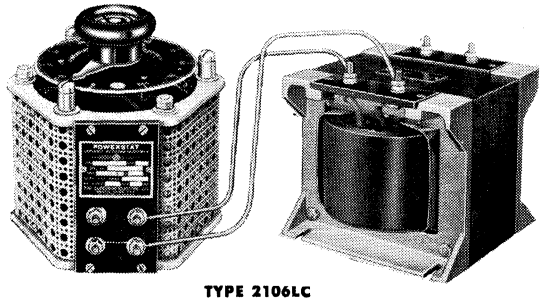
POWERSTAT LINE CORRECTORS



TYPE 2106LC

A POWERSTAT Line Corrector functions as its name implies — it corrects line voltage variations to maintain a constant output voltage. It consists of two components. A POWERSTAT variable transformer, appropriately tapped, controls the primary of a fixed ratio step-down transformer. Although a POWERSTAT Line Corrector is generally employed to correct line voltage variations, it can also be used to supply a limited output voltage range from stable a-c power sources. At the sacrifice of a wide output voltage range, relatively large amounts of current can be controlled.

POWERSTAT Line Correctors are offered in a multitude of models and ratings for single and three phase applications; as manually-operated and motor-driven assemblies.

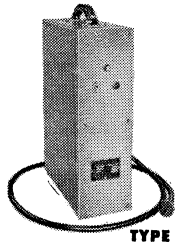
VOLTAGE CONTROL EQUIPMENT

STABILINE AUTOMATIC VOLTAGE REGULATORS

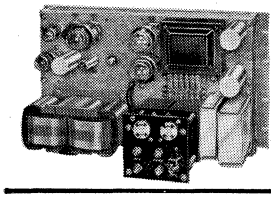
It is obviously impossible to produce any single type of electrical apparatus that will fulfill all requirements for every application. STABILINE Automatic Voltage Regulators are manufactured in three distinct types to meet individual needs. These three are: Type IE (Instantaneous Electronic) . . . for the most exacting control — Type EM (Electro Mechanical) . . . for controlling large industrial loads or for applications requiring zero waveform distortion — and Type TM (Tubeless Magnetic) . . . for unattended locations. All are designed and manufactured to assure precise correction and dependable operation over long periods of continuous use. They will meet the most rigid mechanical and electrical specifications. A wide range of standard models are available and are listed below.

TYPE IE (Instantaneous Electronic)



TYPE IE51002

TYPE IE5101R



Type IE is completely electronic with no moving parts. Providing instantaneous correction, it is ideal for laboratories, test lines, as a component of other equipment . . . and everywhere that the most exacting automatic voltage regulation is required. At no load, full load or any intermediate stage, constant output voltage is maintained regardless of line fluctuations. The output voltage is held to within ±0.1 volts of nominal for wide line variations and within ±0.15 volts of nominal for any load current or load power factor change from .5 lagging to .9 leading. Waveform distortion never exceeds 3%.

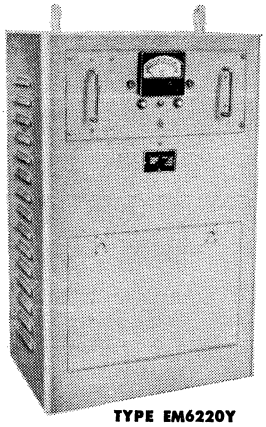
TYPE EM (Electro Mechanical)



TYPE EM6220Y

Type EM is an electro-mechanical device with a very sensitive detector controlling a motor-driven POWERSTAT variable transformer and auxiliary transformer. While not instantaneous, Type EM corrects faster than most other automatic voltage regulators. Highly efficient in operation, it finds widest application in controlling large industrial loads and also in electronic equipment where zero waveform distortion is essential. Features include: complete insensitivity to the magnitude and power factor of the load, no effect on system power factor, no critical adjustments and adjustable output voltage.

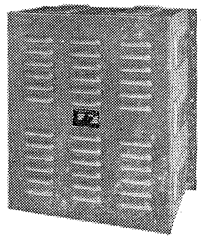
TYPE TM (Tubeless Magnetic)



TYPE TM7105

Type TM has no moving parts. It has no tubes to replace and no transistors. It is ideal for unattended locations where maintenance is not a possibility over long periods of time and for critical applications where failure at any time under the most adverse operating conditions cannot be tolerated.

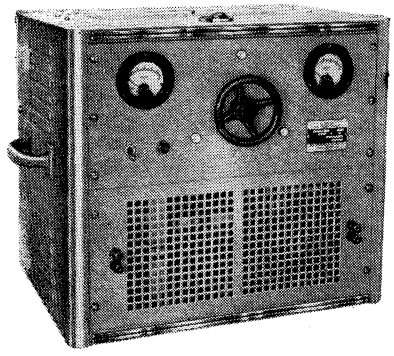
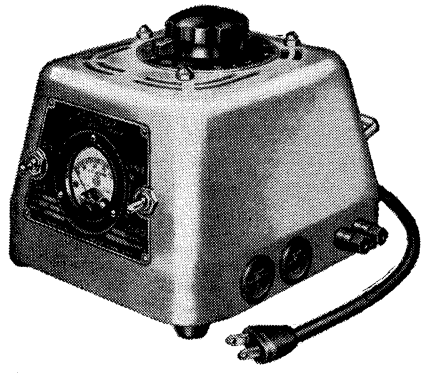
VARICELL D-C POWER SUPPLIES



A VARIABLE RANGE OF STABILIZED AND REGULATED D-C VOLTAGES FROM AN A-C SOURCE

The ideal source of low d-c voltages, the VARICELL is simply plugged into any convenient, single phase a-c outlet supplying a nominal 115 volts at 60 cycles and it is ready to operate. Turning the handwheel provides any desired output voltage from 0-30 volts. Its load rating is 15 amperes. Any setting from 6 to 30 volts is unaffected by changes in line or load current. For any setting from 6 to 30 volts, R.M.S. ripple voltage never exceeds 0.1 volts, and stabilization and regulation is ± 0.25 volts.

VOLTBOX A-C POWER SUPPLIES



A COMPACT, PORTABLE SOURCE OF VARIABLE A-C VOLTAGE

This is a handy instrument widely used in chemical, physical, electrical and other laboratories and in inspection, testing and plant maintenance departments. It eliminates the need for collecting a variable transformer, voltmeter and connection leads when tests involve variable a-c voltages. All necessary components are housed in a compact case. By turning the "On-Off" switch to "On"; snapping the line-load switch to "Load" and rotating the knob; the desired voltage is available. Ratings to meet every requirement.

ELECTRONICALLY REGULATED D.C. CONSTANT VOLTAGE POWER SUPPLIES

MODEL 1 RELAY RACK MOUNTING $52.50

Input: 105-125 volts AC. 50-60 cycles.

DC Output Voltage: Continuously variable from 200 to 325 volts DC for load currents 0 to 100 ma.

Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.

Ripple Output: Less than 10 millivolts rms.

Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.

AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.

Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19″ relay rack mounting. Panel Width: 19 inches; Panel Height: 5¼ inches; Depth Behind Panel: 8½ inches.

Cabinet and Panel Finish: Standard Black ripple enamel.

Controls: Rear Chassis—DC output voltage control. Front Panel—Pilot light, input power switch, and fuse.

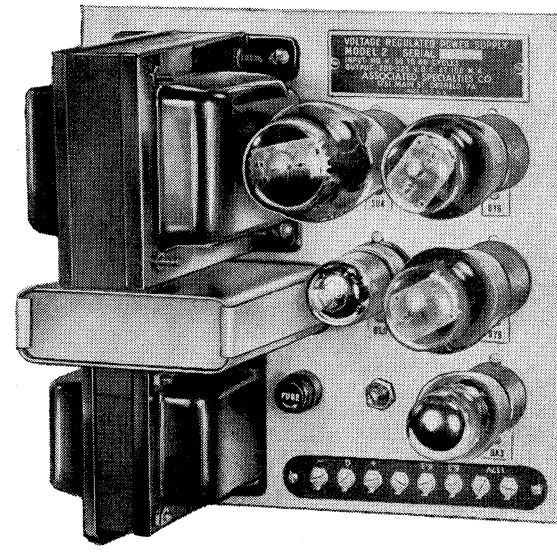
Weight: Net weight is approximately 20 pounds.

High Quality Components: Only components of the highest quality are used in this equipment insuring you years of trouble-free dependable operation.

Accessibility: By removing two small screws, the front panel may be removed while the supply stays mounted on a relay rack or cabinet. This allows quick and easy inspection.

MODEL 2 SUB-CHASSIS MOUNTING $49.50

Sub-chassis mounting type regulated power supplies are designed to save space and money. They can be mounted on a chassis along with other components and thereby save space which would be used by a relay rack mounting supply. Savings are made in the size and cost of the cabinet required for a job along with the lower cost of the sub-chassis mounting supplies.



SAME AS MODEL 1 EXCEPT

Automatic Instantaneous Voltage Regulation

SOLA Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 V.A. to 25,000 V.A., to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

SOLA Constant Voltage Transformers have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Response time, 1.5 cycles or less.
2. No moving or renewable parts . . . no manual adjustments.
3. Completely automatic continuous regulation.
4. Self-protecting against short circuits.
5. Current limiting characteristic protects load equipment from excessive fault currents.
6. Can often be substituted for conventional non-regulating transformers.
7. Relatively compact.
8. Provide isolation between input and output circuits.

SOLA *Constant Voltage* DC POWER SUPPLIES

For intermittent . . . variable . . . pulse . . . or high amperage loads

This combination of Sola Constant Voltage Transformer, germanium power rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of ±1% or less with ±10% line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.
7. Low ratio of size and weight to power output.
8. Freedom from routine adjustment and maintenance.
9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient germanium rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

ADJUSTABLE, REGULATED DC POWER SUPPLY THE "DC SOLAVOLT"

. . . Gives all the advantages of the Sola DC Supply design plus an output adjustable over a considerable range of voltage.

Regulation over the entire range of adjustable output voltages is within ±1% at full load, with supply voltage variations up to ±15%. At 50% load and lowest voltage setting, regulation is within ±1.5%. Ripple voltage is held within 0.05% at full load and nominal input voltage.

This adjustable DC Power Supply design offers simplified operation and maintenance. There are no tubes to replace, no "compensating" or "zero" adjustments to make, no instruction sheet to refer to in normal daily operation. No routine maintenance is required. All components on rear of panel are enclosed by a perforated housing.

STANCOR TRANSFORMERS

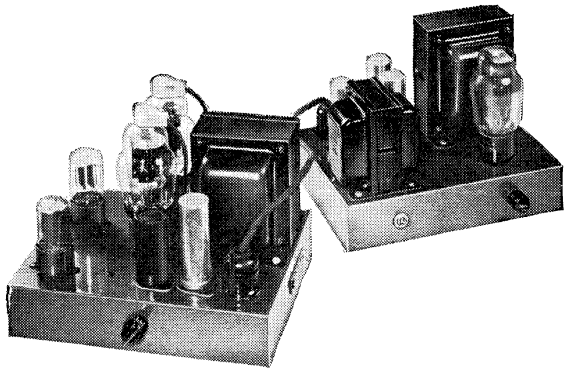
AND RELATED COMPONENTS

TELEVISION COMPONENTS

Almost 200 TV replacement transformers and related components, the most complete line in the industry, are available from Chicago Standard. These include over 50 exact replacement flybacks and almost 60 power transformers, as well as yokes, vertical outputs, width and linearity coils and many other popular TV replacement units.

Ask your distributor for a free copy of the latest edition of the Stancor TV Transformer Catalog and Replacement Guide listing these units and replacement data on thousands of television sets.

STANCOR ULTRA-LINEAR HIGH-FIDELITY AMPLIFIER

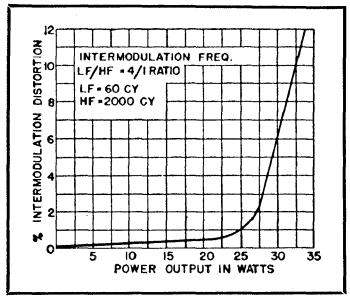


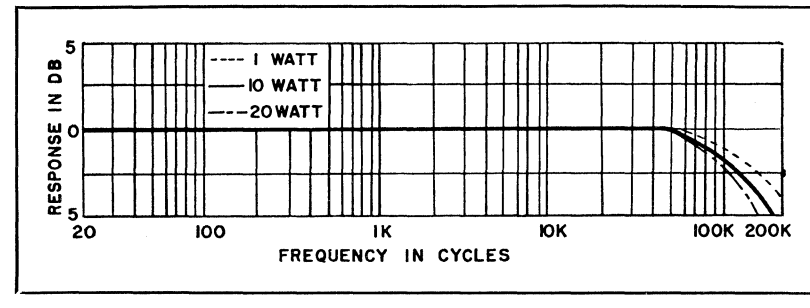
Now you can build an Ultra-Linear version of the famous Stancor-Williamson high fidelity amplifier, using Stancor Ultra-Linear Output Transformer A-8072. For complete construction details see Stancor Bulletin 479.

The original Stancor-Williamson amplifier can be converted to Ultra-Linear operation by a few simple circuit changes and the installation of the A-8072. Conversion instructions are included in Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear Amplifier; Chassis Set WM-8, $5.75 net. In addition to Ultra-Linear Output Transformer A-8072, $15.00 net, this amplifier uses power transformer PC8412, $8.58 net and filter choke C-1411, $4.29 net. The other components used cost about $25.00. They are all stock parts and can be readily obtained from your Stancor distributor.

Write for your FREE copy of Bulletin 479.





HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ±1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

•New part number. ‡Designates part number to be removed from next catalog. ★Designed for a nominal input of 117 volts, 50-60 cycles.

LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

AUDIO TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only, type UM.

SPECIAL Chicago-Stancor ultra-miniature transistor transformers, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.

MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in ⅞″ square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1¼″. The case has two 2-56 threaded inserts, 11/16″ centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

PUBLIC ADDRESS RANGE TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers. (16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

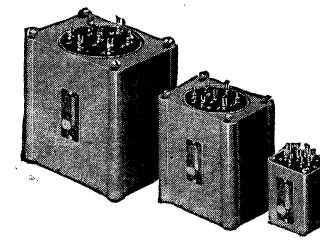
HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS



HF Series

These units have a wide frequency response of 20 to 20,000 cps with ±1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, *e.g.*, the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to −8 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. N-13).

