singly** or **grouped** together in continuous rows. Where racks with solid sides of the same height are used, they may be set up and intermixed for 19" and 24" panels, with rear doors only, or with front and rear doors; the racks are available for 19" wide panels, in 18" and 24" depths, and for 24" wide panels in 24" depths. The same group arrangement can be made with racks with open sides on Pages J-92 and J-93.

All racks with rear doors only are equipped with regular vertical trim strips to cover the panel mounting screws. However, where sliding drawers and custom assembled sliding chassis are used, these standard trims will interfere with the operation of such drawers. To overcome this difficulty, optional **"Narrow-Type"** vertical trims (same as racks with front doors) are available which permit free operation of sliding drawer equipment. Although such trims expose panel mounting screws, they do maintain the conventional appearance of these racks. Vertical corners of the rack proper are full cabinet design, so the edges of panels are recessed with trims removed.

WITH FRONT & REAR DOOR



No. FX-6718

The grooved bolt retainers on the sides of all racks, which are primarily used for adjusting the position of panel mounting angles, also serve as a means for bolting the Vertical Side Supports shown on Page J-94. To these side supports may be attached chassis brackets, shelves, slides, etc., as described on that page. Other **arrangements** which can be made with our **"FR" or "PR" (Detachable Type)** Cabinet Racks are shown on Page J-92:

Advantages of "UNIVERSAL" Type Racks may be summarized as follows:

1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19" or 24" wide panels may be used singly, or in rows, intermixed as required.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see Page J-94) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. **Available finishes are black or grey ripple enamel, primer coat only, grey hammertone or aluminum grey lacquer.**

PLEASE SPECIFY FINISH DESIRED WITH YOUR ORDER, THANK YOU.

TYPE "C" UNIVERSAL CABINET RACKS

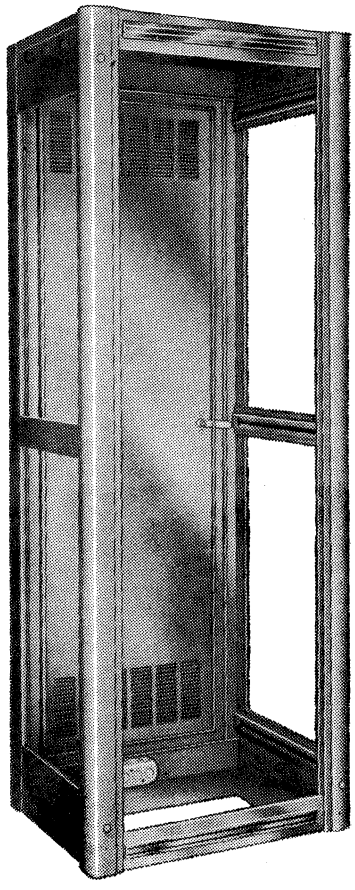
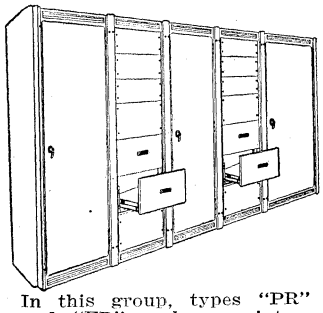
TYPE "PR" & "FR" SERIES RACKS FOR 19" & 24" WIDE PANELS — 18" & 24" DEEP With Open Sides and Detachable Side Panels

WITH REAR DOOR ONLY



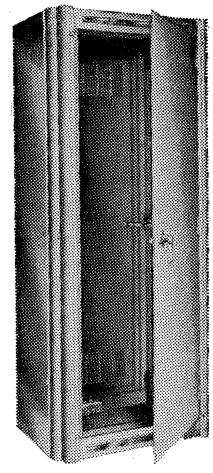
No. PR-6718



In this group, types "PR" and "FR" racks are intermixed.

Racks for 24" wide panels are used on the ends, whereas the three center racks are for 19" wide panels. Three of the racks have front as well as rear doors. The position of the racks can be interchanged as desired.

Similar groupings can be made with our "PX" (Solid Sides) Cabinets as illustrated on Page J-90.



This Cabinet has Detachable Side Panels mounted.

These **UNIVERSAL CABINET RACKS** are similar to those listed on the preceding pages except that they are constructed with OPEN SIDES and DETACHABLE SIDE PANELS. The illustrations at the left and right show how these units look with the side panels removed; the illustration above shows an FR Type Rack with the detachable side panels in place.

In the price list on the opposite right-hand page (Page J-93), you will note that the last two columns list the matching detachable side panels; prices are **per pair.** The illustrations below are typical assemblies of multiple installations; many others are possible.

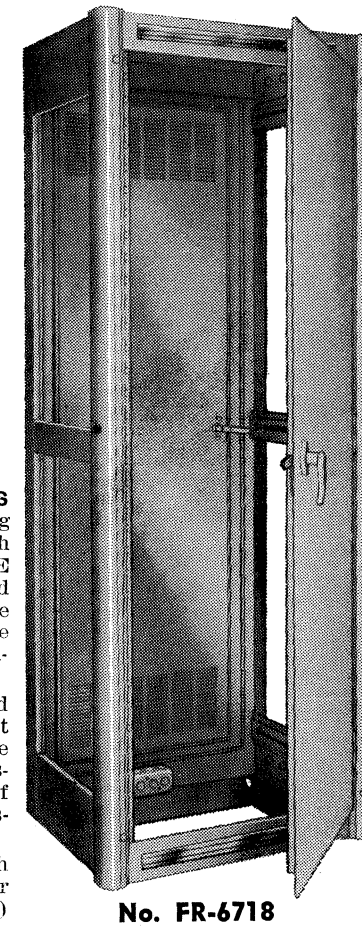
UNIVERSAL CABINET RACKS (with detachable side panels as shown herewith, or with solid sides — on preceding pages) facilitate the location and mounting of chassis supports, shelves, sliding shelves, and standard sliding devices. Panel mounting angles may be positioned at the sides of the racks at any location from front to back.

Advantages of **"UNIVERSAL"** Type Racks may be summarized as follows:

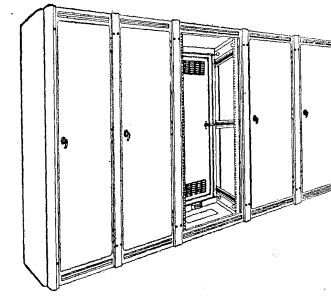
1. A complete line of racks to provide unit row type assembly, or for use as single racks.
2. Racks with or without front doors, for either 19" or 24" wide panels may be used singly, in rows, or intermixed.
3. The panel mounting angles on ALL racks are fully adjustable, and may be set at any position from front to back.
4. Vertical Side Supports (see Page J-94) for attaching chassis brackets, shelves, slides, etc., may be installed without drilling or fitting.
5. Either regular or "Narrow Type" vertical corner trims are available without additional cost.
6. A simplified method is provided for installing standard or custom-built slides.
7. **Available finishes are black or grey ripple enamel, primer coat only, grey hammertone or aluminum grey lacquer.**

PLEASE SPECIFY FINISH DESIRED WITH YOUR ORDER. THANK YOU.

WITH FRONT & REAR DOORS



No. FR-6718



This typical group consists of racks with open sides, using types "PR" and "FR" racks intermixed. Narrow trim strips are used throughout, because racks with front doors are in the assembly.

If "PR" racks (with rear doors only(were in the group exclusively, either regular width or "narrow" type trims could be installed at your option. Detachable side panels are installed on the end racks.

It is often necessary to mount groups of 2 of our type "C" enclosed racks on roller trucks. The truck illustrated above is used for that purpose. They are similar to our heavy duty trucks (page J-101), except that they have been reinforced with heavier steel because of their greater length.

They are supplied with 6 - 3" diameter wheels with heavy duty type casters. Due to the numerous possible sizes, we are unable to list prices, but they are available upon receipt of your requirements. SLIDING SHELF UNITS

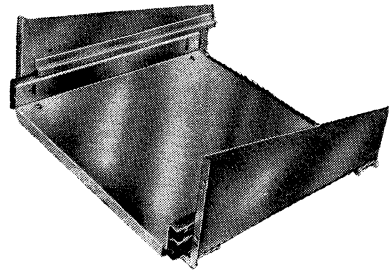
These sliding shelves may be mounted on all of the relay racks listed by us, as they are screw mounted to the front panel mounting angles, the same as regular panels.



Basic Slide Assembly SD-1916

The basic assembly illustrated is sold as a complete unit. Chassis may be bolted directly to the sliding shelf; panels may be attached to the shelf using standard chassis brackets listed on Page J-105. Formed panels with a minimum height of 7" are recommended.

The forward movement of shelves for 18" deep racks is 13¼"; for 24" deep racks, it is 17¼". The shelf may be quickly removed from the slide while it is in an extended position.

The illustration shows a sliding shelf unit with the slide carrier in a vertical position. This type affords the maximum load capacity, but reduces the usable shelf space to 15⅝" wide. The shelf height is only 1".

We also list shelves with slide carriers mounted horizontally under the shelf. This method permits the use of 17" wide chassis, but reduces the load capacity. The shelf height is increased to 1¾". All parts on both types are zinc plated.

TYPE "C" DELUXE CABINET RACKS

FOR 19" WIDE PANELS - 18½" & 24" DEEP

THESE RACKS will appeal to those who desire to combine rugged construction with modern styling and improved design. Combining furniture steel with dependable workmanship and careful attention to mechanical detail, they have been adapted to a wide range of requirements in the electronic industry.

The design of the vertical posts permits these racks to be installed in rows or "gangs," without the use of front joining strips between the racks. This provides a greater flexibility in their installation, particularly in broadcast stations.

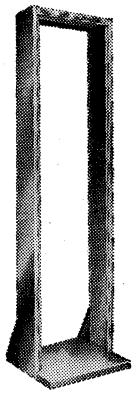
TYPE "A" CHANNEL RELAY RACKS

FOR 19" WIDE PANELS

DELUXE TYPE



No. RR-197

OUR NEW DELUXE CHANNEL TYPE RELAY RACK extends the utility and applicability of the standard channel relay rack.