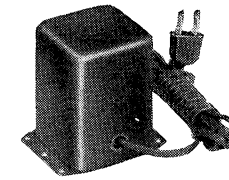
ISOLATION TRANSFORMERS



CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage —primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

As a Hybrid Transformer — This precise matching transf. is an excellent hybrid unit for operation from two 250/300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation between sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps.

DESCRIPTIVE DATA, GENERAL — Maximum rated operating level ▼ applies to frequency range 20-20,000 cps. Power rating is ½ at 15 cps, ¼ at 10 cps. Full power (60 cps) primary open circuit inductance is approximately 100 Henrys for each 1000 ohms of primary impedance. Leakage inductance, secondary referred to total primary, is approximately 1 mh per 1000 ohms of primary impedance. Leakage inductance, half primary to half primary is approximately 1 mh per 1000 ohms of primary impedance. Can be used between half and double of rated impedances. For halved impedances, power ratings are doubled. For doubled impedances, power ratings are halved. Secondary may be operated with either end, or C.T. grounded.

High Fidelity Output Transformers for every application.

BROADCAST QUALITY COMPONENTS

Modern high fidelity broadcasting and transcription equipment requires the use of "Audio" — transformers of utmost quality and reliability in performance. Freed broadcast quality components have been designed to meet these requirements. They are wide band, high fidelity components with low distortion throughout the audio range and beyond. Frequency response for most units is in the order of ± 1DB from 20 to 20,000 cps and for high level output transformers in the order of ± 0.5 DB from 20 to 30,000 cps.

These units feature astatic construction, longitudinal balance, high efficiency, uniform response, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished through the use of hum balanced coil structures and multiple alloy shielding. Equal high fidelity response is assured on every tap of any universal impedance winding without line reflection of transverse coupling.

All broadcast quality components are thoroughly impregnated in a special non-hygroscopic varnish and fully encapsulated with a moisture proof, high melting compound.

All broadcast quality components are **hermetically sealed**.

All units are tested in accordance with and meet "RETMA" standards.

Almost all units are designed with universal impedance windings to insure greatest versatility.

A full line of high Q reactors complements this series of audio transformers.

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics combined with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "RETMA" standards.

QGC HIGH Q REACTORS

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in **hermetically sealed** cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by ± 20%.

Inductance values are given within ± 2%.

Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.

Inductance Values up to 400 Henries can be supplied.

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

$$V = K \frac{\sqrt{LH}}{1H} X \frac{FKC}{1KC}$$

K — a constant listed in every chart
LH — inductance in Henries
FKC — frequency in kilocycles at which the measurements were made.

2. Variation of inductance versus normalized Direct Current.

The normalized DC is given by

$$In = Idc\sqrt{LH}$$

where Idc is the dc current in MA
and LH the inductance in Henries.

3. Variation of Inductance versus normalized AC voltage.

The normalized AC voltage is given by

$$Vn = \frac{V}{\sqrt{LH}} X \frac{60}{Fcps}$$

Vn — normalized AC voltage
V — voltage across the coil
LH — inductance in Henries
F — frequency of measurement in cps.

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed Toroids are available in three types of construction. Open units coated with a special high temperature, extremely low loss compound, hermetically sealed or molded in special Freed epoxy resin. Both hermetically sealed and molded units meet the latest military specification.

Freed toroidal inductors are supplied with either molypermalloy cores or special powdered iron cores. The catalog items with the letter "S" added to the type designations are wound on temperature stabilized cores.

SB indicates temperature stability of ±0.1% from +13°C to +35°C
SD indicates temperature stability of ±0.1% from −1.5°C to +54°C
SW indicates temperature stability of ±0.25% from −54°C to +85°C

The "Q" values given in the individual graphs are accurate within ± 10% for hermetically sealed and molded units. For open units the "Q" tolerance is ± 20%.
All Toroids are adjusted at frequencies well below their self-resonant frequency, f_0.

The apparent inductance at any frequency f is given by the expression

$$L_{app} = \frac{L}{1-\left(\frac{f}{f_0}\right)^2}$$

where L is the nominal inductance.
For frequencies well below the resonant f_0 the fractional increase in inductance due to the distributed capacity C_0 is approximately

$$\frac{\triangle L}{L} = \left(\frac{f}{f_0}\right)^2 = \Omega^2 L C_0$$

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" vs. frequency was measured with voltages given by the expression

$$V = K\sqrt{LH} \times \frac{FKC}{1KC}$$

where K is a constant listed on every chart
LH is inductance in Henries
FKC is the frequency in kilocycles at which the measurements were made.

2. Variation of inductance vs. normalized Direct Current. The normalized DC is giben by:

$$I_{norm.} = I_{dc}\sqrt{LH}$$

where Idc is the DC current in the coil in MA., and LH is the inductance in Henries.

3. Variation of Inductance vs. normalized AC voltage. The normalized AC voltage is given by

$$V_{norm.} = \frac{V}{\sqrt{LH}} \times \frac{60\text{ cps.}}{F\text{ cps.}}$$

V is the voltage across the coil
LH is the inductance in Henries
F is the frequency of measurements in cps.

For high frequency Toroids the above expression is changed to

$$V_{norm.} = \frac{V}{\sqrt{LH}} \times \frac{1KC}{FKC}$$

Toroids with special requirements, tapped Toroids and toroidal transformers can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm up time, long life components, ease of signal mixing, and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

The MAO line of single ended magnetic amplifiers provides a single stage of DC controlled amplification, utilizing positive feedback to obtain a gain much higher than that of a saturable reactor.

The MAP line of push-pull magnetic amplifiers features high gain, polarity-sensitive amplification, and a phase reversible output.

The MAF type of fast response magnetic amplifiers combines high power gain, ruggedness, and reliability with a maximum 2 cycle response. All MAF units are phase-reversible.

The MAS line of saturable transformers, commonly controlled by dual-triodes or transistors, emphasises low cost, small size, extreme reliability (no rectifiers), and phase-reversiable output.

All standard units are designed for continuous operation and will operate in an ambient temperature range of − 55°C to + 75°C.

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors, and magnetic components.

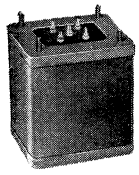
SERIES 1950 NULL "T" FILTERS



The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs co pletely cancel each other at the balance frequency. They may be used as rejection networks particularly at lo frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network w give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

MINIATURE FILTERS

Freed standard filters are **hermetically sealed,** miniature high performance components designed for production and laboratory applications in the electronics and communications industries.

To achieve attentuation characteristics not obtainable with one single filter several standard filters of different transmission characteristics can be combined. Wide band characteristics can be obtained by combining low and high pass units.

The astatic construction of inductive components together with special shielding reduces the hum pickup of standard filters to extremely low levels.

Standard filters with low pass, high pass and band pass characteristics are available.

The attenuation characteristics of these filters are:

Low Pass Filters 6 db at cut-off frequency.
35 db at 1.5 times cut-off frequency.
40 db at twice the cut-off frequency.

High Pass Filters 6 db at cut-off frequency.
35 db at 67% of cut-off frequency.
40 db at 50% of cut-off frequency.

Band Pass Filters 2 db at ±3% of center frequency.
40 db at one half and twice the center frequencies.

ULTRASONICS

New developments and applications of ultrasonics for industrial cleaning, soldering, welding, and mixing have created a demand for generators and components specifically designed for ultrasonic applications.

Using the latest developments in the field of special magnetic materials the FREED ultrasonic transformers are designed for greatest efficiency and maximum reliability. They feature small size, excellent performance and long life under continuous duty operation.

To save development time complete kits designed for ultrasonic electronic generators, amplifiers (from 100 watts to 1 KVA) and transducer bias supplies are available. These kits include all necessary reactive components and are supplied with a complete schematic.

A 250 VA ultrasonic amplifier is available from stock. (Completely wired).

Transformers with an extended frequency range (frequencies up to 2 MC) can be supplied upon request.

Extensive engineering and laboratory facilities are available for consulting, development and research in components for ultrasonic generators and amplifiers.

MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two indentical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

JAF SERIES—HERMETICALLY SEALED

These tiny transformers are hermetically sealed to MIL-T-27 requirements and are encased in standard military AF cans deep-drawn from "Trialloy" nickel alloy magnetic shielding material. Wide frequency range is consistently achieved by layer wound coils of extremely fine wire.

HIGH FIDELITY OUTPUT TRANSFORMERS

TRIAD "HS" Series Output Transformers represent the application of the most modern techniques in the design of fine audio equipment. Use of annealed grain-oriented core materials, combined with multiple interleaved coil structures, have resulted in an open circuit inductance to leakage inductance ratio of 10,000, representing a frequency response range of better than 13 octaves. These transformers will deliver full rated power output within 1 db. from 7-50000 cycles. Full DC plate current can be carried through the primary windings, but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

POWER
Combined PLATE and FILAMENT Transformers
Primary 115 volts 50/60 cycles

All types are "Climatite" treated, both coil and core, for protection against moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keep losses to a minimum and hold temperature rise below 55° C. Only copper foil static shields, grounded to the case and core, are used. Leads are of a type approved by UL for high temperature operation.

INSTRUMENT POWER

Instrument POWER SUPPLY Transformers

Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fields by minimum flux density, multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

PULSE

These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time (.03 microseconds) makes them exceptionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely necessary for long shelf life).

Type No.	Application
PL-4	2 equal windings. Pulse width .35 to 1.2 microseconds. Duty cycle .01 max. Dimensions .4" dia. by .625" long.
PL-5	3 equal windings. Pulse width .35 to 1.2 microseconds. Duty cycle .01 max. Dimensions .5" dia. by .68" long.
PL-6	3 equal windings. Pulse widths .35 to 1.2 microseconds. Duty cycle .01 max. Dimensions (Transformer only) 1" dia. by ¾" long. Mounts with 8-32 x ½" stud.

FILAMENT

Electronic tubes, as used in most equipment, operate with filaments on continuously. Filament transformers should then be designed for low temperature rise under continuous operation, good regulation, minimum size, and long life. Triad filament transformers meet all these requirements. All units are "Climatite" treated, both coil and core, for moisture protection and elimination of lamination noise. All types are permanently marked with connection data and cased types are beautifully finished in grey baked enamel. Only the highest quality of materials are used to permit rated output in minimum size.

REPLACEMENT POWER

Triad replacement power transformers are designed as closely as possible to meet the electrical and physical specifications of the transformer for which they are a replacement. Where possible, these transformers take advantage of better materials to operate at a lower temperature and thus to increase effective life. All Triad replacement power are "Climatite" treated, both coil and core, for moisture protection and elimination of lamination chatter. All are beautifully finished in grey baked enamel and are permanently marked with connection data. Copper foil static shields are used for maximum isolation. Leads are of a type approved by UL for this service.

PLUG-IN INPUT Transformers

These are high-quality input transformers with a high degree of magnetic shielding and are designed to couple low-impedance microphones or magnetic heads to amplifier input. They are equipped with nine prong plugs to prevent possible insertion in tube sockets and to match the sockets on many commercial amplifiers.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +85%, −45% from mean value is obtainable. Range is covered in 600° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1 1/32" long, 1 1/4" wide and 1 7/16" high with mounting centers on terminal board side 1 3/16" by 2 9/32", tapped for 4-40 screw. Weight is 5 1/2 oz.

UTC variable inductors have served as the ideal solution to many filter, oscillator, equalizer, and tuned amplifier problems—for over a decade. Extended development has now made possible the new HVC series of inductors with improved characteristics. They are hermetically sealed to MIL-T-27 specs . . . extremely compact . . . wider inductance range . . . higher Q's . . . lower and higher frequencies . . . superior voltage and temperature stability.

Adjustment of set screw in top of case permits changing inductance + 200%, −70% of nominal value shown. Range is covered in 900° rotation. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical HVC unit. Case dimensions are 1 1/8" long, 2 5/32" wide, 1 7/32" high. The two terminals and two 4/40 mounting studs are on opposite diagonals — 1 5/16" spacing.

NEW "M" TYPE TOROIDS

(Hermetically sealed to MIL-T-27A specs.)

MAXIMUM Q
MINIMUM SIZE

UTC UNITED

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The **MQ series** of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are **hermetically sealed** to MIL-T-27 Specifications . . . laboratory adjusted to 1% tolerance—0 DC.

The **stability** is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency, temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

Other values of inductance than those listed are available on special order at the price of the next higher listed value. Uncased and molded toroids or glass solder seal terminals available on production orders.

UTC LOW FREQUENCY HIGH Q COILS

(Hermetically sealed to MIL-T-27A Specs.)

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of −55°C to +85°C. A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections. Drawn case $1\frac{13}{16}$ x $1\frac{13}{16}$ x $2\frac{1}{2}$ high, 1 lb.

HIGH Q PRECISION INDUCTANCE DECADES

UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than 1% precision. Die cast case $4\frac{1}{2}$ x $4\frac{3}{8}$ x $2\frac{3}{8}$, 2 lbs.

DI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use. Ganging panels are available for mounting two, three, or four decades together. It is merely necessary to unscrew the four rubber feet at bottom of decade to attach to panel.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attentuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms. **LMI** units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms.

HML (High Pass), and **LML** (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms. **BML** (Band Pass) have input of 500/600 ohms, output to grid.

All of the standard filters are housed in **hermetically sealed** cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the six types are available as **special units** for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI 2800, designating low pass interstage filter—2800 cycles cutoff frequency. These special units are priced at $35.00 net. If preferred, glass solder seal terminals available on production orders.

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27 and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the MAGNETIC STRUCTURE is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift. (The chart values shown are approximate.)

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

The wide variety of "H" series filament transformers listed cover virtually every military and **industrial** need. Conservative design provides maximum reliability through low temperature rise and high insulation safety factor. Except for H-128 and H-129 which have terminals opposite mounting, all units are in MIL cases with rugged internal construction, stainless steel studs. Regulation has been a fundamental design consideration to provide for the diverse applications in which these units may be employed.

HERMETIC AUDIO COMPONENTS

For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to MIL-T-27A specifications, which are now catalogued as UTC stock items.

Terminals on items H-20 through H-24 are neoprene-ceramic assemblies. All other units employ glass bead headers, but can be supplied with neoprene-ceramic terminals where required. **For printed circuit use,** wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders.

The **frequency response ratings** are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown.

The **level ratings** are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.