The panel space has been changed to 77"x19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10-32 screws at **both front and back** permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The **full** panel space of 77"x19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6¾". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on Page J-105. When such chassis are mounted at the back, the addition of standard or hinged type panels (see Pg. J-102) will make a rack enclosure with a clear depth of 6¾". The top cross-brace is provided with a grille for ventilation where needed.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

CATALOG No. RR-197:

Overall Dimensions: 80⅜" high, 21⅛" wide, 20" deep

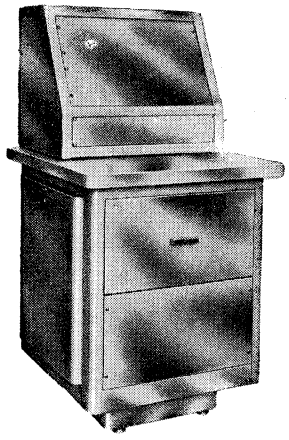
UTILITY DESK ASSEMBLIES

Standardized Units Adaptable to Individual Requirements

General Description



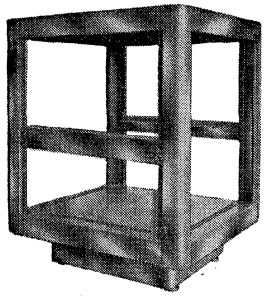
SINGLE UNIT ASSEMBLY

The combination of a control cabinet mounted on a table, desk or similar support has been in general use in the electronics industry for some time. Due to the various functions for which it may be employed, such equipment has assumed various forms, arrangements and sizes, requiring costly, custom-built construction to achieve their purpose.

While it is obvious that no particular fixed design can serve every demand, we have devised a group of ***standardized units,*** the combination of which is readily adaptable for control stations, testing apparatus, sound distribution systems, and similar applications.

The ***line drawing on the opposite page*** is a composite view of a complete equipment in which have been grouped various available components. Essentially, it consists of a desk cabinet or turret, a 71" long table top, and two pedestals. Other arrangements include a 51" long table top, a pedestal and end table support, and a smaller desk cabinet; where a single pedestal only is needed, a 25" wide table top and suitable desk cabinet is listed.

The sizes and specifications of the various units are catalogued on the following pages. There are several features which warrant your consideration, particularly the pedestal. Note that all doors of the pedestal are easily removable, allowing complete access to the interior ***from all sides.*** (See illustration at left.) Each side of the four supporting posts has also been drilled and tapped on "universal" centers, making it possible to mount standard rack panels or doors on any or all sides, at your preference. Each door is equipped with a "push-button" spring catch, plus a lock with interchangeable keys. The use of the lock is optional.



The above illustrates how brackets are mounted. They are used for mounting chassis, standard shelves, or drawers. With all sides open, easy access saves considerable time in assembly.

Another time-saving aid is the method of supporting apparatus in the interior of the pedestal. Universal brackets are easily attached to any of the four sides by utilizing the tapped panel mounting holes. The brackets are slotted, so that almost continual vertical adjustment may be made. They may be used to support regular 17" wide chassis, or standard shelves. The shelves are suitable for mounting amplifiers, power supplies, record changers, etc.

All table-tops have screw type studs, which are inserted in matching holes already drilled in the pedestals. The desk cabinets have necessary mounting holes, but they have been omitted from the table top to permit a flexible assembly of similar cabinets, or other equipment.

SPECIFICATIONS: The Desk Panel Cabinets, Table Tops and Pedestals are constructed of 1/16" thick furniture steel. They are rigidly braced and reinforced wherever necessary, and substantially welded into integral units. No holes have been drilled in the table tops for desk cabinets, to permit cabinets to be located wherever desired.

FINISH: Unless otherwise specified, the standard finish for all items on Pages J-106 thru J-109 is medium grey enamel. Black wrinkle, slate grey wrinkle, grey hammertone, or prime coat only is available at same price. Samples of above finishes will be mailed upon request.

WYCO METAL PRODUCTS EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.

B. Figure "A" shows two Expand - A - Racks joined together.

C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.

D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.

E. Supports are electronically welded to the bottom to receive our casters (#RC-100).

F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.

G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

WYCO METAL PRODUCTS SLOPING PANEL SUPPORT

DESCRIPTION:

In answer to many requests from engineers within the industry, WYCO METAL PRODUCTS presents the all-new SLOPING PANEL SUPPORT. As indicated in figures "A", "B" and "C", the SLOPING PANEL SUPPORT allows for mounting of the standard 19" panel in sloping position. This enables the engineer or equipment user to more easily view the rack mounted instrument panel. From these illustrations, it is easy to see that the SLOPING PANEL SUPPORT offers a variety of positions in which a standard 19" panel may be supported in sloping position. The SLOPING PANEL SUPPORT is fabricated of heavy gauge steel and is finished in Black and Grey Wrinkle or Silver Grey Hammertone.

IMPORTANT! When ordering SLOPING PANEL SUPPORTS FOR CABINET RACKS THAT HAVE FRONT CORNER VERTICAL TRIM, use catalog prefix 'B". In all other cases use catalog prefix "G".

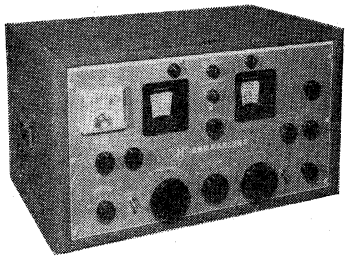
HAMMARLUND

COMMUNICATIONS RECEIVERS

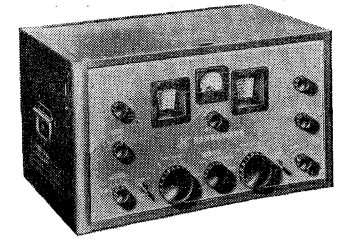


NEW HQ-150 COMMUNICATIONS RECEIVER

A new superheterodyne communications receiver in the medium price class featuring built-in Q-multiplier and a 100 KC crystal calibrator. The HQ-150 covers a continuous range of frequencies from 540 KC to 31 MCS, or from 555 meters to 9.7 meters in six bands. Circuitry and tube line-up are the same as the famous Hammarlund HQ-140-XA.

The HQ-150 has extremely high sensitivity and selectivity, plus outstanding frequency stability and image rejection. New, fully illuminated, expanded scale panel meter is incorporated for easier, more accurate readings.

HQ-140-XA COMMUNICATIONS RECEIVER



An improved version of the famous HQ-140-X. A superheterodyne type receiver that provides all the advantages of modern design and circuitry for the ham and short wave listener. Extremely high degree of sensitivity and selectivity plus improved frequency stability and image ratio. Covers a continuous range of frequencies from 540 KCS to 31 MCS, or from 555 meters to 9.7 meters in six bands.

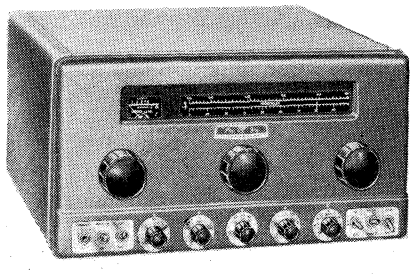
Band spread tuning is supplied on the four higher frequency bands, with actual calibration in the 80, 40, 20, 15, and 10 meter amateur bands. The outstanding noise limiter and special Hammarlund patented crystal filter reduce noise and interference.

FEATURES

Tuning Ranges: 0.54 - 1.32 MCS, 1.32 - 3.2 MCS, 3.2 - 5.7 MCS, 5.7 - 10 MCS, 10 - 18 MCS, and 18 - 31 MCS.

Calibrated Band Spread: 3.5 - 4 MCS, 7 - 7.3 MCS, 14 - 14.4 MCS, 20.9 - 21.6 MCS, and 28 - 30 MCS.

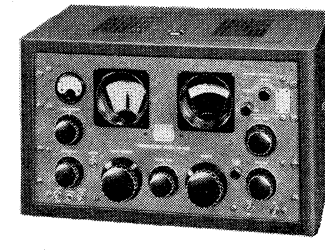
Tube Line-Up: 6C4 Oscillator, 6BA6 RF Amplifier, 6BE6 Mixer, 6BA6 1st IF Amplifier, 6BA6 2nd IF Amplifier, 6BA6 3rd IF Amplifier, 6AL5 Combination Detector and AVC Noise Limiter, 12AU7 1st AF Amplifier and BFO, 6V6GT/G Audio Power Output, OC3/VR105 Voltage Regulator, and 5U4G Full Wave Rectifier.



PRO-310 COMMUNICATIONS RECEIVER

A beautiful receiver in all respects—appealing in looks and listening. The PRO-310 employs modern etched circuits and plated circuits in the RF section. Ideal for either ham or professional user. All frequencies can be read to 0.05%. Bandspread is continuously calibrated over the entire range from 540 KCS to 35.5 MCS. Exalted BFO and sharp selectivity are built in for SSB operation. Modern circuits and components result in exceptional stability. High image rejection is achieved on all six bands. Double conversion is used on the top four bands. A rugged, sectionalized turret is employed for bandswitching. All operating controls are located for easy, quick and accurate operation.

SP-600-JX COMMUNICATIONS RECEIVER



The world-famous Hammarlund SP-600-JX receiver is a professional-type for the ham who wants the very finest. Six bands cover the frequency range from 540 KCS to 54 MCS. The SP-600-JX is a 20-tube, dual conversion superheterodyne. Operation of any of the six crystal-controlled fixed frequency channels within the range of the receiver is immediately available. Perfect as a point-to-point or network receiver: Pre-arranged day and night fixed frequencies. Crystal control permits instantaneous selection of desired channels. Stability is 0.001% to 0.01% depending upon frequency. Image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. Sensitivity is 1 uv cw and 2 uv am, while selectivity for the three non-crystal ranges is from 200 cps to 13 KCS. Radiation is negligible with no cross-talk in multi-receiver installations.

BASIC SYNCHROS & SERVOMECHANISMS
by Van Valkenburgh, Nooger & Neville, Inc.

There are hundreds of thousands of synchros and servos in operation today! In addition to wide use in the military, aeronautical, and maritime fields, synchros and servos perform an ever-increasing variety of tasks for industry . . . faster and more accurately than is possible manually.

They produce and control rotary motion from a distant point . . . direct the flow of liquids into preselected channels . . . operate remotely located valves for mixing purposes . . . control temperature . . . and play a vital part in the growth of Automation!

In all, synchros and servos have created a tremendous interest — both in the jobs they now do, and in the many new tasks they will be called upon to perform as industry swings further and further into automatic controls and production. Untold thousands will be affected by this change-over, and the need for a truly basic text to explain synchros and servos has never been greater. Nothing explains these vitally important devices like "Basic Synchros and Servomechanisms."