The **impedance ratings** are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

UTC Deci-Ouncer Transformers
... DOTS FOR SHORT
REVOLUTIONARY TRANSISTOR* TRANSFORMERS

UTC has been the leader in miniaturization for over twenty years. In view of this, it was surprising to many people that UTC did not quickly bring out a series of transformers designed for use and comparable in size to transistors. Unfortunately, extremely miniature transistor transformers of standard construction had poor general characteristics, poor reliability characteristics, and were woefully inadequate for a large number of applications. Instead, UTC started a development program to evolve a new transistor transformer structure designed to provide full performance in extremely miniature size. The culmination of this development is found in the new DOT series**. Listed below are the standard types of DOTS now being made and curves showing their general characteristics in typical transistor application. To fully appreciate the unprecedented performance of these revolutionary transistor transformers, the curves also show characteristics of similar size units now on the market.

Special DOT units (some even smaller in size) are available on production order.

OUNCER AUDIO UNITS

STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing ⅞" diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately 1 DB from 30 to 20,000 cycles, except for 0-14, 0-15, and units carrying DC which are intended for voice frequencies. Maximum level +8 dbm.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

SUBOUNCER UNITS

FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

LINEAR STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

ULTRA COMPACT AUDIO UNITS

The **UTC Ultra compact** audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level +7 DB.

HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

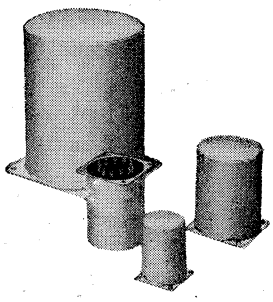
COMMERCIAL GRADE COMPONENTS



The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear. ± 1½ DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

CGE-1A Panel Dim. 2⅜" x 3½" x 2½" deep. Wt. 2 lbs.

DYNAMIC NOISE SUPPRESSION INDUCTOR

Incorporates two accurate High Q coils [.8 hy. and 2.4 hy.] for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, .4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5, 5, 5.5, 6, 6.25, 6.6, 7, 7.5, 8, 9, 10, 11, 12, 14, 15, 16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75.

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

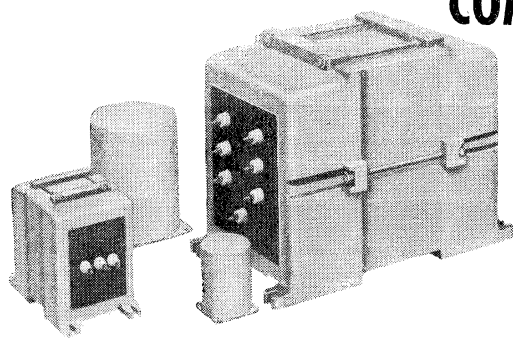
COMMERCIAL GRADE COMPONENTS



UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees C. Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate transformers are given a surge test of 250% normal voltage at 200 cycles. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load.
The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

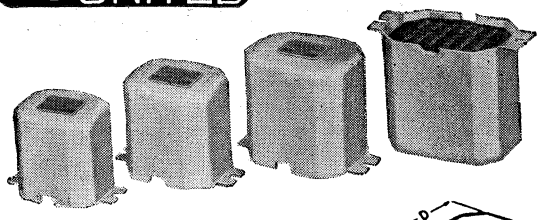
SPECIAL SERIES AUDIO TRANSFORMERS



UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or H grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

REPLACEMENT TYPE COMPONENTS

UTC replacement type transformers (Pri. 117 V. 50/60 cycles) represent the culmination of years of development in this field. All units are low temperature rise, vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolsis. Shells and brackets are finished in attractive high lustre black enamel.

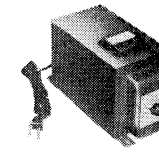
LINE VOLTAGE ADJUSTERS WITH METER

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage.



These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly.

The nine tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output models.

All units are designed for 50/60 cycle service and come complete with 6 foot input cord and plug and outlet receptacle.

Over-voltage connection (0 to 17% above line voltage) or line voltage connection is available to the user by the type of connections made, however, line voltage connection on Types 1500B and 1520B must be specified.

† Ganged units of these types when connected for over-voltage operate from 60 cycle service only.

‡ Output current reduces to approx. 44% at full voltage.

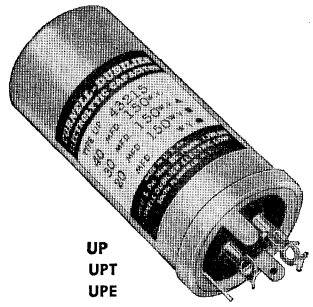
TWIST-PRONG BASE ELECTROLYTICS



Types UP, UPT and UPE are small round-can electrolytic units provided with mounting prongs that can be securely locked into position on the chassis. Each unit is furnished with a bakelite and a metal mounting washer.

- ◆ Wide Temperature Range
- ◆ Stable Capacitance
- ◆ High Ambient Temperature Stability.
- ◆ Special Unit for Selenium Rectifier Circuits

Popular replacement unit for standard TV receivers, radios, amplifiers and similar equipment.§

Type UPE is especially designed for SELENIUM RECTIFIER circuit applications. ONLY TYPE UPE SHOULD BE USED FOR THIS SERVICE. These types are indicated by the prefix "X" in the Rotational Stock Number listings. NOTE:—A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect the rectifier and filter capacitors.

NEW simplified *Rotational Stock Numbering System* lists units in sequence according to their capacitance and voltage rating. Arrangement on shelf by Rotational Stock No. permits quick selection of desired unit.

TEMP. RANGE: to incl. 475 V.D.C.W. +85°C.
over 475 V.D.C.W. +65°C.

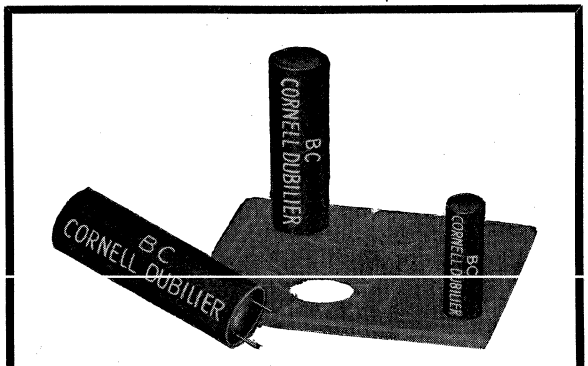
PHENOLIC-CASED PAPER TUBULAR FOR PRINTED CIRCUITS



TYPE BC

- PARALLEL LEAD WIRES: May be plugged directly into printed circuit.
- PRE-MOLDED PHENOLIC SHELL: No distortion and no stresses are set up because capacitor section is not subjected to molding pressures.
- WIDE TEMPERATURE RANGE: Vikane impregnated units (rated at 600 WVDC) will withstand operating temperature from —55°C to +100°C. Units impregnated with HT compound (rated at 400 WVDC and 200 WVDC) will withstand operating temperatures from —40°C to +90°C.
- POLYKANE FILL: Securely anchors leads, locks section in place and provides a barrier to moisture.
- SOLID CONNECTIONS: Leads are soldered directly to the extended foils for low resistance connections.
- STRONG CONSTRUCTION: Will withstand the extremes of soldering temperatures without damage to case material, moisture seal, lead connections or electrical performance.

CORNELL DUBILIER

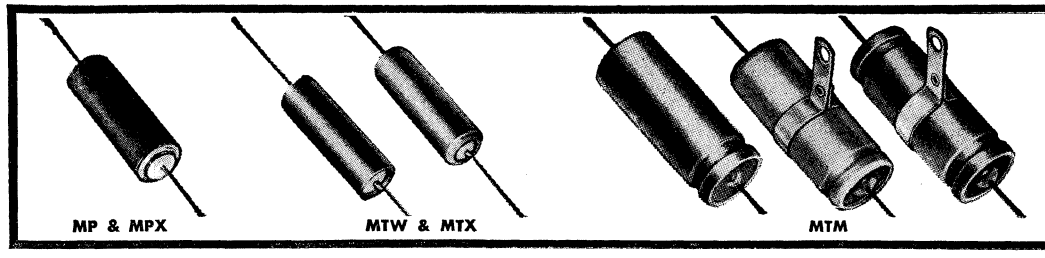
COMPACT METALIZED-PAPER CAPACITORS



Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder-seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE: —40°C to +60°C.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

TYPE 5R

Types 1R, 1DR, and 5R "Silver-Mike" silvered mica capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, push-button tuning circuits and other similar applications. Standard units are molded in low-loss red plastic.

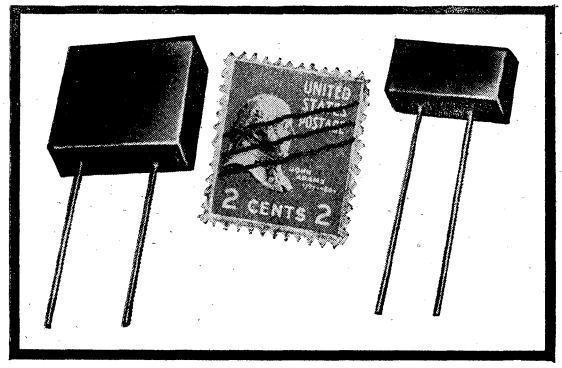
CORNELL DUBILIER

"Super MICADON"
ENCAPSULATED Molded-Case MIDGET MICA CAPACITORS



Cornell-Dubilier "SUPER MICADONS" represent an entirely new conception in Midget Mica Capacitor construction. The vastly improved design and construction of the new "C-D SUPER MICADONS" now makes it possible to produce miniature units of greatly increased capacitance and superior quality over conventional units of the same case size. Every characteristic desirable in a mica capacitor has been incorporated into one compact, miniature sized unit. No mica capacitor of *conventional* design has achieved this comprehensive quality.

ERIE RESISTOR CORPORATION—ERIE, PA.

ERIE GENERAL PURPOSE CERAMICONS®

TYPES GP1 — GP2 — GP3

ERIE CERAMICONS are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

GP1 CERAMICONS — The performance specifications of Type GP1 Ceramicons are identical with those of temperature compensating types of Ceramicons. A GP designation does allow the capacitor manufacturer added flexibility in selecting ceramic body. These capacitors meet performance specifications of RETMA Standard No. REC-107-A, Class 1, Characteristic U2.

GP2 CERAMICONS — The capacitance of GP2 Ceramicons will not vary more than + 10% or − 35% from + 25°C. value, as the temperature is varied from − 40°C. to + 85°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Y5Y.

GP3 CERAMICONS — The capacitance of GP3 Ceramicons will not vary more than + 25% or − 50% from the 25°C. value, as the temperature is varied from + 10°C. to + 75°C. These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Z5Z.

For Dimensions see page 5 of this Catalog.

"GP"® GENERAL PURPOSE CERAMICONS

are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important — in other words for all receiver applications except in frequency determining circuits. Working voltage — 600 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

Available in both molded and phenolic insulated styles

TEMPERATURE COMPENSATING CERAMICONS®

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

NPO TEMPERATURE COEFFICIENT CERAMICONS®

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage — 600 volts D. C. **Recommended as replacements for silver-mica capacitors.**

PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

1. $\frac{\text{(Capacitance in MMF) (Temp. Coef. Required)}}{*750}$ =

   Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

2. (Total Capacitance Required) minus the value found in step 1 = capacitance in MMF of the NPO unit to be used.
3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

ERIE HIGH VOLTAGE DISC CERAMICONS®

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

ERIE CERAMICON® TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

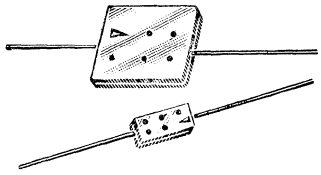
CORNING GLASS WORKS ELECTRONIC COMPONENTS

CORNING FIXED GLASS CAPACITORS



CONFORMS TO MIL-11272-A SPECIFICATIONS

Glass dielectric material is formed as homogeneous, continuous ribbon. The properties of the capacitor are those of the closely controlled dielectric, and are not determined by assembly method or affected by any subsequent treatment. Offers a higher degree of miniaturization and maximum reliability and electrical stability at high temperatures.

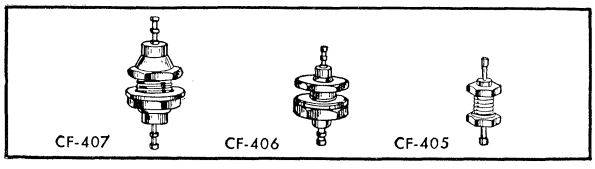
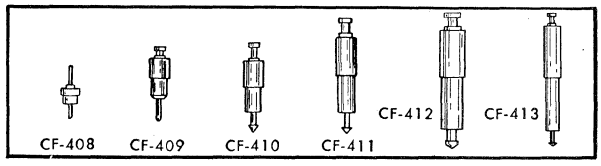
ERIE TEFLON FEED-THRU INSULATORS

CF-405 SERIES



Series CF-405 Feed-Thru Insulators have a hollow threaded metal body which fits through the bed plate and is secured by a hex nut.
The terminal, which passes through the hollow body, is spaced by a force-fitted Teflon plug.
These Feed-Thru Insulators combine the unsurpassed insulating properties of Teflon for high frequency, high temperature, high voltage service with mechanical ruggedness unusual in miniature insulator design.

CF-408 SERIES



Teflon Miniature Feed-Thru Insulators, compression type, are force-fitted into mounting holes, are self-fastening and self-sealing. No additional hardware is required for assembly.
The resiliency of the Teflon bodies insures against breakage in assembly and transit, and offers shock-proof and vibration-proof durability in service. Hand tool for mounting available.
Teflon's unexcelled electrical properties for high frequency, high temperature and high voltage use, unaffected by a wide range in ambient temperatures, pressure, altitudes and humidity, recommend them for critical circuits.

XT Type Tantalum Capacitors

Application—Originally designed to meet the exacting requirements of geophysical, well drilling and other applications where a ruggedly constructed, hermetically sealed electrolytic capacitor was necessary. The possible applications for the present models of the Mallory tantalum capacitors are unlimited in circuit designs requiring rugged use and wide variations in temperature.

Description—The Mallory metal encased tantalum capacitor is the answer to applications calling for a capacitor designed to withstand temperatures ranging from −55°C. to +200°C. The XT type is enclosed in a hermetically sealed steel case which will withstand 100 hours of 20% salt spray at 95°F without harmful corrosion. The case is sealed with a glass-to-metal end seal.

The standard case diameter for all XT types is ⅜". The height will vary from ½" to 4 1/16", depending on capacity and voltage ratings.

Terminals—Provided with a wrap-around terminal for easy soldering.