These fabulous picture-text books teach synchros and servomechanisms faster and easier! The principles and practice of synchros and servomechanisms are here presented in a manner which permits a rapid grasp of the fundamentals of these vitally important subjects. What you should know about Cutler-Hammer

Cutler-Hammer has long held the respect of the aircraft industry because this company has been part of the aircraft industry for 35 years. Today, as for the decades past, Cutler-Hammer engineers are working closely with the aircraft industry's leaders . . . thinking ahead, planning, designing and building for the future. Here is the record:

1920 Cutler-Hammer designed and manufactured the first line of switches ever created specifically for use in aircraft.

1938 Cutler-Hammer designed and manufactured the first d-c power relays ever created specifically for use in aircraft.

1943 Cutler-Hammer designed and manufactured the first a-c power relays ever created specifically for use in air-craft.

1949 Cutler-Hammer started development of the first environment-free power relays for use in aircraft.

1953 Cutler-Hammer submitted samples and certified test reports on the first hermetically sealed power relay to WADC and Bu. Aer. Cutler-Hammer configuration was adopted as industry standard by ASG.

1955 Cutler-Hammer designed and manufactured the first one hole mounting Lever Lock aircraft switches.

Snap-Action PUSH BUTTON SWITCHES

Momentary Contact

Although conservatively rated for a full 8 amperes, these Hetherington "B" Series switches are actually considerably smaller than conventional ½-amp momentary-contact push-button switches.

The secret of this high rating is the unique Hetherington snap-action mechanism which reduces arcing and contact wear and provides far greater current capacity than the small size and low cost of these switches would indicate. Moreover, this exceptionally positive mechanism provides strongest contact pressure at the point of "break," thus making it impossible to "tease" the switch on or off contact.

RATING: 8 Amperes, 115 volts, ac. Underwriters' Laboratories, Inc. Inspected.

CIRCUIT ARRANGEMENTS: Single pole-Single throw, with either Normally Open (NO) or Normally Closed (NC) contacts.

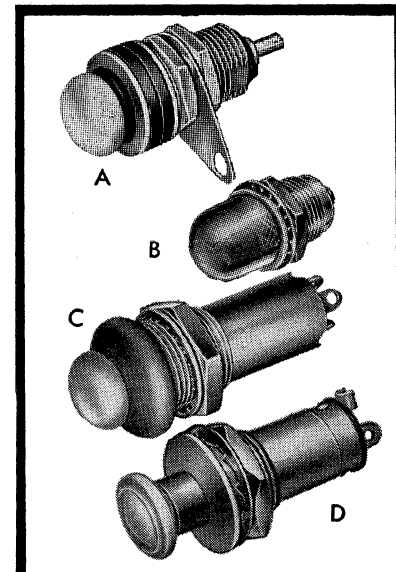
CONSTRUCTION: Cylindrical, molded phenolic housing seals switch against dust and moisture. Threaded aluminum bushing swaged to housing. Mounting nut and lockwasher provided. Contacts have heavy silver overlay on a copper base. Highly tinned lug terminals.

DIMENSIONS: $1\frac{6}{16}$" long by $\frac{31}{64}$" diameter, overall. $\frac{3}{8}$" long bushing. Mounts in ½" diam. panel hole. $\frac{7}{16}$" long lug terminals.

PRICES: **Type B2001**—SPST (NO) ..... **$1.47 list**
Type B2002—SPST (NC) ..... **$1.47 list**

Subminiature INDICATOR LIGHTS and SWITCH-LIGHT COMBINATIONS

These tiny, light-weight Hetherington indicator lights are sturdily constructed for military and industrial uses where long, trouble-free service under adverse conditions is a requisite. All types use standard AN-3140 lamps with ratings of 6, 14, 18, or 28 vdc. Removable plastic lens caps available in amber, blue, green, red, or white. Write for details on any type.

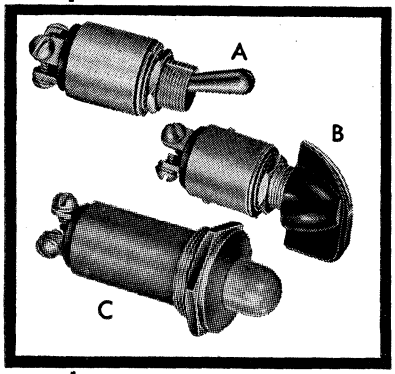


SERIES L1000: (A) For regular panel mounting in $\frac{13}{32}$" hole. Supplied with removable insulating bushings, spacers, and ground terminal. Sealed against moisture. $1\frac{5}{16}$" l. by $\frac{7}{16}$" diam. Also available for edge-lit panel mounting as Series L2000.

SERIES L6000: (B) Subminiature indicator or warning light with exceptionally wide visibility. Unique bevelling of long plastic lens "pipes" light throughout entire periphery. Lens and lamp removable as a unit from the front. For standard or edge-lit panels. Mounts in $\frac{13}{32}$" panel hole. Lens extends $\frac{27}{64}$" beyond panel. $1\frac{1}{32}$" overall length x ½" diam. Also available in 2-terminal and "Press-to-Test" styles.

SERIES L3000: (C) "Push-to-Test" indicator lights. Lamp circuit is "tested" by pressing spring-mounted plastic lens to make contact. Available with or without silicone boot for moisture protection. For flange-type mounting in ½" hole. Overall length, $1\frac{25}{32}$". Lens extends $\frac{27}{64}$" from panel.

SWITCH-LIGHT COMBINATIONS: (D) Designed originally as hostess call lights, these space-saving Hetherington switches with built-in lights now serve many industrial uses as well. Types include: Push-pull snap switches with auxiliary momentary contact and lamp circuit, Push button momentary contact switch with auxiliary lamp circuit, and Push-on pull-off or Push-off pull-on switch with integral lamp circuit. Switch ratings up to 15 amps, ac-dc. Details on request.



TOGGLE, ROTARY and "PUSH-PUSH" SWITCHES

Cam-roller action Hetherington switches positively cannot be "teased off" contact. Cylindrical anodized aluminum case reduces size by 25% over conventional rectangular switches. Continuous current ratings of 40 amps at 28 vdc or 115 vac. Write for details on any type.

SERIES T1000: (A) Bat-handle toggle switch. Available in: SP-ST on-off, SP-DT on-on, SP-ST momentary on—normally off, SP-ST momentary off—normally on, SP-DT on—momentary on. Mounts in $\frac{15}{32}$" hole. Overall length inc. toggle: $2\frac{3}{32}$".

SERIES R1000: (B) Snap-action, rotary switch available in SP-ST or SP-DT. Mounts in $\frac{15}{32}$" hole. Overall length inc. $\frac{3}{8}$" long shaft: $1\frac{31}{32}$".

SERIES J100: (C) "Push-Push" switch providing maintained contact with push button operation. SP-ST push-on push-off, or SP-DT available. Mounts in ¾" hole. Overall length $2\frac{15}{32}$".

CARTER TELEPHONE JACKS

SPECIFICATIONS

CONTACTS: Silver-zinc alloy is standard. Coin silver, fine silver and others can also be supplied in production quantities.

BUSHING: Plain brass is standard. Available with nickel-plate when specified.

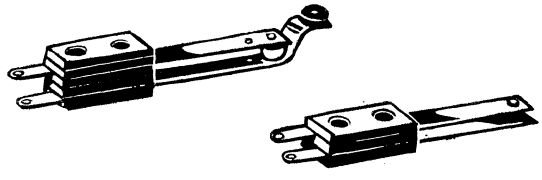
SPRINGS: Finest grade nickel silver with soldering terminals hot tinned for easy soldering.

INSULATION: Spacers made of high grade laminated phenolic.

FRAME: Frame and face plate cadmium plated steel. Frame and face plate are electrically welded to form one integral unit. This provides outstanding strength and superior ability to "stand the gaff." Where paramount quality and ruggedness is desired this telephone jack is recommended.

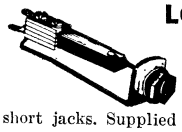
Carter "imp" Telephone Jacks can be supplied in many circuit combinations to suit your requirements. They are ideal for use in telephone, broadcast studio and audio equipment.

LEAF SPRING STACK ASSEMBLY SWITCHES



Low-cost, practical, dependable Contact Switch Assemblies can be supplied by Carter to meet innumerable different specifications and arrangements. It is impractical to catalog the many possible combinations, and for that reason we suggest you write in about your requirements.

LONG AND SHORT FRAME JACKS



LONG JACKS . . . The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the short jacks. Supplied with nickel-plated Palnut.

SHORT JACKS . . . Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet phenolic and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated Palnut.

Short and long jacks mount in single ⅜" hole in panels up to $\frac{5}{16}$" thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.

CARTER "Imp" PLUNGER SWITCH

- **Wiping-Rotating Action**
- **Minimum Arcing**

NEW **STAND UP UNDER TOUGH ENVIRONMENTAL TESTS**

Like J-B-T Switches in the rotary, lever-action, and heavy-duty toggle switch fields, this new series has quality as its first objective. J-B-T controls quality by doing its own designing, actual manufacturing and in-plant testing of production samples.

Sound Electrical Characteristics . . . Stationary contacts are brass, heavily silver plated; wiping contacts are phosphor bronze, heavily silver plated. Tested to meet 50% overload for brief periods. Contact resistance well under 0.01 ohm requirement of military specifications. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (–67°F to 185°F).

High Humidity . . . Materials, plating, construction and lubricant enable switch to withstand tropical climates.

Salt . . . Meets 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum.

Vibration and Shock . . . No momentary make or break nor mechanical damage during stringent shake tests and 75 G's drop test.

Combination . . . Can be used under any or all of these adverse conditions.

Exceptionally Rugged . . . Dull nickel plate external finish . . . terminals withstand 5 pound pull . . . operating cycles far in excess of the minimum specified as acceptable . . . stainless steel springs.

REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS

Overload . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (–67°F to 185°F).

Vibration and Shock . . . No momentary make or break or mechanical damage during stringent shake tests and 75 G's drop test.

High Humidity . . . Materials, dull finish on outside metal parts (as required by Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Springs are stainless steel. Quality standards are maintained by in-plant testing of production samples to meet adverse operating conditions.