Mounting—Mounting hardware is not supplied with the capacitor. The variety of applications for this capacitor is not conducive to a single means of mounting. Insulating material, such as Teflon, etc., should be used between the capacitor and mounting bracket where the cathode is not at chassis potential. CAUTION: Soldering to any part of the case is not recommended.

For 100% Environmental Testing add $1.55 each for any quantity

Prices are for 175°C. maximum. For 200°C. ratings, add "X" to part number and add 10% to base price. i.e.: XTL-120 becomes XTLX-120

Cathode Tab can be supplied at no extra charge—add "A" to part number. i.e.: XTL-120A

Mallory Type TAW and TAP Silverlytic Capacitors

Application—Designed for those who need an extremely small (subminiaturized) capacitor for transistor applications.

Description—The Mallory type TAW and TAP Silverlytic Capacitors are the result of intensive development and research and are designed to meet the most rigid specifications for performance, stability, and reliability. They are premium capacitors, ruggedly constructed and capable of giving a performance equivalent to standard electrolytics of conventional size. They possess extremely long operational life, double seal construction, "a case within a case," and excellent low temperature characteristics. Operating temperature for the TAW Silverlytic ranges from −55°C. to +65°C., and for the TAP Silverlytic operating range is −55°C. to +85°C. DC leakage is less than 1 microampere after 10 minutes of rated voltage. Capacity tolerance for the TAW is −15% to +100%, and for the TAP −15% to +75%.

Terminals—Axial leads 1½" long, tinned for easy soldering.

Mounting—Designed for mounting with attached leads.

Packaging—5 units per display carton.

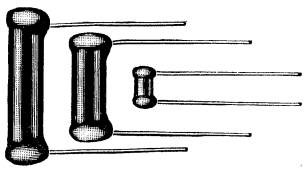
Fixed Ceramic Capacitors

(Voltage Rating—600 VDC)



Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from −55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bare, tinned-copper leads approximately 1¼" long.

Voltage Rating—600VDC.

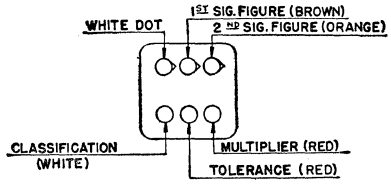
Instructions for use of RETMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RETMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.



Example shown above = 1300 mmfd. ±2% , 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*
Black	0	1	±20%	A
Brown	1	10		B
Red	2	100	± 2%	C
Orange	3	1000	± 3%	D
Yellow	4	10000		
Green	5		± 5%	
Blue	6			
Violet	7			
Gray	8			I
White	9			J
Gold		0.1		
Silver		0.01	±10%	

* Denotes various electrical characteristics.
Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

WIDE TEMP. RANGE

There are many kinds of capacitors . . . some stable . . . or rugged . . . or vaporproof . . . or tiny . . . some very good at averting loss or noise . . . or efficient over a wide temperature range. Some capacitors combine two, or even three of these features.

"VITRAMON" Capacitors Give You All 7

Only two materials go into "VITRAMON" Capacitors . . . porcelain enamel for the dielectric and encasing insulation . . . fine-silver for the electrodes. Perfectly bonded, the two become, effectively, one homogenous unit —

Stable over a Wide Temperature range.

The solid black of "quality crockery" in which the silver electrodes are immersed makes "VITRAMON" Capacitors both

Rugged and varporproof.

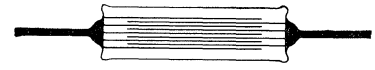
Pure materials plus perfect bonding combine to eliminate both

Loss and Noise.

Finally . . . their unique construction allows for "layering" the electrodes so that much greater active dielectric area can be squeezed into the same cubic content . . . They're

Miniature.

Only "VITRAMON" Gives You All 7



Two materials — a monolithic block of porcelain enamel and fine-silver electrodes — fused into one strong, stable, efficient and effectively homogenous unit.

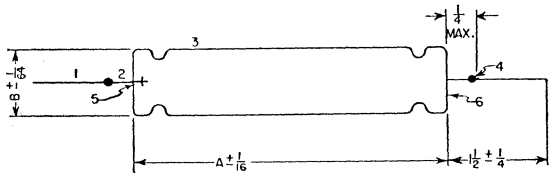

Fig. 1. Outline diagram

The Tantalytic capacitor is designed for certain direct-current applications up to 150 WVDC where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior characteristics and ultimate size reduction in the high-quality electrolytic field are of prime importance.

This capacitor is a tantalum-electrode electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum. The Tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (—55 C to +85 C), without derating, than the conventional aluminum electrolytic capacitor.

Both polarized- and nonpolarized-type capacitors are available. Polarized types are suitable for applications where no reversal of potential occurs. Nonpolarized units are for use in applications where reversal of potential does occur. However, the cathode (negative) electrode in the polarized type is formed to 3.75 volts as protection against small reversals.

Tantalytic capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

These capacitors are available in either plain or etched tantalum foil. Advantages of each and a comparison thereof appear in the specifications, GET-2333.

MICRO-MINIATURE TANTALYTIC CAPACITORS

Micro-miniature Tantalytic capacitors are designed for low-voltage d-c applications where long shelf life, electrical stability, and ultimate size reduction are of prime importance. Widely used in hearing aids and other subminiature assemblies employing transistors, micro-miniatures are rated as high as 4 volts, 8 μf in the $\frac{5}{16}$-inch case; higher ratings can be achieved in the $\frac{1}{2}$-inch case. Capacitance tolerance for all units is —0% +200%.

The micro-miniature employs a tantalum anode enclosed in a silver case and impregnated with a nonacid electrolyte. A synthetic plug is roll-crimped into the end of the case and a solderable tin-coated nickel lead is lap-welded to the projecting tantalum anode lead. This permits connection up to the bushing. The case itself is the cathode and is equipped with a tin-coated nickel lead soldered to the case. The unit is of the polarized type.

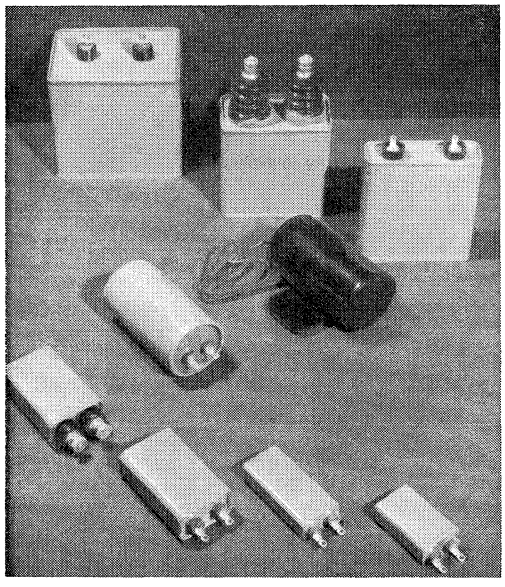
STANDARD COMMERCIAL TYPES

For A-c and D-c Applications — Fixed Paper-dielectric Capacitors



A-c/d-c dual-rated Pyranol capacitors for motors, controls, luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol, its use as a treating material has made possible a capacitor which is much smaller in size, and far superior to those formerly available.

Design Advantages

(1) Units are small and compact, because of the use of Pyranol.

(2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.

(3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

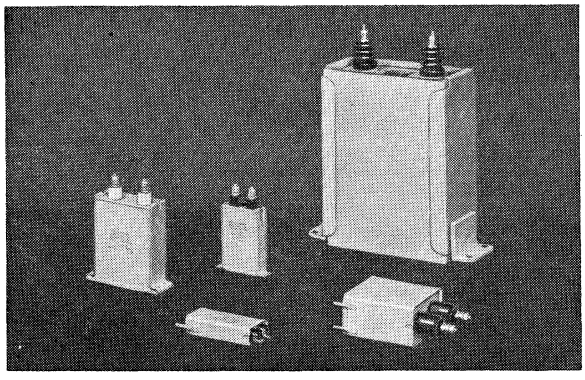
Case Style 70



Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-capacity construction, with a capacitance tolerance of ±10 per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

insulator terminals are made of molded phenolic or porcelain of the highest quality. All bushings are thoroughly bonded to the container to provide a permanent liquid-tight seal.

All units can be supplied with removable mounting brackets. Both spade-lug and L-type are available. Brackets can be attached to either the top or the bottom of the units to permit upright or inverted mounting.

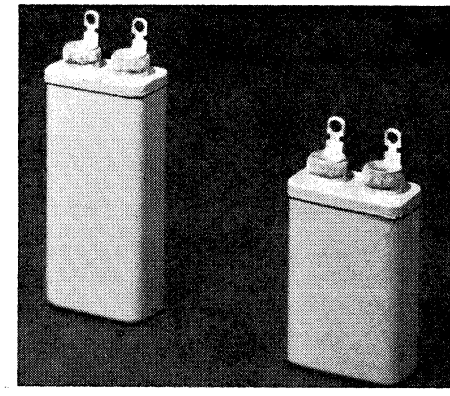
Case Style 60



These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Removable-type mounting lugs are of very sturdy construction.

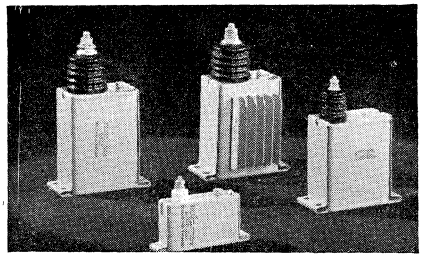
These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep-drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

NOTE: Case styles 50, 60, and 70 capacitors are also available to MIL-C-25A Specification.

CAPACITORS FOR OSCILLATOR TANK CIRCUITS



This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance (0.01 μf) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

features

- Hermetically sealed in metallic cases.
- Single-bushing construction for minimum size.
- Removable mounting brackets.
- Internal lead connections arranged for minimum inductance.

SPRAGUE CAPACITORS

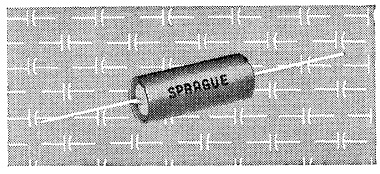
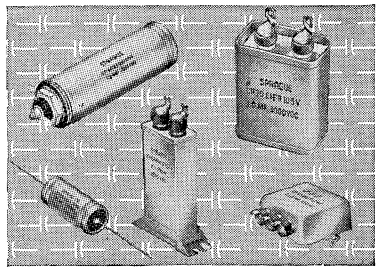
INDUSTRIAL AND MILITARY ITEMS AVAILABLE THRU YOUR SPRAGUE APPOINTED INDUSTRIAL DISTRIBUTOR

The capacitors, resistors, and filters mentioned on this page will be of special interest to Engineers and Buyers of components for industrial and military applications. Complete listings of ratings, sizes, availability of items etc., can be furnished by your Sprague. Appointed Industrial Distributor. Write to Sprague Products Company North Adams, Massachusetts for the name of the one nearest you.



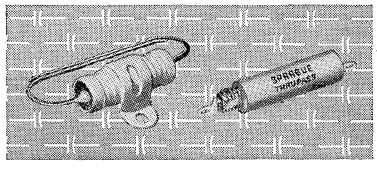
SUBMINIATURE PAPER CAPACITORS

Electrically and mechanically designed to meet stringent operating requirements. Hermetically sealed in metal cases. A variety of mounting arrangements are available. Can be had in grounded or ungrounded cases, with inserted tab or extended foil construction. Available with stabilized wax or Vitamin Q® impregnants. High insulation resistance. To 125°C operation.



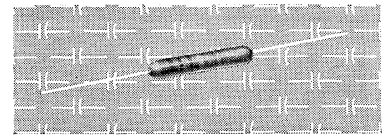
PAPER CAPACITORS TO MIL-C-25A

Types CP25, CP26, CP27, CP28, CP29 tubulars. Types CP40, CP41 cylindricals. Types CP53, CP54, CP55 "bathtubs". Types CP61, CP63, CP65, CP67, CP69 small rectangulars. Type CP70 large rectangulars. Made in accordance with military specification MIL-C-25A. Hermetically sealed in metal cases. Impregnated with specially-processed mineral oil. Available in Characteristics E and K.



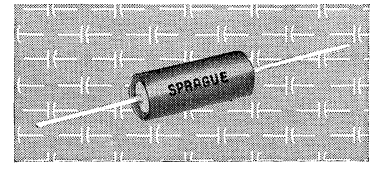
HYPASS® AND THRU-PASS CAPACITORS

3-terminal network "feed-through" units for high frequency filtering applications in communication and radar equipment, etc. Connected in a circuit in a manner similar to low pass filters. Terminals are connected in series with the circuit to be filtered and the case is grounded. Extremely low inductance to ground. Hermetically sealed in metal cases. High insulation resistance. Minimum capacitance change with temperature.



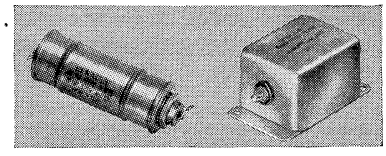
PROKAR® MOLDED CAPACITORS

Developed for use where small capacitors are required to operate continuously at high temperatures. Impregnated with exclusive material which polymerizes to solid resin. Molded in mineral-filled plastic. Will operate over a temperature range of −55°C to +125°C. More stable performance, in smaller sizes, at higher temperatures than any other capacitor of type.



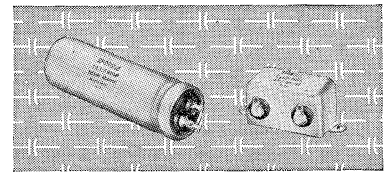
METALLIZED PAPER CAPACITORS

Hermetically sealed in metal cases. Unusually high insulation resistance and long life. Two types, for operation to 85°C and 125°C. Because Sprague metallizes its own paper, quality is carefully controlled in every operation, resulting in superior performance. Available in a wide variety of mounting styles.



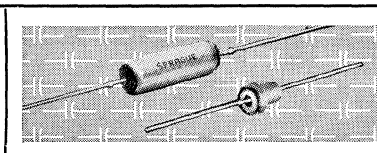
RADIO INTERFERENCE FILTERS

Designed for aircraft and mobile electrical and electronic equipment. These high insertion loss noise filters are smaller in size, weight, and volume than previous designs, without any sacrifice in performance. Hermetically sealed in cylindrical or "bathtub" metal cases. Filter types available for low-current applications, ac-dc applications, power supply applications, auto applications, high-current applications, etc. Current ratings from 0.1 ampere to 50 amperes.



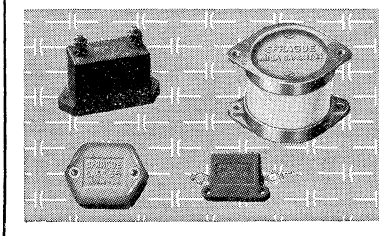
"LYTIC" CAPACITORS TO MIL-C-62A

Suitable for use in filter and bypass circuits where excesses of capacitance over nominal rating can be tolerated. Available in a variety of operating temperature ranges. Made in accordance with military specification MIL-C-62A. Special etching and formation techniques and high-stability oxide film are unmatched for long shelf life. These units will withstand high temperatures, high surge voltages, and high ripple currents.



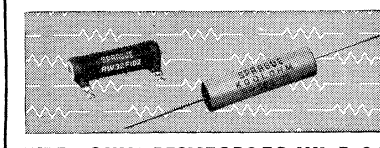
TANTALEX® TANTALUM CAPACITORS

Miniature d-c electrolytics for operation from −55°C to +85°C. Intended for low-voltage applications where small size and stable electrical characteristics are required. Extremely low leakage current, low power factor, small capacitance drop-off at low temperatures. Tantalex capacitors exhibit virtually no shelf aging. Ratings in voltages from 3 vdc to 150 vdc.



MICA CAPACITORS TO MIL-C-5A

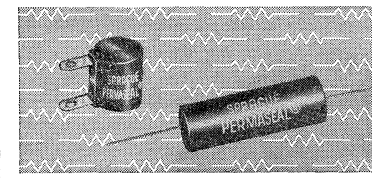
Ear-mounting Types CM45, CM50. Semi-hexagona Types CM55, CM60. Molded case potted Types CM65, CM70. Stack-mounting ceramic case Types CM75, CM80, CM85, CM90. Made according to military specification MIL-C-5A.



WIREWOUND RESISTORS TO MIL-R-26B

Vitreous enamel Blue Jacket® Types RW29 through RW47. Blue Jackets meet severe humidity tests of MIL-R-26B for characteristics G and V. Thermal expansion characteristics of winding cores, terminal bands, and coating enamel are closely matched.

Ceramic-jacketed Koolohm Types RW50 through RW56. Koolohm "tropicalized" ceramic outer shell enables resistors to withstand humidity tests for characteristics G and J. Can be mounted against live or grounded parts with absolute safety.



PERMASEAL® PRECISION RESISTORS

For 85°C and 125°C ambient temperatures. Designed for applications which require highly accurate resistance values in small physical sizes. Standard resistance tolerance ±1%. Closer tolerances available upon request. Carefully aged for maximum stability. Available with radial tab or axial lead terminals. Will meet severe humidity requirements of MIL-R-93A.

TC TEMPERATURE COMPENSATING TUBULARS

Designed especially to limit frequency drift in r.f. circuits where temperature variations are prevalent. These capacitors are constructed with a ceramic body which changes capacities as the temperature varies. Use Centralab TC Hi-Kaps when servicing superhet receivers — replace older types in oscillator and detector circuits in TV, AM and FM receivers. 1,200 volts D.C. test; 600 volts D.C. working. Comply to JAN-20-A specifications.

TCZ TUBULAR HI-KAP®

All TC Hi-Kaps conform to JAN-C-20A specifications. NPO Units (JAN-CH-CJ-CK) which show zero capacitance change over temperature range—20° C. to +85° C.

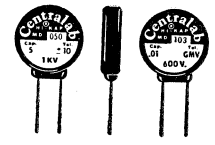
MOLDED DISC CERAMIC HI-KAPS®

For Bypass, Coupling and General Applications



Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown. Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating: 1,000 V.D.C.W. to 5,000 mmf, 600 V.D.C.W. over 5,000 mmf. Maintain high capacity and stand up under +85° C. operation. Insulation—Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at room temperature. Will not become brittle at —55° C. Leads — No. 22 tinned copper 1½" long. All units one size —1 1/16" diameter, 3/16" thick, maximum. Packaged — 5 units per polyethelene bag. 5 bags (25 units) per carton.

PACKAGED ELECTRONIC CIRCUITS (P. E. C.)®

Centralab Packaged Electronic Circuits have been proved by the performance of more than 60,000,000 now in use. Original-equipment manufacturers have marveled at the extremely low failure percentage of P.E.C.'s, as compared to individual standard components.

However, millions of old radio and TV sets were built before P.E.C.'s were used. Locating a shorted or intermittent component in these old-style circuits wastes valuable time.

Now, with a single Centralab P.E.C., you can replace an entire section of the circuit quickly and easily. You not only replace the one worn-out component — you automatically replace all components of the same age. That way, you make another set-owner happy in the long run and save yourself a costly call-back.

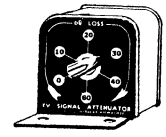
TV ATTENUATOR SWITCH CAT. No. PCH-4
PACKAGED ELECTRONIC CIRCUIT H PADS

The Centralab PCH-4 Television Attenuator Switch is designed as a service tool to determine the amount of attenuation required to secure best TV reception. It is also valuable for permanent installation in receivers. The switch incorporates Centralab's exclusive Packaged Circuit TV H-Pads.



ADVANTAGES OF SWITCH

The switching arrangement makes it possible to attenuate each station as much or as little as necessary depending on daily conditions such as weather or existing interference, and allows for proper attenuation to balance two or more stations. Switching also eliminates the "hit-or-miss" method of installing H-Pads. Switch is installed in series with 300 ohm — twin-lead. PCH-4.....List Price $7.50

ASK YOUR CENTRALAB DISTRIBUTOR FOR PACKAGED ELECTRONIC CIRCUIT GUIDE NO. 3

A practical working manual that saves you time and money. Shows circuit schematics that guide you in using P.E.C.'s to replace standard components. Gives other useful information.

STEATITE

Centralab has been producing fine ceramics since 1928 . . . primarily for its own use in fixed resistors, ceramic capacitors, switches, and more recently, packaged electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate. Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-5 Steatite, approved without limitation for Army and Navy use. Characteristics: Uniform, white appearance, high dielectric strength, exceedingly low loss at high frequencies, and strong mechanically. Impervious to moisture and common acids, will not warp, withstands high temperatures; harder than hardest quartz.

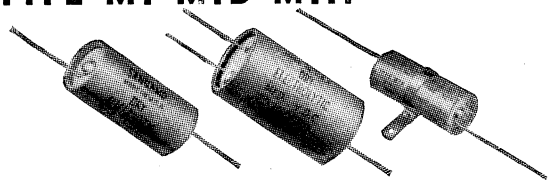
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE MT-MTD-MTH



SANGAMO Type MT electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE PL

FOR TELEVISION AND OTHER ELECTRONIC APPLICATIONS . . .

The SANGAMO Type PL electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

ELECTROLYTIC CAPACITORS

TYPE BTE

The SANGAMO Type BTE electrolytic capacitor is ideally suited for filter and bypass circuits in marine, aircraft, geophysical and many other applications. The Type BTE cartridges are first sealed in aluminum tubes and then encased in sturdy-corrosion-resistant, hot tinned steel cases providing a complete hermetic seal under extremes of weather conditions. All units are equipped with glass-to-metal sealed terminals. Mounting flanges with 3/16" holes are provided at each end.

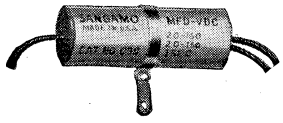
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE CS



The SANGAMO Type CS electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately 8 inches in length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

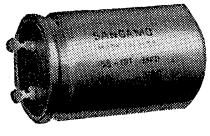
COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

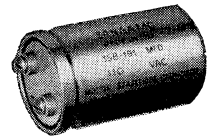
Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.T.M.A. Color code.

TYPE EM (MOTOR STARTING)





The SANGAMO Type EM electrolytic capacitor is a standard universal replacement for all motor starter types presently in use, and its dimensions are comparable in every respect. The Type EML is provided with solder lug terminals, the Type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types.

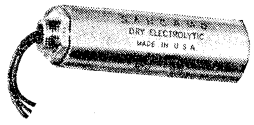
SANGAMO CAPACITORS

TYPE SL



Designed primarily as replacements for wet electrolytics, the Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy mounting to a chassis with the aid of a palnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

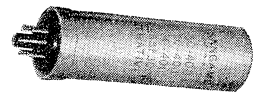
TYPE TS



Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and insure good contact with the socket terminals.

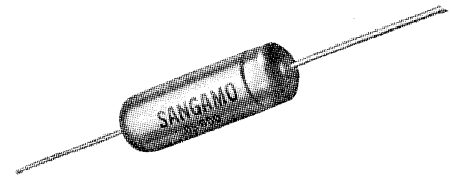
PLASTIC MOLDED TUBULAR



The SANGAMO is molded in Sangamo HUMIDITITE to provide more stable capacity values, unsurpassed moisture resistance, excellent seal characteristic, and operation up to 85°C. temperature. Small in physical size, and rugged in construction, this tubular is especially adaptable to television, auto radio, small AC-DC set, and other uses. The leads are firmly imbedded in the hard plastic case and have been especially designed to resist breakage. The "Telechief" assures operating dependability under extremes of heat, humidity and physical stress.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 71

SANGAMO Type 71 diaclor impregnated and filled paper capacitors have the advantage of light weight, and are smaller than the case size specified by MIL-C-25. Diaclor* is a specially compounded, chemically purified chlorinated dielectric oil. This synthetic impregnant, whose characteristics can be controlled with great uniformity, possesses a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is non-inflammable and non-explosive. Type A mounting brackets are supplied with each capacitor as standard equipment. If Type B or C brackets are required, they must be specified when ordering. Either composition rivet or stand-off porcelain terminals can be supplied, and the type desired should be specified.

SANGAMO CAPACITORS

NEW MOLDING COMPOUND FOR SANGAMO WIRE LEAD MICAS

All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at 90% to 95% relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micas, *under the same conditions*, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

PERFORMANCE

This circuit is used to supply a steady 300-volt dc source. Regulation is ±2% for line voltage variation of ±10% and load current variation of ±50%. Output impedance is greater than 0.5 ohm to 50 kc when the value of C3 is 8.0 mf (oil) and the load current varies between 100 and 200 ma. Maximum load current is 200 ma.

PERFORMANCE

This circuit is used to amplify and limit low level video signals. The output level is 2.2V for an input level of 0.6V. The limiting level is 4.2v. Rise time is 0.035 microsecond and droop is 3.5% for a 500-microsecond pulse.

P 1002	LOW LEVEL CATHODE FOLLOWER	POSITIVE PULSE 2.2V	POSITIVE PULSE 1.0V	MAXIMUM LEVEL 4.2V IN, 2.0V OUT	6385 2C51 OR 5670	+150 VDC @ 22 MA. —150 VDC @ 1 MA. 6.3V @ 300 MA.	$7.90

PERFORMANCE

This circuit is used for matching a low-level video source to a low impedance line. The operating levels are 1.0v output for an input of 2.2v. Maximum levels are 4.2 v input and 2.0 v output. Rise time is 0.002 micorsecond and droop is 1% for a 500-microsecond pulse.

P 1003	DUAL CATHODE FOLLOWER OR VIDEO MIXER	POSITIVE PULSE 0.4v to 14v	POSITIVE PULSE 0.35v to 11v	.4 to 14V	6385 2C51 OR 5670	+150 VDC @ 1 MA. 6.3V @ 300 MA.	$8.25

PERFORMANCE

This circuit is used to combine positive video signals or to match two high level video sources to loads greater than 10K. When used as a video mixer, the input levels are 0.4 v to 14 v and the output levels are 0.35 v to 11 v. The additive factor is 20% for 4.0 v inputs. Output impedance is 500 ohms. When used as a dual cathode follower, the input levels are 0.4 v to 14 v and the output levels are 0.3 v to 10 v. Output impedance is 1000 ohms. For either type operation, the rise time is 0.05 microsecond and droop is 2% for 500-microsecond pulses.

PERFORMANCE

This circuit is used to amplify intermediate-level video signals. With the two stages operating in cascade, the output level is 16 v with a 0.5 v input. Using only a single stage, the input range is from —2.3 v to +2.2 v. With one stage, input is applied to riser 3 and output taken from riser 5. The input capacity is 11 mmf and the output capacity 19 mmf. Rise time is 0.092 microsecond and droop is 1.5% for a 500-microsecond pulse.

P 1005	VIDEO DRIVER AMPLIFIER	POSITIVE PULSES 2.v to 15v	NEGATIVE PULSES 6.5v to 83v	2 to 15 VOLTS INPUT MAXIMUM OUTPUT 83 VOLTS	6385 2C51 OR 5670	+150 VDC @ 1 MA. —150 V @ 1 MA. 6.3V @ 300 MA.	$13.15

PERFORMANCE

This circuit is used to amplify video signals to a level sufficient to intensify and modulate a CRT cathode voltage. The output level is from 6.5 v to 83 v for an input level of 2.0 v to 15 v. Rise time is 0.05 microsecond and droop is 1.5% for a 500-microsecond pulse.

G 1001	MULTIVIBRATOR	——	260 VOLTS EXCLUDING ANY NEGATIVE OVERSHOOT	AS A PRF MULTIVIBRATOR	12AU7	+150 VDC @ 8 MA. 6.3V @ 300 MA.	$5.10

PERFORMANCE

This circuit is used as a moderately stable repetition-rate generator. The repetition-rate frequency is a function of the value of capacitors C1 and C2. Fall time is 0.4 microsecond (10% to 90% value).

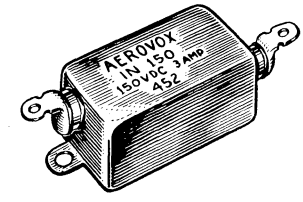
UHF-INTERFERENCE FILTERS

These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage d.c. applications. Also, for special applications such as battery or low-voltage d.c. filters, for shield room applications, and for critical equipment.



Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

R-F NOISE CAPACITANCE SUPPRESSORS

TYPE INA-116 TYPE INA-117 TYPE INA-118

These radio-noise suppression capacitors have been especially designed for use in military or commercial, aircraft and vehicular applications. Primary application is as an r-f bypass capacitor from line to ground in low voltage dc supply lines. Units are especially treated to assure extremely long, noise-free life.

Operating temperature range is minus 55 degrees C to plus 95 degrees C. For full 150 volt rating the operating temperature range is minus 55 degrees C to plus 50 degrees C. Units may be used at operating voltages up to 120 vdc over a temperature range of minus 55 degrees C to plus 71 degrees C; and 60 vdc over a range of minus 55 degrees C to plus 95 degrees C.