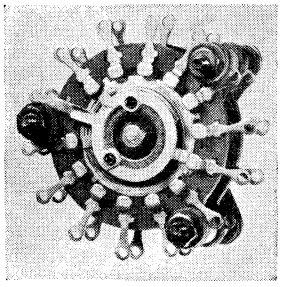
INSTRUMENT AND TESTER SWITCHES (LAMINATED)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting



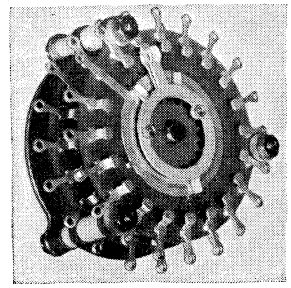
SS-14-2

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf-type (SS-20), and sharp detent assure positive indexing. Springs of both switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".



SS-20-2

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1,500 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

Military Variations—The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 to 20 live positions, no off, (add suffix F, as SS-14-2F); (e) common position in non-standard location.

BASIC 14-POSITION: 1¼" Bar knob supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION: 2" Bar knob supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat on shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown, 19 contacts per deck, continuous rotation types. **One to six decks;** for each additional deck, add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

SWITCH KIT (Laminated Phenolic)

Most of the 14 and 20 position laminated switches, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

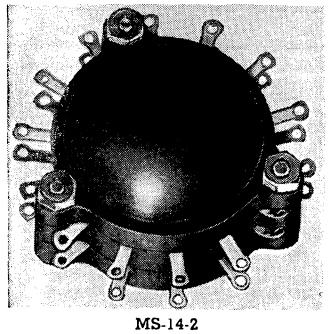
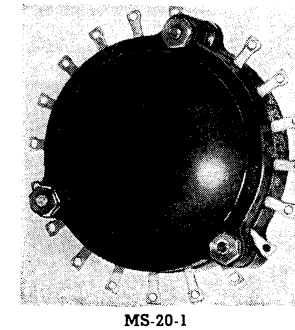
UNIQUE — MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting



MS-14-2

- **All moving contacts enclosed — minimizes dirt and corrosion.**
- **Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft for precision indexing.**
- **Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches widely used by industry and Armed Services.**



MS-20-1

FEATURES:

For description of rigid 3-post construction; heavy fine silver plating to meet 100-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; insulation resistance above 50,000 megohms; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain, sand and dust; explosion; shock; and endurance values.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2 5/32" circle for compactness. **Molded end cover** regularly supplied. **1¼" Bar knob** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. **One to ten decks** add 5/16" per deck (or gang) to depth; for eleven decks and over, add ½" to depth for double indexing mechanism; add 5/32" to depth for adjustable stop mechanism. **Continuous rotation type** supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. **Panel locator** is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2 5/8" circle for compactness. **Molded end cover** regularly supplied. **2" Bar knob** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms and self-wiping collector ring are standard construction. **One to seven decks;** add 5/16" per deck (or gang) to depth. **Continuous rotation type** supplied; on quantity orders, pre-set fixed stops are available. **Panel locator** available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator.

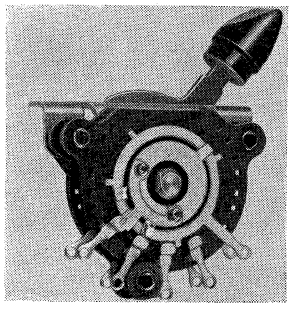
LEVER ACTION SWITCHES, KITS AND SPECIAL SWITCHES

3- and 4-Position Lever Switches — New 5-Position — Unique 6-Pole Double-throw per Deck



SS-14-1L4F-2
Two-Deck Lever-Action Switch

POSITIVE TYPE, 3- and 4-Positions. (Single-deck.) Specified where quality is a consideration, these lever switches offer many of the design features of the J-B-T SS-14 instrument-type rotary switches. The single-deck models (not illustrated) come in the conventional three-positions and in a newer four-position. Present uses include tube checkers, inspection apparatus, communication systems, hobby equipment, consoles, and sound devices. The four-position types, interchangeable except in slot length with the standard three-position, provide the extra circuit which is often needed. Dimensions are shown on the drawing below. Variations in mounting hole sizes, lever length, and tapped mounting holes can be supplied on long runs involving set-up charges. Switches are normally individually boxed with mounting hardware and KN-17 black pointed knob as illustrated. Spacing between single decks: recommended 3/4", minimum 9/16". Also see list of available mounting plates.

Spring Return Type. Single deck 3-position switches also may be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10 (Model Suffix—R).

Two-Deck Lever Action Switches. These use the same strong parts, 3-pole suspension and double-grip collector arms as the one-deck type, but are specified where quality is the prime requirement. Spacing is 3/8" between decks, the same distance as TV twinlead wires. Non-shorting (break before make) positive action, individually boxed including KN-17 knob and hardware. Recommended spacing between decks 15/16"; minimum spacing 18".

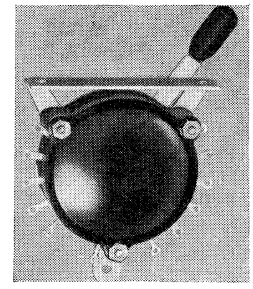
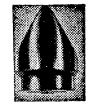
MS-20-1L5A-1
5-Position Lever Switch



MODEL MS-20-1L5A-1. For the first time designers and servicemen have available 5 live positions, two circuits per deck in a fully enclosed, lustrous black molded construction. Adapted from the MS-20 series of instrument-quality switches shown on a preceding page and having similar electrical characteristics, this positive action lever switch made an instant hit for sound systems. Now that it is released for general use, control, inspection, test and experimental circuits can be simplified by its use. Shipped individually boxed with hardware and threaded black molded knob. Sketch for mounting will be supplied upon request for SK-64.

MS-20-1L5A-1, 5-position, 2 circuit (1-deck) **$2.60**

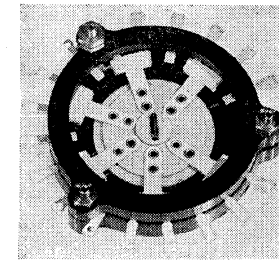
KNOBS FOR LEVERS



Spare knobs, push-on type, are:

KN-17, black, modern pointed design, metal insert, shown at left, now regularly supplied **$0.08**
KN-18, walnut, same as KN-19 ..... **.06**
KN-19, black, round, flat-type, shown at right; no insert needed ..... **.06**

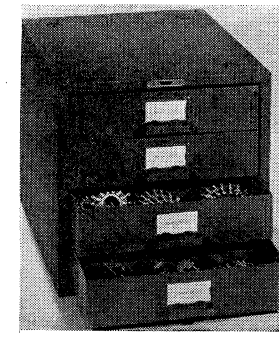
6-POLE DOUBLE-THROW PER DECK—1 or 2 DECKS



6-Pole Switches. Double-throw switching, 6 circuits per deck, becomes easy with this unique rotary-type molded switch. It is fully enclosed and similar in appearance to the molded MS-20 switches described on another page. The illustration at the right shows internal construction with back protective cover cut away. Circuit arrangement is designated on the metal front of the switch. Quality features include .007 ohm average contact resistance; heavy, fine-silver plating for 100-hour salt spray test; double-grip collector arms. Now available in non-shorting (break before make) and shorting (make before break). 2 5/8" maximum diameter, one deck, 1 13/16" behind panel; two deck, 1 1/8" behind panel.

MS-20-1-6DT, 6-pole, double-throw (1 deck), non-shorting **$2.95**
MS-20-1-6DTS, 6-pole, double throw (1 deck), shorting **3.05**
MS-20-2-6DT, 6-pole, double throw (2 decks), non-shorting **4.30**
MS-20-2-6DTS, 6-pole, double throw (2 decks), shorting **4.50**

SWITCH KIT — 14- and 20-Positions



MODEL K-1. The instrument-quality, laminated phenolic switches described previously as SS-14 and SS-20 rotary types now are available in kit form for quick assembly. This arrangement is especially helpful to engineers, experimenters, hams, and electronic maintenance departments, for special assemblies or emergency requirements. The sturdy, 4-drawer, steel cabinet with 48 compartments contains 15 SS-14 index assemblies; 11 SS-20 index assemblies; 50 14-position decks, including non-shorting (break before make), shorting (make before break); A-type (2 circuits); CS-type (complete shorting); F-type (14 live positions); and 33 20-position decks including non-shorting, shorting; A-type (2 circuits); and F-type (20 live positions). One simple tool for pushing rotors on switch shafts, also replacement parts list for ordering refills through distributors are included.

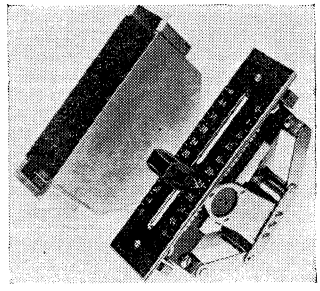
SPLICING BLOCKS• PRECISION AND VERTICAL ATTENUATORS

VERTICAL ATTENUATORS



The present model is a new development coming out of seventeen years of experience. It has removed the last objections to a unit of this type and has produced an attenuator of such perfection that we believe it will eventually displace all rotary units.

SPECIFICATIONS:

Noise Level: 130-140 db. below zero level.

Range: Standard units are furnished with 30 steps at 1.5 db. and inf. or 20 steps at 2 db. and inf. loss (off) on last contact . . . 31 or 32 contacts.

Circuit: Ladder "T" or potentiometer is standard, other circuits can be furnished to order.

Impedance: Standard values 30, 50, 150, 200, 250, 500 and 600 ohms for ladders, and 250,000 ohms for potentiometers, others to order.

Cueing Switch: Normally closed, open in off position, S.P.S.T.

Size: 30 step unit—1 ½" x 6 ½" x 3 ½".
20 step unit—1 ½" x 5 ⅛" x 2 ¾".

Insertion Loss: 0 to 5 db. depending on circuit.

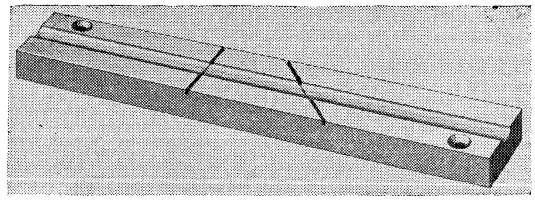
Dial: Linear, etched easily read.