BUILT-IN FILTERS

High attenuation type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications.

Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast, shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and severe humidity tests must be met.

For single wire unbalanced applications. For two wire filtering use one filter in each line. Filter case must be securely bonded to the filter appliance and ground for maximum efficiency. These filters when used on high voltage AC should be used only on permanently grounded equipment.

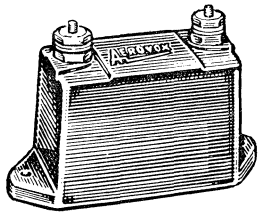
Potted Transmitting Capacitors

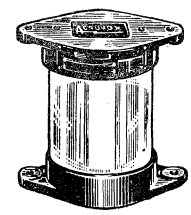
These potted transmitting capacitors in thermo-setting case materials have greater load-carrying capacity than molded-in-thermo-setting case material capacitors. Types 1550 to 1590, inclusive, not only have high voltage rating but afford higher current ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low-loss bakelite cases and permanently clamped with non-magnetic material.

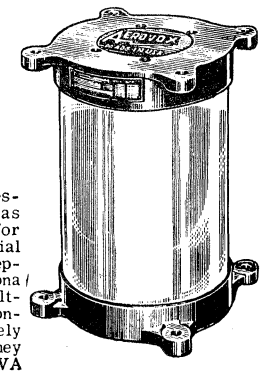


TYPE 1550L

TYPES 1940, 1950, 1960, 1970 and 1980

Stack-mounting Transmitting Capacitors





These stack-mounting transmitting mica capacitors are especially intended for various transmitting applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installation. They are made with a special cylindrical low-loss, glazed ceramic case providing a long creepage path between terminals. They are designed to eliminate corona losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively rated to withstand surge voltages above their rated values. They have extremely low power factor so that they can handle large KVA loads without overheating.

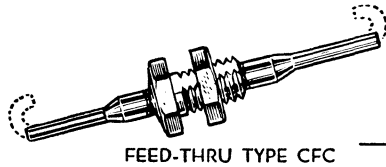
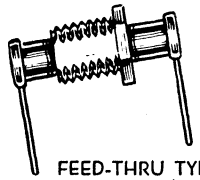
Hi-Q TUBULAR FEED-THRU CAPACITORS

EYELET FEED-THRU
TYPE EF



FEED-THRU TYPE CFC



FEED-THRU TYPE CF

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

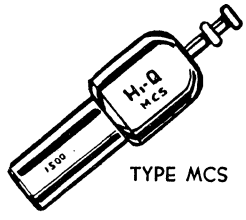
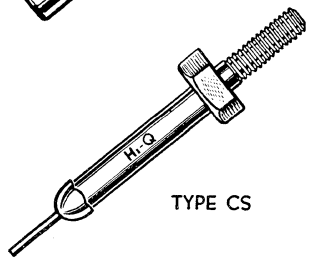
Hi-Q TUBULAR STAND-OFF CAPACITORS



TYPE MCS



TYPE CS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the installation resistance is above 7500 megohms.

Known the world over for their reliability under all operating conditions, EL-MENCO CAPACITORS are chosen by manufacturers who want successful performance and long life from their products.

EL-MENCO fixed mica dielectric capacitors are compact, precision made. Manufactured in accordance with American military standards to meet Army and Navy MIL-C-5A Specifications. All impregnated and MIL or RMA color coded. Standard specifications limits are shown.

Moulded in low loss bakelite, tested at double the working voltage. Tests for dielectric strength, insulation resistance, temperature co-efficient and capacitance drift, humidity and life tests according to MIL and RMA STANDARDS. All units are wax dipped for salt water immersion seal.

For low voltage circuitry, higher capacities are available at 100 VDCW rating.

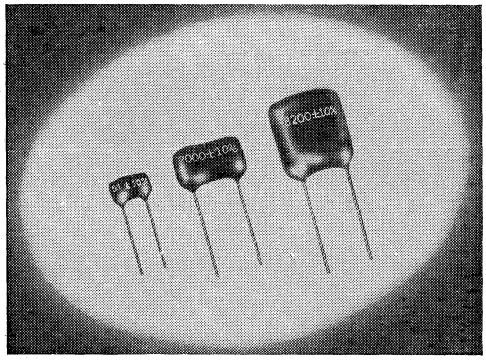
L	7/16	5/8	23/32	25/32
D	11/32	15/32	15/32	27/32
T	5/32 min. to 7/32 max.			5/16
S	15/64	11/32	7/16	7/16

Leads are No. 22 tin-coated copper, 1¼" minimum. Dimensions shown are maximum except "S", the tolerance of which is ±1/64".

CAPACITY RANGES: (mmf.)	DM15	DM19	DM20	DM30
MAX. CAP. 500VDCW	400	3000	3900	10000
MAX. CAP. 300VDCW	820	3900	5100	15000
MAX. CAP. 100VDCW	820	5100	7500	20000

Minimum tolerance available is ±½% or ±0.5 mmf., whichever is greater.



OPERATING TEMPERATURE RANGE:
—55°C. to + 125°C.

•

MINIMUM INSULATION RESISTANCE:
25000 megohms at 25°C.
1000 megohms at 125°C.

•

STABILITY (CAPACITY DRIFT):
=0.05% +0.1 mmf. MAX.

All other specifications meet or exceed applicable MIL-C-5A and RETMA standards for similar sized molded mica capacitors.

COMPONENT RELIABILITY:

Life tests presently being performed at 125°C. and 150% rated voltage have passed 10,000 hours without a single failure. This is roughly equivalent to more than 20 years of operation under normal operating conditions.

TELEVISION · TRANSMITTING · INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS

Molded in CM-20, CM-35 and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length fo life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

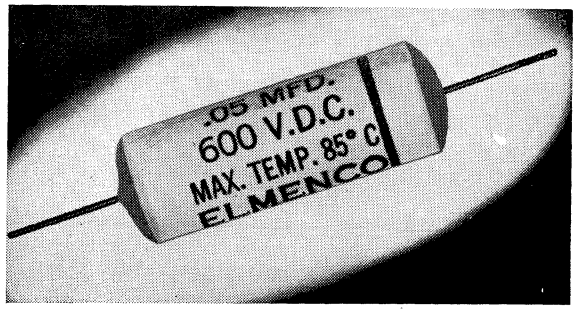
PAPER DIELECTRIC CAPACITORS CP TYPE



El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2¼" long.

MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

TRIMMERS

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

EL-MENCO TRIMMING CONDENSERS are treated for resistance to humidity and for permanence of capacity setting.

Trimmers shown here are standard sizes and capacities.

El-Menco CP type paper tubular capacitors are sealed in impervious steatite ceramic tubes through use of synthetic resin end fills which are waterproof and will not melt at any conceivable operating temperature. The non-inductively wound paper and foil inserts are mineral oil impregnated. This combination of fine quality material and construction insures long life at high ambient temperatures, indefinite shelf-life and trouble-free operation under the most adverse conditions.

F-C-I POLYSTYRENE CAPACITORS

F-C-I Polystyrene capacitors are characterized by a unique combination of low power factor, high insulation resistance and low dielectric absorption ("soakage") which cannot be duplicated by any other type of capacitor except Teflon units. Furthermore, the capacitance stability is excellent, and the temperature coefficient of capacitance is very small. Values of electrical characteristics are given in Table I. F-C-I Polystyrene capacitors are furnished as standard units in hermetically sealed glass tubes with metal end caps; in bathtub cases with low loss glass terminals; and in style CP70 metal cans with low loss glass terminals. Special units, including multi-section blocks are also available to order, and made to your specifications.

F-C-I TEFLON CAPACITORS

F-C-I Teflon capacitors are essentially identical to polystyrene capacitors in their electrical characteristics, with one important difference—Teflon capacitors may be operated at temperatures up to 200° C, whereas polystyrene capacitors have a maximum operating temperature of 85° C. Furthermore, the insulation resistance of Teflon capacitors is many times that of polystyrene at elevated temperatures.

FILM CAPACITORS, INC.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D capacitors employ a newly developed plastic film dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. The table below shows the electrical properties of these capacitors. In view of these excellent characteristics, it is evident that F-C-I Type D capacitors are suitable for practically every type of high voltage D.C. application. With these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D capacitors are furnished in glass tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. Ask for our quotation.

GENERAL DATA

Pyramid Electric Company introduces the CRA-2, Capacitor-Resistor Analyzer, a versatile, up to date, moderately priced test instrument. The CRA-2 is the perfect multi-purpose analyzer for the technician, serviceman and engineer, in industrial and military electronics, black and white, and color television, and all related fields.

The guesswork has been removed from circuit trouble shooting. When making leakage-current measurements, the values are read directly from the meter while the rated operating voltage is applied to the capacitor. A vacuum-tube ohmmeter circuit displays accurate insulation-resistance values on the meter for many types of capacitors. The extended range calibrated power factor control permits power factor measurements of electrolytic capacitors rated as low as 6 volts DC working and as high as 600 volts DC working. The special "QUICK CHECK" circuits perform rapid "IN CIRCUIT" test for short, open, intermittent high RF impedance and high power factor without removing or disconnecting the component from its operating circuit.

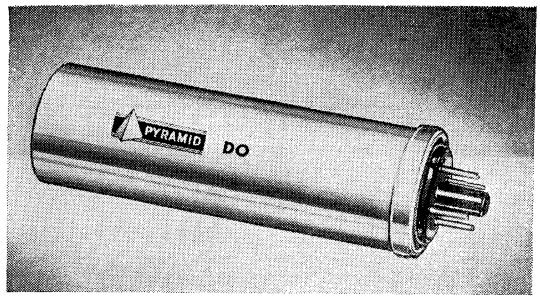
PLUG-IN ELECTROLYTIC CAPACITORS



Designed for 85° operation. Hermetically sealed in round aluminum containers. Provided with four pins (Nos. 1, 3, 5, 7) on standard octal base. Plugs into standard 8-pin octal socket. Ideally suited for any application where quick capacitor changes are required. Grounding lug supplied for grounding case to chassis. (In accordance with military standards, a low variable resistance exists between pin 1 (negative) and the case; to ground pin 1, a direct ground connection must be made from the corresponding lug on the socket.) For mounting rings, see page.

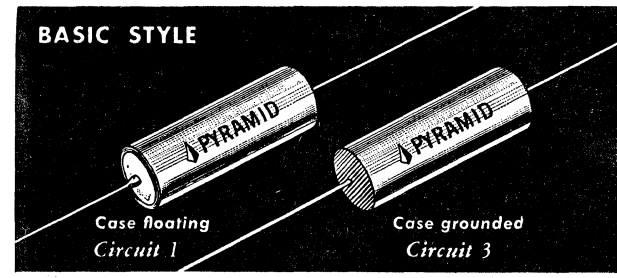
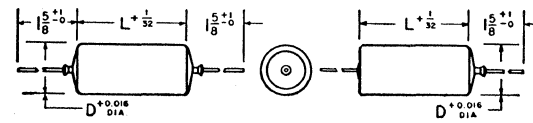
GLASSEAL™

HERMETICALLY SEALED *subminiature* TUBULAR PAPER CAPACITORS

for 125° C operation at full rating





Pyramid "GLASSEAL" capacitors are subminiature metal cased tubular units which have been designed to meet severe and rigid operating requirements, especially where an important design consideration is limited space.

"GLASSEALS" have proven themselves to be unsurpassed in reliability over the entire operating temperature range from —55° C to + 125° C. Rigid inspection throughout the manufacturing processes assure their continued excellence.

Pyramid "GLASSEALS" are available in a variety of impregnants, and internal constructions hermetically sealed with glass-to-metal end seals in nonmagnetic metal tubular cases. They are available in many mounting styles. See Engineering Catalog PG-3 for full details. Pyramid "GLASSEALS" are manufactured in accordance with MIL-C-25/1B and may be secured with MIL designations CP04, 05, 08, 09, 10 and 11 whenever required.

ASTRON® Capacitors

ASTRON CORPORATION
EAST NEWARK, N. J.

METEOR* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- **Amazingly small sizes, compact and light-weight units.**
- **Highly dependable operation at temperatures up to 125°C. *without voltage derating.***
- **Exceptional capacitance stability, less than 5% change, over entire temperature range of −65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250*.**
- **High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.**
- **Built to exceed stringent requirements of Specification MIL-C-25A for styles CP04-05-08-09-10-11 (ASTRON Types AQ, TQF, and variations); and styles CP53-54-55, Characteristic K (ASTRON Type ADZ, bathtub).**
- **Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.**
- **Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.**

METALITE®

Metallized Paper Capacitors for 65°C. and 85°C. Operation

METALITE CAPACITORS

Feature:

- **Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.**
- **As much as 75% reduction in size over conventional paper-foil capacitors.**
- **Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.**
- **Temperature Range (Metal cased units) −65°C. to +85°C.; (cardboard cased Type ML) −55°C. to +65°C.**
- **Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.**
- **Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.**
- **Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.**

METALITE® TYPE MQC

85°C. Operation

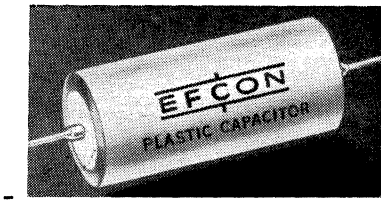
Miniature Capacitors and "MYLAR"*



EFCON Close Tolerance Capacitors . . . both Polystyrene and "Mylar" . . . provide excellent stability over an extended temperature range. . . . Polystyrene has extremely high insulation resistance (10^{12} ohms at 25°C). They have a low negative temperature coefficient. In addition to a very low dielectric absorption . . . EFCON Capacitors feature the lowest dissipation factor of any film capacitors. They are tested at a DC voltage of at least 200% of rated voltage at 25°C.

Both EFCON Polystyrene and "Mylar" Capacitors are mass produced in two types: Polystyrene Type PC and "Mylar" Type MC feature a rigid, wax impregnated, tubular construction. Polystyrene Type PH and "Mylar" Type MHH and Type MH are hermetically sealed in a metal case with glass-to-metal, solder-sealed terminals. Both types feature non-inductive extended foil construction with leads soldered directly to the foil . . . assuring minimum contact resistance.

Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

"ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of —30° to +85° C.