Contact Arms: Multiple laminated-wiping action.

Shielding: Electrostatic shield, dust proof.

Frequency Response: Flat to 50 kc.

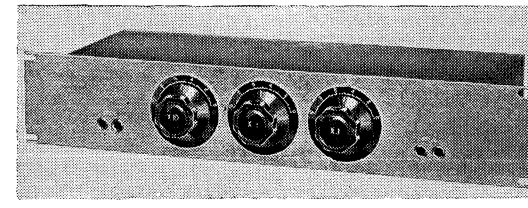
EDITALL TAPE SPLICING BLOCK



A new exclusively designed tape splicing block that can be used in conjunction with any tape recorder using standard tape. Splices can be easily and quickly made with a minimum of time and effort. Made of lifetime Duraluminum with no clips or mechanical parts to go out of order. Can be used as a separate unit or mounted as part of the tape recorder itself. Approximate overall dimensions—6 ½" long x 1" wide x ⅜" high. Furnished with drilled and countersunk holes for easy mounting.

TYPE 850 PRECISION ATTENUATOR

With the increased demand for precision in laboratory measurement of volume levels, transmission losses, gains of amplifiers, etc., the older methods and standards have become obsolete. The present units are a complete redesign of our older precision attenuators and will serve as laboratory standards. These precision units are now furnished with jack terminals and are completely shielded. They are flat for all frequencies in the audio range and reasonably flat to 200 kc. up to 70 db. They are furnished with either rack or box mounting in gray finish.



SPECIFICATIONS:

Mounting: Type 850-AT and 850-AH, standard rack panels, $3\frac{15}{32}$" x 19" x ⅛". Type 850-B furnished with dust cover.

Switches: Multiple leaf, silver alloy blades with silver contacts. Ball type detent.

Terminals: Telephone type jacks are used for input and output connections. Solder terminals are provided on rear panels for permanent connections. Insertion of plugs into twin-jacks lifts rear terminal connections.

Type of Resistors: All resistors are non-inductively wound. Negligible phase angle.

Accuracy of Resistors: All windings are adjusted to within 0.1% of the calculated value except on very low resistance values which are adjusted to within 0.25%.

Frequency Characteristics: For "T" configuration, the frequency error is negligible up to 80 db. loss, below 50 kilocycles. Balanced "H" configuration should be used where measurements above 50 kilocycles are necessary.

Pressure on the other side is required before second switch is actuated, independent of first. Yet LEKTRO-LOK requires only a single cord—eliminates costly harness assemblies! Rugged stamped metal housing, black crackle finish. Weight, 10 ozs. 5" long, 2¾" wide, 1¼" high. Single pole, double throw. Rating (A.C. only) 15 amps at 125 volts, 15 amps. at 250 volts.*

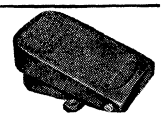
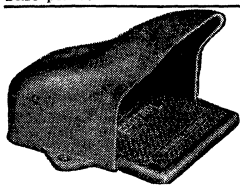
"Footrol" FOOT SWITCHES by GENERAL CONTROL COMPANY

TYPE MA A new light weight foot switch with an actuating treadle built into its top to permit operation with unusually light foot pressure. A long-life SPDT "du·op" Limit Switch forms the internal switch action. Especially recommended for fast operation where minimum fatigue is important. Access to the internal "du·op" switch terminals is greatly facilitated by simply removing the front end of the casting.

TYPE MC Especially adapted for unusual applications and hard use. Easily operated for foot, knee, hand, or elbow. Non-slip-tread top may be operated at any point of its surface.



TYPE MI An ideal treadle-type foot switch, especially convenient for many applications. Inclined, non-slip tread has an adjustable throw and includes a heel rest. Two operating pressures: 5 lbs. and 10 lbs. Mounting ears are provided on each side. A BX connector is mounted in the base, and terminal access is by a removable base plate.



TYPE MB Heavy-duty switch, especially designed for industrial and machine tool applications where thoroughly safe, rugged, and dependable operation is required. Boot top prevents false operation.

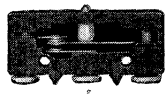
BASIC du . op SWITCH



CUT-AWAY VIEW

The type DU-S "du · op" is a precise action limit switch. The centrally-located plunger acts *directly* on the wide phosphor-bronze blade to insure instantaneous contact at each point of repetitive plunger travel. Delays of pre-travel blade action are eliminated — an important factor at high switching speeds.

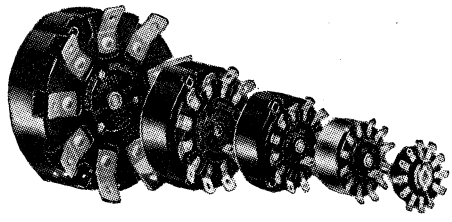
POWER TAP SWITCHES NON-SHORTING TYPE



Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

MODEL DOSY RELAY

FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

TQ

Power consumption in the two TA telephone relays listed below is minimized through the use of bifurcated blades, short armature travel, and highly efficient magnetic structure. Contacts are platinum–silver alloy.

The TQ relay occupies only .94 cu. in. of space. The conventional hinge pin is replaced by a beryllium copper retaining spring, hence no hinge pin to wear out.

Mechanical failure is minimized as the relay is secured mechanically throughout. Spacers between contact blades are silicone glass, and fastening screws are encased in "KEL-F" tubing.

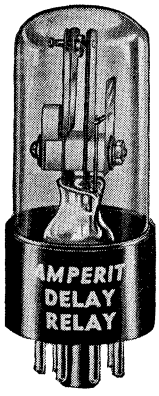
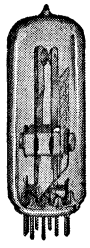
THERMOSTATIC **AMPERITE** DELAY RELAYS

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT

AMPERITE THERMOSTATIC DELAY RELAYS



STANDARD



MINIATURE

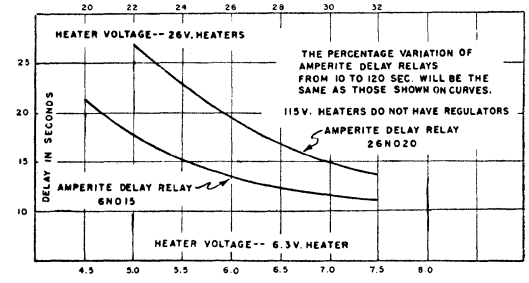
Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions.

CIRCUITS: At the present time only SPST is available — normally open or normally closed.

HEATER VOLTAGES: Relays are available with heater voltages from 2.5 to 115 V. For short delays (1 to 10 seconds) a low voltage heater, preferably 6.3 V. is recommended. STANDARD HEATER VOLTAGES: 6.3, 26 (for 22-30 V.), 115 V. Other voltages available are 2.5, 5.0, 12.0 and 50 V. For 220 V., use a 115 V. relay with a dropping resistor.

EFFECT OF HEATER VOLTAGE VARIATION ON DELAY

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.



For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

STANDARD HEATER VOLTAGES: Amperite Delay Relays with low voltage heaters such as 2.5, 5.0, 6.3, 12 and 26 V. are designed with automatic voltage regulation of the heater to compensate for line voltage variation. The effect of voltage variation on a typical relay is shown in Fig. 1. Without regulation, the delay would vary as the square of the supply voltage variation. 115 V. heaters CANNOT be supplied with heater voltage regulation.

HEATER WATTAGE: The wattage consumed by the heater is approx. 2 W. Flashers approx. 1 W.
All Heaters may be operated continuously. Life, 5000 hours minimum.

CONTACT RATING

	Delay	Contract Rating Non-Inductive	Voltage Breakdown Contact-to-Contact	Heater-to-Contact
STANDARD	2 to 10 Sec.	115V — 3a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 3a AC	1000V	1500V
		220V — 1a AC	1000V	1500V
MINIATURE	2 to 10 Sec.	115V — 2a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 2a AC	1000V	1500V
		220V — 1a AC	1000V	1500V

FLASHERS have contact rating of 115V — ½a AC, non-inductive.

AMBIENT TEMPERATURES: Relays are compensated for temperatures of −55° to +70°C. Tolerances given are 20°C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have much better ambient compensation than high voltage heaters.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 30% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 150%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. The heater can be operated continuously. Heaters will not be damaged by a 50% overload in voltage for short durations.

FLASHERS: Normally closed relays are supplied as flashers. They are available from 30 to 90 flashes per minute, and are furnished in 6, 26, and 115V heaters, as standard types.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing the voltage of the heater.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed for 30 flashes with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from *30 to 90 Flashes per minute* with tolerances as shown in the chart below:

Tolerance FPM — 20°C	Standard Flashers Available		
± 10	6F30	26F30	115F30
± 12	6F45	26F45	115F45
± 15	6F60	26F60	115F60
± 15	6F75	26F75	115F75
± 20	6F90	26F90	115F90

FLASHERS have contact rating of 115V — ½a AC, non-inductive.

ORDERING INSTRUCTIONS — *File-O-Matic Sec. 23*

NOTE: Relays shown in this bulletin are standard relays in stock and ready for immediate shipment. From them a type can be chosen to meet the needs of most Electrical or Electronic applications.
All relay contacts are rated at 115 volt-60 cycle, non inductive load.

When ordering specify relay type and coil voltage or resistance.

Example: PR5A, 115 Volts AC, 60 cycles or LB5—2500 ohms resistance.

To operate 110V DC relays on 220V DC put a 5 watt wire-wound resistor of a value approximately the relay coil resistance in series with the relay coil.

CONTACT LEGEND: S-Single; D-Double; P-Pole; T-Throw; N-Normally; O-Open; C-Closed; B-Break; M-Make.

Prices and Specifications subject to change without notice. For latest prices refer to United Pricing Service.

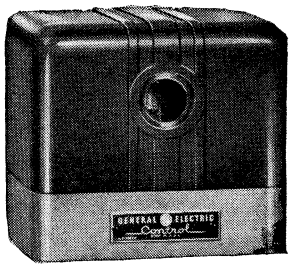
PHOTOELECTRIC RELAYS AND ACCESSORIES

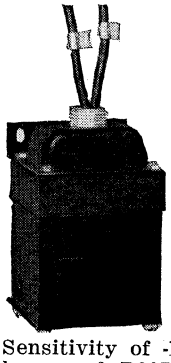


CR7505-K100G3 Relay

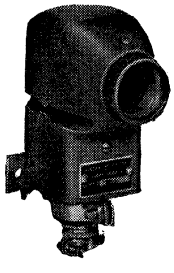
The CR7505-K100G3 photoelectric relay and accessories provide a complete line of inexpensive, but thoroughly reliable, apparatus for general-purpose indoor applications which include counting, diverting, controlling, signaling, limiting, and protecting. Underwriters' Laboratories listed.

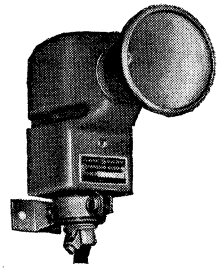
The CR7505-K100G3 includes phototube and thyratron, has a contact rating of 10 amp a-c, may be used to start f-hp motors directly, and can operate all motor starters up to and including NEMA Size 4.

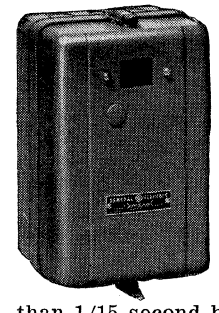
Accessories for Use with -K100G3



Model No. 9T53Y8025 light-source transformer, rated 115 volts, 50/60 cycles, primary; 4.8 volts secondary; lens-barrel assembly CR7505-B207G1, 3 in. in diameter, for mounting directly on relay; two light sources, -C201G1 with 1½-in. lens and -C203G1 with 3-in. lens; two phototube holders with six feet of special phototube cable and a plug for connecting to tube socket in the relay, -P211G1 with 1½-in. lens, and the -P212G1 with 3-in. lens. With 1½-in. lens, maximum operating distance is 12 ft; with 3-in. lens, maximum operating distance is 30 ft. Sensitivity of -K100G3 may be increased five times by use of -B207G1 lens-barrel assembly.





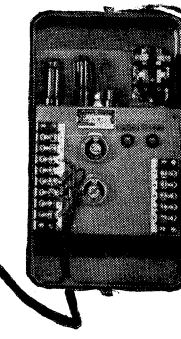


CR7505-K201, -K202 Relays

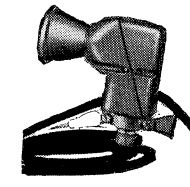
These photoelectric relays will perform the same type of functions as the -K100 with greater speed and sensitivity. These relays operate on either light increase or decrease, depending on connections. The relays will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. The d-c phototube circuit permits remote location of phototube with no loss in sensitivity.

CR7505-N210, -N211, -N212 Relays

These three relays are similar in circuit design and are especially adapted for photoelectric applications where a device must respond to rapid light changes or high operating rates.



A time-delay feature, adjustable up to ½ second by means of a potentiometer dial, is provided to delay the dropout of the magnetic delay in cases where the relay would be energized for such a short time that the period would not be sufficient to perform the external control operation desired.



The relays will respond to light changes as small as ½ foot-candle, providing there is sufficient light on the phototube.

Separate phototube holders are required for these units.

*Light level measured in foot-candles at the phototube lens with a standard light meter, with entire lens illuminated. †May use separate phototube holder. ‡Relay will respond 0.015 sec after light change. Internal timing circuit permits operation on pulses as short as 0.001 sec and may be adjusted to keep relay energized up to 0.5 sec.

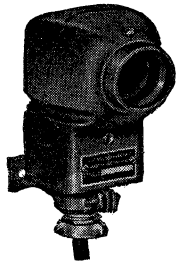
ELECTRONIC TIMERS AND DEVICES

Photoelectric Accessories for Use with -K201 and -N210 Series

The light sources are of die-cast aluminum construction. The -C201G1 light source has a 1½-in. lens, focusable from 2 feet to infinity. The -C202G1 has a double lens for short focus, for a concentrated spot approximately ¼ in. in diameter at a distance of 2½ - 4 in. in front of the lens. The -C203G1 light source has a 3-in. lens, with high-intensity beam for long-distance operation. The -C201G2, -C202G2, and -C203G2 are identical in operation with the G1 group, but have rubber gaskets between the front and back covers which makes them weather-resistant and dust-tight in accordance with NEMA Standards.

4.8 volts is required for all the above light sources and the following transformers are recommended:

Light-source transformers. The 9T53Y8047 is enclosed in a conduit box with knockouts for conduit connections. It is rated 115/230 volts, 50/60 cycles. The 9T53Y8036 is of open-type construction, but has same rating as 9T53Y8047. The 9T53Y8058 for 25/50/60 cycles is of weather-resistant construction; except for size and type of construction, rating is identical with 9T53Y8047.

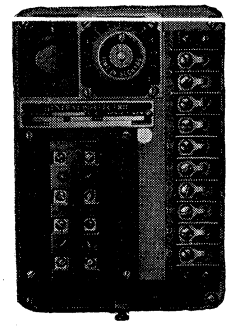


The -C208 light source is explosion-proof and can be made watertight by applying a rubber gasket which is furnished. It has a 3-in. lens and a self-contained step-down transformer for 115/230-volt operation.

The **phototube holders** are similar in construction to the light sources. The -P202G2 has a 1½-in. lens and the -P203G2 has a 3-in. lens. Both come with a 9-ft phototube cable with spade terminals.

CR7504-A142 Electronic Timer

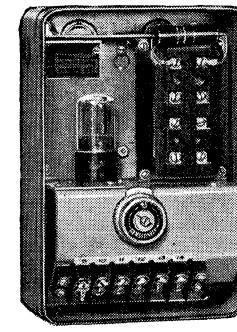
The -A142 timer is for timing applications of short time duration (-A142G1, 0.06 to 1.2 sec; -A142G2, 0.6 to 12 sec; and -A142G3, 6 to 120 sec) where long life, low maintenance, and high repetitive accuracy is required.



The -A142 has double-pole, double-throw contacts; can be used to start f-hp motors directly. Time-range dials read directly in seconds.

Two different types of operation available; immediate-start for timing operations or delayed-start for providing a time delay. Power supply, 115/230 volts, 50/60 cycles; power consumption, 15 watts.

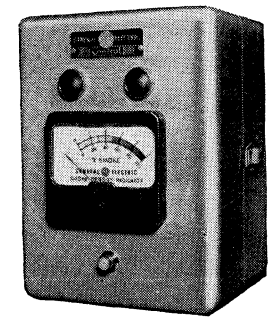
CR7511-A126 Resistance-sensitive Relay



This relay is used to obtain a reliable contact from the touch of two conductors through which only small currents flow. It will operate motors, lights, contactors, and solenoids whenever there is sufficient change in the resistance of a circuit, including liquid-level-control applications. In this way, large amounts of power can be controlled from a low-current high-resistance input.

It has 10-amp a-c contact rating, two single-pole, double-throw, contacts for controlling two independent circuits. Enclosure is weather-resistant and dust-tight.

CR7505-R201G1 Smoke-density Indicator



This control and associated equipment can be used to indicate smoke density, gas density, or the density of any fluid where density is directly related to the light transmission through the fluid. It can be used to warn furnace operators of excessive smoke conditions, to turn on blowers or relevant equipment at any smoke-density level, and when used with a suitable recorder, a continuous permanent record of smoke density is always available.

The indicator has a semi-dust-tight enclosure (NEMA Type 1A) and an industrial-type relay, 45 amp make-break and 10 amp carry, at 115 or 230 volts, a-c. Simple calibration adjustments are made with four locking-type knobs on the panel, while indicating lights and a smoke-density instrument are on the front cover of a panel.

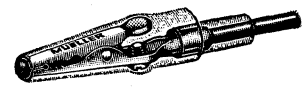
NEW INSULATED ALLIGATOR CLIPS

Patent Pending



No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

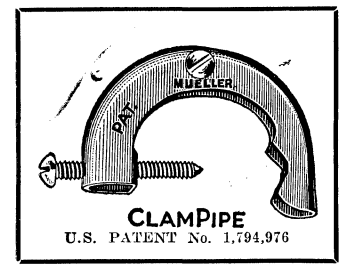
CLAMPIPE GROUND CLAMP



No. 58

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

The best ground clamp value on the market. Applicable to pipe ⅜" to 1⅜" outside diameter.

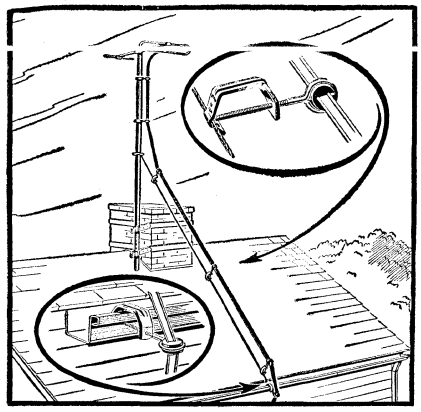
THE "TENNA-CLAMP"

A New 3-in-1 Stand-off Insulator Clamp!

Supports TV and FM Lead-ins on MASTS, PIPES, GUTTERS and GUY-WIRES



Has same general features and specifications as Tenna-ClamPipe described above except different type clamp channeled on end to take standard guy-wire in addition to pipes.

HAS THESE USEFUL FEATURES —

- One standard size solves many lead-in problems — far more useful than straps or wire bands.
- Brings lead-in to edge of roof — right where you want it — no more "draping" of wire across the roof.
- On those high jobs, come right down a guy-wire — and get around the gutter in the clear.

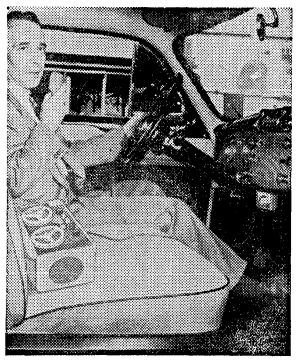
TAPE RECORDER INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorders, Wire Recorders, Dictating Machines, Radios, Public Address Systems, Amplifiers, Electric Razors, Record Players, Mixmasters, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, and Planes. Ideal for Emergency Lighting.

This group of ATR Inverters is especially recommended for use with standard A.C. operated tape or wire recorders, dictating machines, radios, amplifiers, and similar electronic equipment, being exceptionally well filtered to insure interference free radio reception. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Tape Recorder Inverters are recommended only for use with loads having power factors in excess of 70%. ATR Inverters should be used only for the applications as outlined above.



Above illustrates operation of tape recorder in car utilizing Inverter Remote Control Unit as shown below.