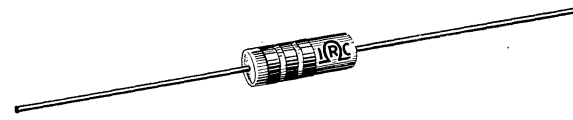
INSULATED RESISTORS

TYPE BT FIXED COMPOSITION CARBON RESISTORS



More IRC Filament Type BT Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC BT's are by far the leading choice of Electronic Engineers. For replacement, Service Technicians favor IRC BT's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

COLOR CODING AND STAMPING

Resistance values are clearly indicated by standard RETMA Color Code. All resistors in Distributor Packages, except BTR, are individually stamped with value and wattage.

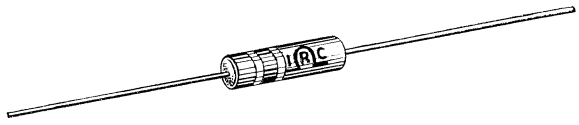
TYPE BW INSULATED WIRE WOUND RESISTORS



Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

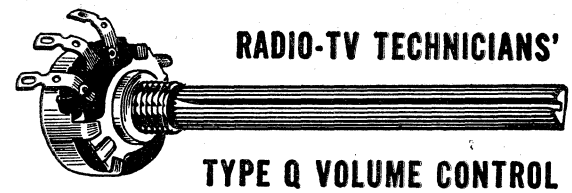
IRC TYPE Q VOLUME CONTROLS



RADIO-TV TECHNICIANS' TYPE Q VOLUME CONTROL

IRC's Type Q Control is the basic control for servicing all sets. It is carefully engineered to meetmostreplacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependble performance provide more profitable servicing.

¼" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

Q CONTROL ACCESSORIES

TAB MOUNT CONTROLS

Many recent TV sets use Tab Mount Controls. These are single controls without switch. They differ from standard controls in that bushing is omitted and mounting to chassis is made with two heavy twist-type mounting tabs.

IRC TAB-MOUNT KITS

Since assembly of Tab-Mount Controls is so simple, IRC supplies three 3-Part Tab-Mount Kits which will assemble with any standard plain or tapped IRC Base-Element to provide satisfactory Tab-Mount Controls. Each TM Kit includes a Tab-type Ground Plate, a control cover and a finger-knurled and screw-driver slotted shaft of appropriate length for universal replacement. Packaged with instruction sheet but without necessary Base-Element.

TM-1—IRC Tab-Mount Kit—Shaft ¼" long. **List Price $0.65**

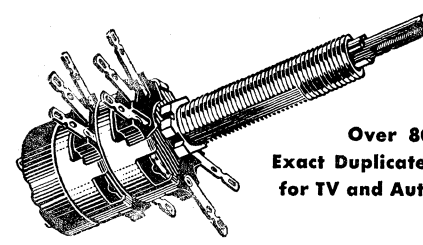
TELEVISION and AUTO SET CONTROLS



Over 800 Exact Duplicate Controls for TV and Auto Radios

For those who prefer factory-assembled special controls, IRC provides an exceptionally broad line of over 800 Exact Duplicate Controls. Each control is specified closely to manufacturers' original control specifications —required. Carbon and wirewound elements are used for panel and rear sections as required.

The IRC Exact Duplicate Line now includes over 100 concentric dual controls for auto radios. Modern in design, these new controls bring many unique and desirable features to provide convenience, economy and long life. The new IRC Printed-Silver Tone Switch eliminates contact fatigue—assures positive, no bump contact. Simple detent assures positive positioning independent of switch action. Control position feature of $\frac{7}{16}$" and ½" bushings permits exact duplication of original. Short control depth fits most crowded locations. Power switches amply rated for both TV and Auto Radios. Consult S-012 Part Number Replacement Manual for needed controls.

IRC CONCENTRIKIT ASSEMBLES EXACT DUPLICATE CONTROLS features quick assembly—no modification of parts.

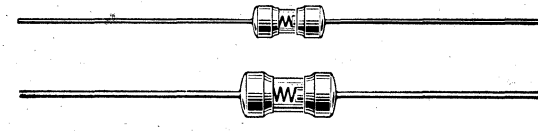
MICROSTAK SELENIUM DIODES



Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½". Body length — .450". Diameter — .145". (Type 9GA1) Length of leads — 1½". Body length — .500". Diameter — .210".

TYPE 6GA1

Stock No. 6GA1-2B. Minimum forward current (at 2 V.D.C.) is 0.5 M.A. and corresponding resistance, 4000 ohms. Maximum inverse current (at 20 V.D.C.) is 20 microamperes and corresponding resistance, 1 megohm. Peak inverse volts —36. Continuous inverse volts —22. Maximum A.C. input (RMS volts with resistive load only) —26. Temperature range is —55°C to +90°C. Shunt capacitance — approximately 25 mmf (measured with two plates back-to-back on 1000 cycle bridge).

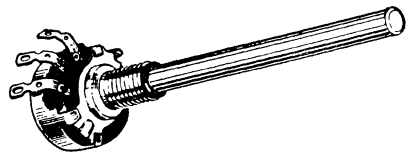
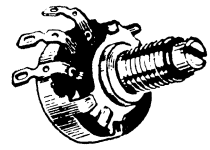
SINGLE CONTROLS



TYPE PQ



TYPE RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $\frac{15}{16}$" Q Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜" bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round ¼" shaft, approximately 3" from mounting face, with ⅜" long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

LIST $1.40

TYPE RQ. Very short screw-driver slot shaft, ¼" diameter and approximately ½" long from mounting face with ⅜" long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

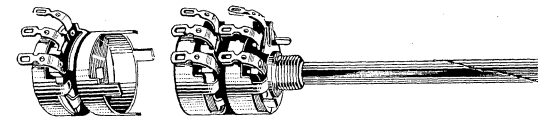
IRC DISTRIBUTOR CONTROLS FOR INDUSTRY

DUALS AND TRIPLES

IRC Type PQ and RQ Industrial Controls are supplied as single controls. Dual Control and Triple Control combinations are available by adding IRC MULTISECTIONS.



MULTISECTIONS

IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ or RQ Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 22 values, as shown in following table. Each MULTISECTION adds $\frac{13}{32}$" to basic control.

IRC Power Wire Wounds are designed for continuous operation at full rated power. Derating is unnecessary even for the highest stock values. IRC Power Wire Wounds are full size, thus capable of efficiently handling greater wattage. Cooler performance assures longer resistor life, and safeguards critical components mounted adjacently. Clear, permanent markings show type, size, wattage, and resistance value; markings improve in legibility with temperature rise. Terminals are tin plated for easy soldering.

PRECISION
WIRE WOUND RESISTORS

Improved ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Special winding technique, developed by IRC, eliminates shorted turns or strains in the winding.

Improved insulation provides greater humidity protection and contributes to longer trouble-free service. Improved lug and lead terminals assure perfect electrical connections without strain on the windings, and are easily soldered.

IRC offers a complete line of redesigned Precision Wire Wound Resistors. These improved units are fully interchangeable with earlier types, while providing higher standards of performance plus new sizes and terminals.

All IRC Precisions, except Type WW10J, are furnished with rugged lug terminals for soldered connections. Type WW10J has wire lead terminals 2″ long.

All Types except WW8J and WW10J are wound with adjacent sections in opposite directions. This provides windings of low residual inductance, and windings that have little coupling effect from other parts of the circuit. Type WW8J, with single section, is wound non-inductively. Type WW10J has a single section winding, but inductance is minimized by the comparatively small size of this unit.

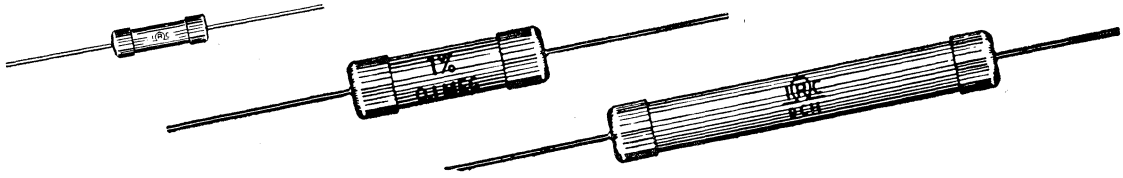
CLOSE TOLERANCE PRECISTORS

TYPE DC
DEPOSITED CARBON RESISTORS
1% ACCURACY
PRECISION PACKAGED
½, 1 and 2 WATTS



IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Precistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRECISTORS make them superior for many popular applications.

IRC Type DC Deposited Carbon Precistors are available in three sizes: ½ watt (body size $\frac{9}{16}$" x $\frac{5}{32}$"), 1 watt (body size $\frac{13}{16}$" x $\frac{9}{32}$"), and 2 watts (body size $2\frac{1}{16}$" x $\frac{9}{32}$"). Accuracy ±1% (25°C).

For complete protection against scratches, jars and surface injury IRC PRECISTORS are factory packed in capped plastic tubes. This special precision packaging also safeguards these close tolerance resistors against excessive handling.

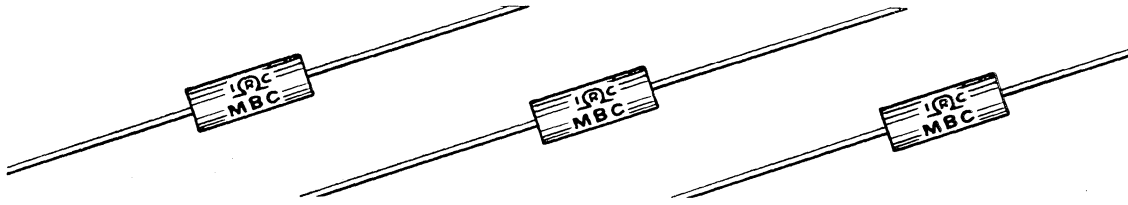
MOLDED BORON - CARBON PRECISTORS 1% ACCURACY ½ WATT

IRC CLOSE TOLERANCE PRECISTORS



TYPE MBC

IRC's Molded Boron-Carbon Precistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded plastic housing provides complete mechanical protection, and minimizes the effect of moisture. Because of its greater heat dissipating capacity, load life characteristics for the Type MBC are improved over those of either boron or deposited carbon unmolded units.

APPLICATIONS

Type MBC Molded Boron-Carbons are particularly suited for applications where unmolded boron or deposited carbon units cannot be used due to the risk of mechanical damage to their coating, insulation breakdown, or high moisture change.

SPECIFICATIONS

WATTAGE RATING: ½ watt at 40°C. ambient (per MIL-R-10509A), derated to 0 at 120°C.

RESISTANCE VALUES: 10 ohms to 510K ohms.

TOLERANCE: Standard tolerance is 1%.

IDENTIFICATION: Housing is distinctive green plastic. Type designation, resistance value and tolerance are stamped on each unit.

IRC Insulated Chokes are available in four sizes designated as types CL½, CLA, CL1, and CL2. All four are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

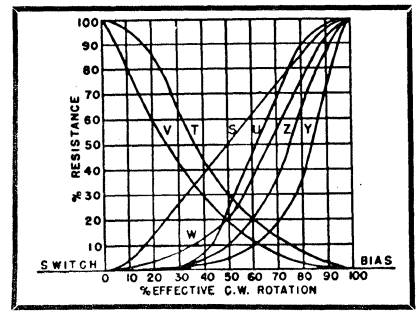
COMPOSITION-ELEMENT CONTROLS

These "Pick-A-Shaft"* and "Ad-A-Switch"* controls will take any of the shafts listed on page R-24, including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed (this does not include insulated shaft) with each control. "A47F" and "A47" controls use "SWE" switches, shown on page R-24. Tolerances of these controls are in accord with RETMA standards — overall resistance tolerance of plus/minus 20% for all values up to and including 100K ohms; plus/minus 30% above 100K. Controls are available with factory-assembled shafts at no extra charge, by omitting prefix "A" from catalog number and designating type of shaft desired, when ordering. Example: 47-100K-S with FKS- ¼ shaft.



Graph Explanation:

Taper S—Straight or uniform resistance change with rotation.

Taper T—Right-hand 30% resistance at 50% of C.C.W. rotation.

Taper U—Left-hand 1% resistance at 33⅓% of C.W. rotation.

Taper V—Right-hand 20% resistance at 50% of C.C.W. rotation.

Taper W—Left-hand 20% resistance at 50% of C.W. rotation.

Taper Z—Left-hand (Log. audio) 10% resistance at 50% of C.W. rotation.

Taper Y—Left-hand 5% resistance at 50% of C.W. rotation.

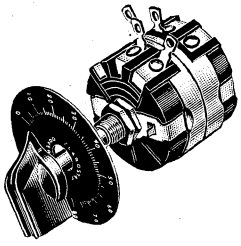
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

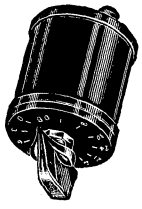
CONSTANT IMPEDANCE OUTPUT ATTENUATORS



Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

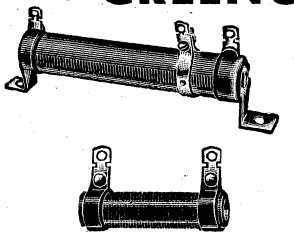
"GREENOHM"* WIRE-WOUND RESISTORS



FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are ± 10%.

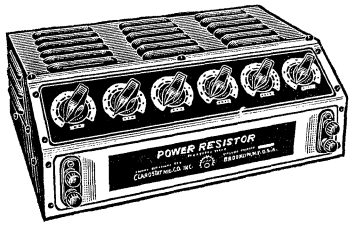
POWER RESISTOR DECADE BOX



The Resistance Decade Box Model No. 240C allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8½ in. deep; 5¾ in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

"FIXTOHM*"
(Deposited-Carbon) PRECISION RESISTORS

Manufactured by the Clarostat subsidiary, Campbell Industries, Inc., Chattanooga, Tenn., to MIL-R-10509A Military Specifications.

A patented, alkaline earth, ceramic insulator developed to properly receive and hold pyrolytically-deposited carbon, is the basis of all "FIXTOHM" Resistors.

A pure, crystalline carbon film is deposited by thermal decomposition of a hydrocarbon, no binder or filler being used. This form of carbon has almost diamond hardness, is extremely stable, and has a very low temperature coefficient of resistance.

Bands of silver are baked on each end of the resistor. Over these bands, tinplated brass terminal assemblies are press-fitted. This assures the excellent terminal conductivity and minimum noise of "FIXTOHM" Resistors.

For lower resistance values no "spiralling" is required. For the medium and higher resistance values, the basic resistances are "spiralled" by cutting thru the crystalline carbon film down into the insulator to create a helical current path around the resistor core. The entire active length of the resistor is always "spiralled" and used.

The resistor is carefully adjusted to final resistance value by slight and uniform abrasion over the entire surface of the crystalline carbon film to insure the final accuracy of "FIXTOHM" Resistors.