Let your car be a ROLLING OFFICE — dictate your reports promptly and accurately in the field — on the spot.

The operating efficiency is in excess of 85%. To figure approximate current consumption from D.C. voltage source, divide the rated input wattage of the radio set (or load) being operated by the D.C. voltage and further divide this answer by .85 which will give the actual current consumption based on the actual load and efficiency. These Radio Inverters are recommended only for use with loads having power factors in excess of 70%. ATR Radio Inverters should be used only for the applications as outlined above.

ATR Inverters are not recommended for operating refrigerators, washing machines, or similar motor-driven appliances; also, ATR Inverters are not recommended for operating toasters, electric irons, sun lamps, or similar appliances of high wattage or low power factor. Any attempt to use the Inverter for applications not recommended will ruin the Inverter immediately and void the guarantee.

GERMICIDAL LAMP INVERTERS

Specially Designed for Operating Standard A.C. Germicidal Lamps from Storage Battery Voltages in Trucks, Buses, Boats, Trains, and Planes.

This group of ATR Inverters is especially recommended for use with standard A.C. operated germicidal lamps providing protection against bacteria and mold spores in perishable food areas or hospital-like areas in trucks, boats, planes, and trains. Bacteria and mold spores cause losses of millions of dollars each year through spoilage, contamination, and added maintenance costs. Effective control of air-borne germs, bacteria and mold spores by use of germicidal lamps is widely used in processing and packaging of fresh food products. This same protection against contamination during delivery is now possible using germicidal lamps operating from an ATR Inverter connected to D.C. Storage Battery Power. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet long-life operation. These rugged, efficient, little power houses are self-maintaining — require no warm-up. They change your D.C. battery power to 110 volt A.C. (household type) power instantly and quietly. ATR Inverters are fully protected and are big enough to do a proper job and small enough to fit most anywhere. All models indicated are equipped with ATR plug-in Inverter Vibrators. These Inverters (except Model LIG) also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads, and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. The battery current consumption required is normally less than that drawn by ordinary automobile headlight(s). These ATR Inverters should be used only for the application as outlined above.

AUTO Plug-In Type — Portable
BATTERY CHARGERS

NO INSTALLATION — JUST PLUG INTO CIGARETTE LIGHTER RECEPTACLE

For keeping the storage battery fully charged right in the car, truck, boat, or plane! A storage battery necessity — needed more now than ever before — makes motor starting easy!

The additional appliances — such as auto radios, spotlights, motors, heaters, fans, cigarette lighters, etc. — operated from the storage battery impose a severe drain on the battery making the normal "hard starting", especially in cold weather, still more difficult. The ATR Automatic Tapering Battery Charger solves this problem by charging the storage battery right in the car, truck, boat, or plane conveniently and economically. No need to remove the battery! Simply plug special charger cable into dash receptacle of the vehicle; or, if truck type charger, clip charger cable leads to the storage battery and flip the charger toggle switch "on". Danger of over-charging battery is minimized due to automatic tapering charge feature.

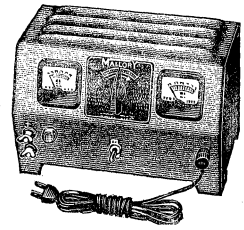
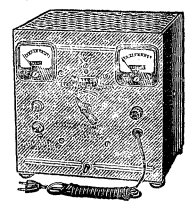
Mallory 12RS6D Bench Power Supply



The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6¾″ high, 10⅜″ wide and 5½″ deep. Shipping weight approximately 8 lbs. Catalog No. **12RS6D $42.95** Net

Mallory Service Bench Rectopower Supplies

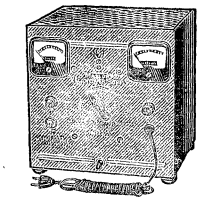


Model 28RS15D is designed to operate from 110-120 volts, 60-cycles, and is equipped with accurate reading DC voltmeters and ammeters, self-reclosing overload circuit breakers in the DC circuit, fuse protection in the AC circuit and an "on-off" switch. Both models are equipped with a continuously adjustable transformer-rotor system to provide precise adjustment of the output voltage to any value from 0 to rated output voltage. Both models are filtered by high-capacity electrolytic capacitors.

These models are also equipped with a new, simplified automatic voltage regulating system (no relays) which keeps the output voltage relatively constant as the load changes from no-load to full load. Model 28RS15D will supply 0-16VDC @ 30A or 0-32VDC @ 15A.

Model **28RS15D $224.50** Net.

Mallory 12RS14D Heavy Duty Six Volt DC Power Supply



The Mallory 12RS14D 6/12 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 12RS14D operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0–40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

Overall dimensions—11″ high, 10½″ wide, 8¾″ deep. Shipping weight—26 lbs. Catalog No. **12RS14D $139.50** Net

Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where SHUNT drive is employed, a given vibrator must be used at its design voltage only. Where SERIES drive is used, an external resistor may be used to drop a higher voltage for use of a PARTICULAR vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

* Cornell-Dubilier vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a **6** volt Cornell-Dubilier series drive vibrator is used for **12** volt operation in a 6/12 equipment, the provided resistor may not pass enough power to drive it properly. To avoid any dependence at all upon the coil resistor, Cornell-Dubilier provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

** Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

SINGLE (CROSS SECTION VIEWS) TANDEM

CORNELL-DUBILIER HEAVY DUTY VIBRATORS are available in the above four styles for operation at 60 or 100 cycles with regular or close frequency adjustment in any of 6 standard operating voltages — 6, 12, 28, 32, 64 and 110. Although these combinations result in 96 "standard" vibrators, only those models which are generally used are listed below for Jobber distribution.

All heavy duty vibrators have separate driving circuits with provision for external suppression. Two or four sets of power contacts are brought out individually. Center reeds are common.

Precision ground ceramic spacers, micrometrically selected Swedish steel center reeds, and precision oscillographic adjustments combine to insure uniform reliable service life.

Coding of the heavy duty vibrators is meaningful. In a typical part number such as 110VB6, the prefix 110 denotes operating voltage, V denotes vibrator, B denotes the style, and 6 denotes 60 cycles with regular frequency tolerance. Close frequency adjustment as desired for television is denoted by a final H suffix. A typical close frequency vibrator is 110VB6H.

1. Standard models deliver 110 volts, 60 cycle, AC power. Output watt ratings are based on continuous operation on high power factor loads. They should be reduced by the percent of power factor where inductive loads are involved.

2. All models are housed in cases of similar design and appearance. The class designations signify approximate size and weight as follows:

   SP — Shaver Pack—$2\frac{5}{8}$ x $2\frac{1}{2}$ x $3\frac{7}{32}$..... 2 lbs.
   LM — Light Midget—3 x $3\frac{1}{2}$ x $4\frac{13}{16}$..... 4 lbs.
   M — Midget—$3\frac{15}{16}$ x $4\frac{5}{8}$ x $5\frac{15}{16}$..... 6 lbs.
   L — Lightweight—$5\frac{1}{2}$ x $6\frac{1}{4}$ x 8..... 12 lbs.
   S — Standard—$5\frac{1}{2}$ x $6\frac{1}{4}$ x 9..... 14 lbs.

Vibrators as produced by different manufacturers employ driving circuits which require more or less power. Such power is applied by either series or shunt driving means. Where shunt drive is employed, a given vibrator must be used at its design voltage only. Where series drive is used, an external resistor may be used to drop a higher voltage for use of a particular vibrator. These considerations apply to many 6/12 Mobile Communications equipment.

* Radiart vibrators have always used an exceptionally strong driving coil to obtain long and dependable service. When a 6 volt Radiart series drive vibrator is used for 12 volt operation in a 6/12 equipment, the usual resistor may not pass enough power to drive it properly. To avoid any dependence at all upon the coil resistor, Radiart provides similarly numbered shunt drive vibrators for use when 6/12 equipment is used on 12 volts.

In addition to insuring proper drive, the practice of using a 6 volt vibrator at 6 volts and a 12 volt vibrator on 12 volts, permits the factory to provide an adjustment and selection of contact that is best for each application.

** Where 12 volt operation only is involved, a choice of either shunt drives such as 6715 or series drive such as (6715 S) is available.

OBSOLETE TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other minor features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the Jobber Service Department.

NOTES ON SPECIFICATIONS

Note 1: Continuous ratings are based on operation of nameplate rating indefinitely at ambient temperatures not to exceed 100° F. with free air circulation. Intermittent ratings are based on 25% duty cycle, with on-time not in excess of 15 minutes. Up to 30 minutes operation at the intermittent maximum is not detrimental, provided it can be followed with approximately two hours of cooling time.

Note 2: Output watts ratings are based upon 70%-100% Power Factor loads.

Note 3: Classes of Models indicate case size and approximate weight as follows:

SP—Shaver Pack	2-5/8 x 2-1/2 x 3-7/32	— 2 Lbs.
LM—Light Midget	3-1/2 x 3 x 4-13/16	— 4 Lbs.
M—Midget	4-5/8 x 3-15/16 x 5-5/16	— 6 Lbs.
L—Lightweight	5-1/2 x 6-1/4 x 8	—12 Lbs.
S—Standard	5-1/2 x 6-1/4 x 9	—14 Lbs.
H—Heavy Duty	6-1/2 x 7-1/2 x 11	—20 Lbs.
SH—Super Heavy	8 x 9-1/2 x 13	—35 Lbs.

Note 4: RADIART VIPOWERS contain added components required to make them universally applicable to various kinds of loads within their name-plate rating. For example, the same unit may be used for television, radio, dictating service, office machines, and even for industrial purposes. Principal uses are coded in Specifications as follows. Any model is suitable for uses coded for models of lower output rating.

RA—Radio	BE—Battery Eliminator	IN—Industrial
TV—Television	MT—Mobile Transmitters	SH—Shaver
DI—Dictation	A—Amplifiers	PA—Public Address
TR—Tape Recorder	PH—Phonomoters	

Note 5: Power Factor Correctors are available for use with highly inductive loads, so that they may be handled by Regular VIPOWERS. Model PF1 corrector used on 60% PF loads handles up to 100 watts; On 30% loads, to 25 watts. PF2 on 60% PF loads handles 150-300 watts; on 30% loads, 50-75 watts. PF3 on 60% loads handles 350-500 watts; on 30% loads 100-150 watts. See Engineering Bulletin EB-3007 for details.

Note: See Engineering Bulletin EB-3013 for mounting kits for all models, and for leads, master fuse kits and remote control kits for 6 or 12 volt models.

Perma-Power Equipment----made better!

PERMA-POWER RADIO-CONTROL GARAGE DOOR OPENER

Just a touch of your finger . . . . . opens and closes your garage door

The Perma-Power Garage Door Opener embodies novel design features providing maximum convenience and safety to the user. Styling, too, was given important consideration. All mechanism is contained in a modern spun-aluminum fixture that illuminates as well as beautifies the garage interior.

The concealed motor is a ¼ HP, 117 volt, capacitor-start type with ample power to operate the largest of modern, residential, garage doors. Also in the fixture is the radio receiver which turns on the motor when it gets a signal from the transmitter in the car.

- When button is pressed, door automatically opens and turns on fixture light, illuminating garage. When button is pressed again, door automatically closes and light turns off.
- Door locks securely when shut. No conventional key lock required.
- New automatic shut-off gives extra protection. If door hits an obstacle, power shuts off instantly. When started again, door reverses, pulling away, so object cannot be trapped.
- Sensitive safety clutch is easily adjusted by a knob to exert just enough force to move door reliably. This vital safeguard makes door travel gentle and, consequently, easy to arrest.
- A detachable door arm permits unlatching for manual operation of the door in case of power failure.
- A push-button with wire is supplied for wall mounting in garage or other location to operate door from inside. This control circuit is only 24 volts and safely isolated from the main service line. Additional buttons may be easily installed at auxiliary points. A key operated switch is available for outside mounting.
- Electrical overload devices protect the entire installation. The radio-control receiver is individually fused.
- The radio-control transmitter is crystal-controlled, sending out its signal on an FCC authorized frequency of 27.255 mcs. Being small, it mounts under the hood and operates directly from the 6 or 12 volt car battery. When door operation from more than one car is desired, a separate transmitter is installed in each additional car.
- The radio-control receiver is contained inside the aluminum fixture in the garage. It plugs into the main assembly and is constantly ready to obey the car signal to open or close the door.
- An exclusive, coded channel is set up in each radio control system upon installation. Ten different factory-sealed plug-in channel units are available, requiring no adjustment at the point of use. This allows interference-free operation to and from neighboring installations and other electrical devices.
- One easy-to-get tube type, the 6U8, is used in the radio-control equipment —one in the transmitter, two in the receiver.
- Illumination of garage from operator fixture may be had even with door closed. Suitable terminals are provided for wiring to a wall switch.

DOOR REQUIREMENTS—The Perma-Power Garage Door Opener will operate all one-piece tilt-up or sectional roll-up residential doors that travel on horizontal or curved roller tracks. Doors may be up to 18′ wide and 8′ high and of metal or wood construction. As little as 2″ of headroom (space between high-arc of door and ceiling) in garage is adequate for installation.

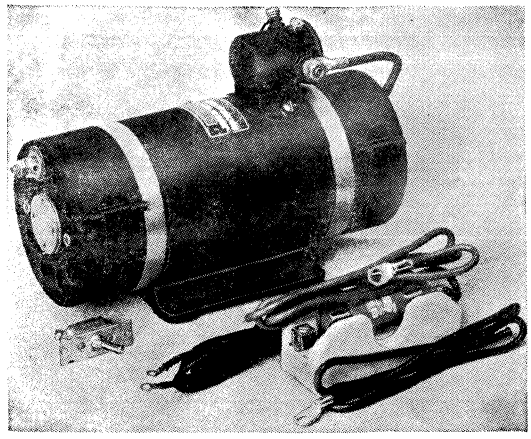
DYNAMOTOR



Operates 6 v. Radios from 12 v. Batteries

NOW . . . 2 CARTER CHANGE-A-VOLT DYNAMOTORS FOR 10-20-30 WATT TWO-WAY RADIOS

Now it is possible to operate 6 volt two-way radio equipment from 12 volt systems without any rewiring or modifications. The Change-A-Volt Dynamotor is supplied complete with starting relay and switch, fuse block, and wiring to directly convert a higher voltage battery to a 6 or 12 volt radio supply.

Designed for long life, this slow speed Dynamotor is equipped with low copper content Line-O-Life brush grades for operating radio receivers continuously. Most models operate less than 3000 RPM. 615V and 128V models are designed for 30 watt transmitters and deliver 3 times rated current for intermittent transmit service. 610V and 125V are designed for 10 to 20 watt transmitters and deliver two times rated current on intermittent transmit service. High efficiency. Voltage regulation from 15 amperes to 45 amperes is approximately 1.3 volts. Also available in 24, 28, 32, and 70 volt inputs to change directly to 6 or 12 volt. Change-A-Volt can also serve as a battery equalizer when operating low voltage equipment on several cells of a higher voltage battery system. A double pole switch or relay must be used when operating the dynamotor as a battery equalizer.

Size 11⅛" long, 7 1/16" high, 4½" wide. Weight approx. 25 lbs.

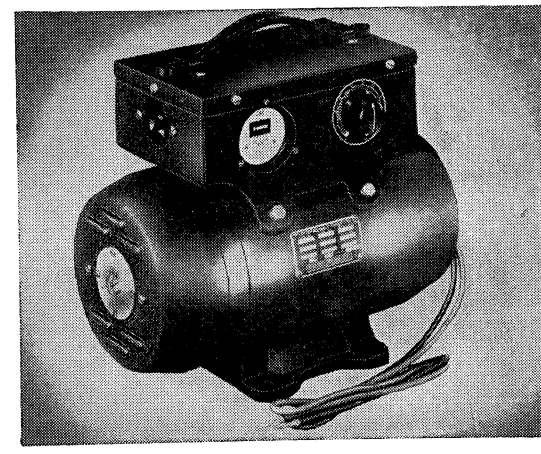
FREQUENCY CONTROLLED CUSTOM FOR PROFESSIONAL AND BROADCAST TAPE RECORDING



The new Custom Converter with manual frequency control has been developed to provide a portable DC to AC power source for professional and broadcast tape recorders, heavy duty electronic measuring devices, and Tape recorder-AC motor driven camera combinations. Now for the first time, sufficient frequency constant AC power is available to operate this type of equipment from DC lines or battery source.

The rheostat control and the frequency meter are mounted in the attractive aluminum housing. A noise filter is also available in the same housing, although it is not usually necessary for operating recorders, amplifiers or other audio devices. Filtering is required when radios or other RF circuits are operated from the converter.

Convenient recessed DC male plug is furnished for 32, 64, 115 and 230 volt DC input models. 12, 24 and 28 models are equipped with heavy stranded input leads for battery connections, as shown. A flush AC mounted receptacle is supplied on all models for quick AC connections. The sturdy carrying handle allows the converter to be moved immediately after its operation, a life-saver for taping remote broadcasts.

Each model must be designed to properly match the power factor, voltage, frequency, and load requirements. Any of the Custom models can be furnished with frequency control. Model listed below has been laboratory tested and is matched to provide perfect operation. Kindly send your special requirement to the factory for prompt and careful consideration.

Converters for Popular Wire and Tape Recorders

Converter AC output frequency and Converter Power Factor must be perfectly matched to the recorder load to assure proper recording and play back performance. Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore *will not operate* the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load.

The equipment listed below has been laboratory-tested and the correct Carter Converter recommended for each model. Use this chart for your recorder Converter requirements. If the equipment is not listed on this chart, please write to the factory.

POWERSTAT VARIABLE TRANSFORMERS
FOR SINGLE PHASE DUTY

POWERSTAT variable transformers are auto-transformers of toroidal core design with a movable brush tap which is rotated to deliver any desired output voltage from zero to, or above, line voltage. Glass smooth commutator surfaces and advanced winding techniques assure smooth operation and permit adjustment to a fraction of a volt.

Other important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion and rugged construction.

A wide range of standard POWERSTAT variable transformers are available for 120, 240 and 480 volt, single phase operation. Both manually-operated and motor-driven types are offered for air-cooled and oil-cooled duty.

The rating chart lists some of the most-called-for standard POWERSTATS.

†Unit has terminals for operating at ½ this input voltage if desired

‡Unit has terminals for limiting maximum output voltage to line voltage if desired. Other units must be ordered "L" connected.

*For all motor-driven models prefix the speed designation to the type number. Time given is time for full range travel:

136-236 Series:
For 5 seconds, prefix 5M; for 15 seconds prefix 15M; for 30 seconds, prefix 30M; for 60 seconds prefix 60M. (For example: 30M136)

1156-1256 Series:
For 6 seconds prefix MZ; for 14 seconds, prefix MY; for 19 seconds, prefix MX; for 45 seconds, prefix MW. (For example: MW1156)

‡‡**Letters in type numbers designate as follows:**

Prefixes:
F — Enclosed terminal box with cartridge type fuse
O — Oil-Cooled
X — Explosion-Proof
2PF — 2-prong parallel-blade plug and receptacle, enclosed terminal box with cartridge type fuse
2TF — Same as 2PF except twist-lock plug and receptacle
3PF — 3-Prong "Crow-Foot" plug and receptacle, 3rd wire grounded to frame. Enclosed terminal box with cartridge type fuse
3PN — Same as 3PF except NEMA type connections
3TF — Same as 3PF except twist-lock connections

Suffixes:
U — Supplied without protective screening, terminal enclosure, etc.
Numbers (2, 3, 4 or 6) indicate number of units in assembly
D — Units open-delta connected (3-Phase)
E — Units electrically independent (1- or 3-Phase)
L — Connected so maximum output voltage cannot exceed input voltage
P — Units parallel connected (1-Phase)
PS — Units series-parallel connected (1-Phase)
S — Units series connected (1-Phase)
Y — Units wye connected (3-Phase)

**If the maximum output voltage is limited to the input voltage ("L" connection) the frequency range is 50/60 cycles.

POWERSTAT VARIABLE TRANSFORMERS
FOR THREE PHASE DUTY

POWERSTATS are available in numerous ratings for three phase operation. Standard assemblies for back-of-panel and floor mounting are offered. To suit individual requirements, both manually-operated and motor-driven POWERSTATS are obtainable as standard assemblies.

All POWERSTATS have inherent features of excellent regulation, high efficiency, conservative ratings, zero waveform distortion and rugged construction and ease of operation.