To protect this very accurate, crystalline-carbon film, multiple layers of insulating, moisture resisting varnishes are separately baked on the resistor.

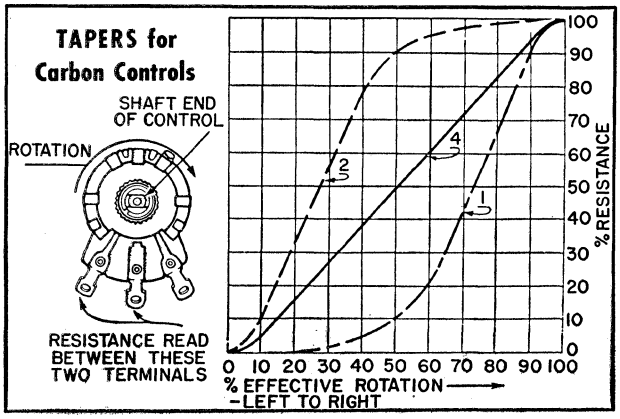
Explanation of Mallory Tapers

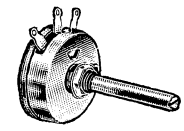
Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.





TV Focus Controls

These 1 5/8″ diameter units are designed especially for focus control replacement in TV sets. They are 4 watt, wire-wound, and have a special taper. One control, plus accessories and complete instructions per display carton.

Type DC ± 1% Deposited Carbon Precision Resistors

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed ¼% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1% .

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1½" tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C. and each has a negative temperature coefficient range of approximately .03% for low resistance values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.

Type HS ± 10% Deposited Carbon Resistors

For the first time the well-known advantages of high-stability low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed ¼% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1% .

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

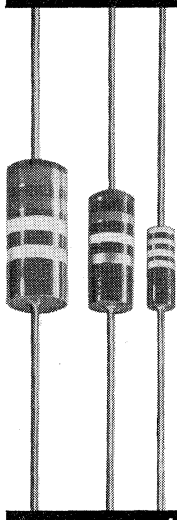
RESISTORS CAPACITORS

HIGH QUALITY FIXED COMPOSITION

PAPER DIELECTRIC CUSTOM MANUFACTURED

5% and 10% TOLERANCE, ½-1-2 WATT RATINGS



2W 1W 1/2W (ACTUAL SIZE)

G-H, fixed composition resistors of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered—prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

G-H resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of ½, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

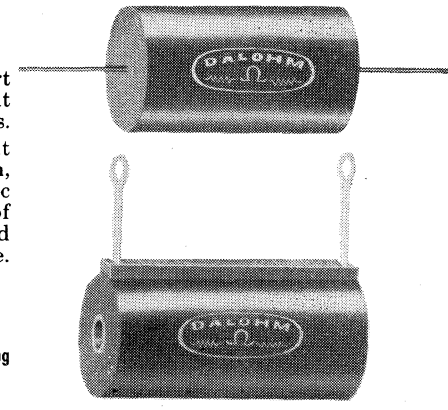
TYPES WWA and WWL
LIGHT WEIGHT WIRE WOUND RESISTORS

ENCAPSULATED for HERMETIC SEALING

Dale engineers and chemists have compounded a chemically inert material making possible these light weight precision resistors that surpass the requirements of applicable JAN and MIL specifications. They are completely impervious to the penetrating effects of salt ions, humidity, moisture and corrosive gases and vapors. In addition, the material in which they are encased has a very high di-electric strength, and, due to its coefficient of expansion matching that of the wire itself, it eliminates the possibility of distorted windings and shorted turns that are quite common on other resistors of this type.



- Non-inductive, pi-wound
- Resistance range—0.1 ohm to 5 megohms depending on type
- Tolerances—0.1% to 1%
- Temperature coefficient—0.00002/per degree C at 25° C
- Humidity test—no change in resistance after cycling per MIL-R-93A Specs

LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

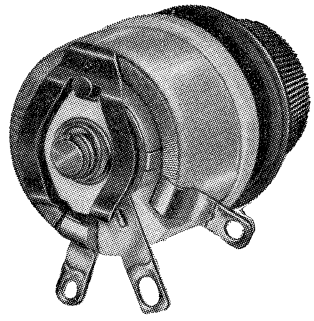
VITREOUS ENAMELED RHEOSTATS

Insulated shafts and mounting bushings

Type A-25 — Will withstand rugged treatment under the most adverse conditions. It has unusually smooth mechanical operation. The terminals, made of strong corrosion resistant alloy, are permanently welded to the winding form. The wound ring is made an integral part of the refractory base by vitreous enamel. The phosphor bronze actuating arm, with its graphite brush, gives smoothest action and excellent electrical control. Shafts are insulated. Three terminals permit either potentiometer or rheostat use; and our new high temperature gray enamel gives an added safety factor.



Types H-50, H-100, H-150 — These are our newest rheostats and they will give longer service and greater protection. They are designed for use under extremes of humidity and abnormal atmospheric conditions. The unique "buss bar" type brush *automatically adjusts tension* for complete, continuous contact. It eliminates backlash and prevents binding. It assures perfect contact with the entire winding surface. Our new high-temperature gray enamel bonding gives you an increased safety factor and better overall service. These improved rheostats are designed to comply with current standards of: (a) Military Specifications MIL R-22. (b) RETMA. (c) N.E.M.A. (d) "listed by Underwriters Laboratories, Inc."

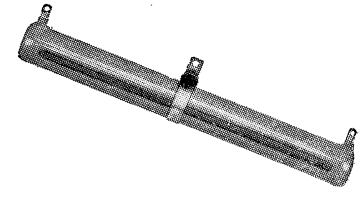
ADJUSTABLE VITREOUS ENAMELED RESISTORS
WITH MOUNTING BRACKETS



Embodying features originated by Hardwick, Hindle, Inc., resulting in a Resistor possessing the many advantages of Vitreous Enamel Construction, plus an adjustable feature.

The winding is closely and evenly spaced, assuring ample insulation between turns. Where the winding appears exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with the adjustable band.

All sizes of Adjustable Resistors listed herein are furnished complete with mounting brackets and with one adjustable contact band.

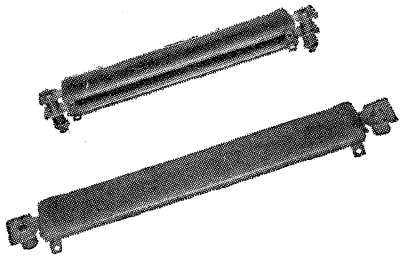
BLUE RIBBON RESISTORS



Blue Ribbon resistors differ from tubular resistors in that they are wound on an elliptical core. An aluminum bar through the center insures more even distribution of heat, avoiding hot spots.

Our gray enamel eliminates crazing which results in failure of the resistive element due to moisture penetration from humidity, salt and other severe atmospheric conditions.

Mounting studs—corrosion and rust resistant—peened to the ends of the thru-bar conduct heat to the mounting surface. You can stack two or more units. Our method of fastening the tube to the thru-bar prevents loosening.

In comparison with tubular units of equivalent wattage rating these resistors offer outstanding advantages: • Higher wattage rating per unit space requirement. • Reduction in space requirement. • Simple sturdy mounting, single or stacked. • Light weight. • Lower inductance.

Designed for and manufactured in accordance with JAN-R-26A specifications.

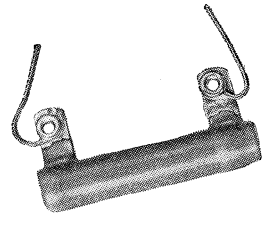
*This rating based on a maximum temperature rise of 300 degrees C. with the Resistor mounted horizontally on a 10" x 10" x .040" steel plate supported horizontally ½" above a wooden surface.

When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately 15%.

10 and 20 WATT FIXED VITREOUS ENAMELED RESISTORS

Designed for radio service and replacement use—conservatively rated—wound upon Steatite Tube—combination lug and pigtail terminal connections. Vitreous



enamel insulation, insures proof against moisture. 10 watt and 20 watt sizes, in the range of resistance values shown.

a. High temperature enamel—bonds the wire to core and the core to base to afford greater safety factor where overloaded conditions are demanded.

b. Bus-bar construction gives minimum resistance and ample safety under maximum current requirements. Made of alloy materials to fit wire size and current requirements of various resistance values and also to give minimum wear on wire.

c. Constant pressure contact arm—This patented feature is made of high carbon spring steel to insure uniform pressure of contact brush on both collector ring and winding surface and to eliminate troublesome contact resistance.

d. Tripod Mounting Frame—Alloy casting designed to give greater safety factor under shock and vibration.

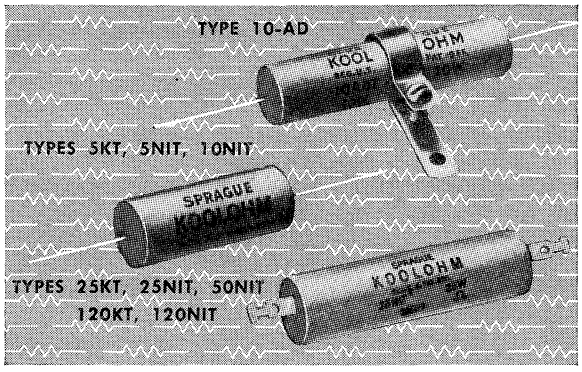
SPRAGUE RESISTORS

KOOLOHM® WIRE-WOUND RESISTORS



- Wound with wire which is insulated **before winding** with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

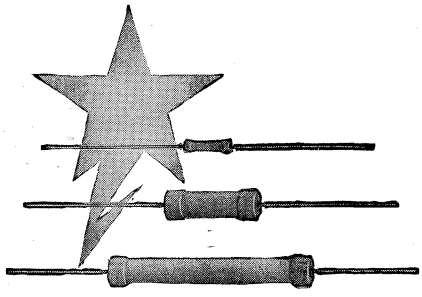
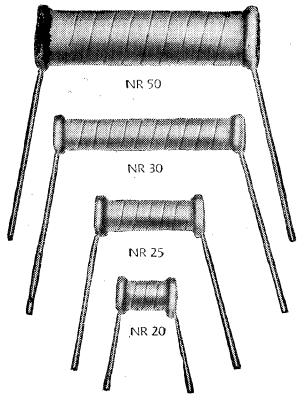
METAL FILM RESISTORS

WITH AXIAL OR RADIAL LEADS

NOBLETTE TYPE NA



NOBELOY TYPE NR



DESIGN AND CONSTRUCTION

A metallic resistance element is deposited on a low loss ceramic carrier using a pyrochemic process developed and patented by Continental. A layer of vitreous enamel protects metal film against unusual atmospheric conditions. They are calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. The NOBLETTE with its axial leads and the NOBELOY with radial leads permits the use of metal film resistors in a wider range of application.

Notable quantities of these metal film resistors are low inductance—initial accuracy and excellent resistance stability under adverse operating conditions.

Both types are stocked in standard tolerances of ±1 and 5%. Also available in ½ and 2%—prices furnished on request. When ordering, specify quantity, resistance, tolerance and type or wattage.

WIRE WOUND RESISTORS

LOW POWER

Resistance Wire Molded in Bakelite

Axial Lead — Insulated **Color Coded — RETMA Standard**

For low power application. Composed with a minimum of .0015 inch wire that is wound automatically for true parallel winding to prevent shorting at turns. Terminals are securely bonded to permanent connections to the winding. They are moisture resistant and recommended for circuits requiring very low resistance, which is not ordinarily available in the carbon style.

CARBON FILM RESISTORS

Standard 1% Tolerance

(2% and 5% Tolerances Available)

A low cost precision resistor, highly recommended for test equipment, meters, hi-frequency circuits, etc. Design and construction features a layer of pure carbon particles deposited on a ceramic rod. Silver plated end caps are expansion fitted over silver contact bands for good electrical and positive contact. The terminals will withstand a 5 pound pull test. Tinned copper leads are securely riveted to caps.

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

The S-19, S-21 and S-23 Suppressors are equipped with a removable terminal nut for spade type mountings.

BE RIGHT WITH OHMITE ★ RHEOSTATS RESISTORS SWITCHES CHOKES

VITREOUS ENAMELED RHEOSTATS

CLOSE CONTROL RHEOSTATS

Underwriters' Laboratories Reexamination Service Listed

For many years the Ohmite line of ten wirewound, vitreous enameled rheostats, ranging from 25 to 1000 watts in size, has been the most extensive available to industry. Six of the most popular sizes have been carried in stock by Ohmite Distributors and at our factory. Now, the other four sizes, the Model G, 75 watts; Model P, 225 watts; Model T, 750 watts; and the Model U, 1000 watts are available from stock, thus making the entire line of ten sizes quickly obtainable for design and production needs and for emergencies.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. The construction is patented under U. S. Patent No. 1,942,495 and Re-issue 19607; other patents pending. Ohmite Rheostat Models H, J, K, L, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air;* when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in *three stock sizes:* 3-Watt ($\frac{9}{16}$" x ¼"), 5-Watt (1" x $\frac{11}{32}$"), and 10-watt (1¾" x $\frac{13}{32}$") . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have 1½" tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is ±5%, 50 ohms and higher; tolerance below 50 ohms is ±10%.

WITH WELDED TERMINALS

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. These all-welded construction units have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world —prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads.

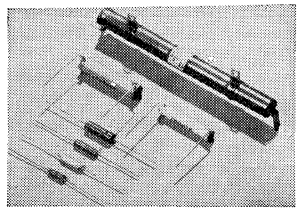
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

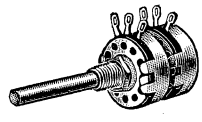
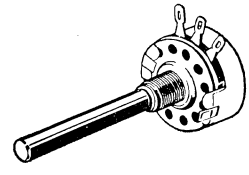
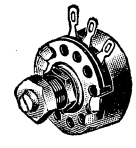
2 WATT MOLDED COMPOSITION POTENTIOMETER – TYPE AB







The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16″ diameter and extends 9/16″ behind the panel. The dual unit extends 1-3/16″ behind the panel. The 2″ long round shaft (including the ⅜″ long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screwdriver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

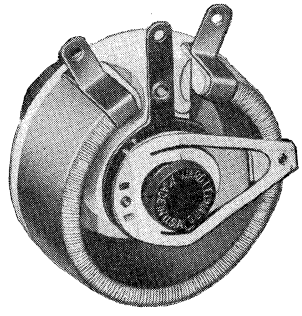
TYPE 50R



25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on ¼" panel.
