AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

AUTOMATIC REGULATION

WHAT IT IS! ***AMPERITE*** **is an automatic "rheostat" designed to keep the current in a circuit at a definite value, e.g., 0.5 amps.**

Should we supply voltage increase, the *AMPERITE* will automatically increase in resistance to take up the increase in supply voltage.

Since *AMPERITE* is a constant current device, it can only be used on a fixed load.

We strongly recommend that you send us your specfications on special problems, and let us recommend the BALLAST TUBE you need.

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 30 V. Maximum dissipation per **AMPERITE** 50w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended	**2000 Hours**
If operated continuously at maximum voltage	**1000 Hours**
If operated continuously at 80% maximum voltage	**5000 Hours**
If filament is operated below glow point	**5000 Hours up**

In operation, the *Amperite* filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning *Amperite* on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an *Amperite Ballast Tube* depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

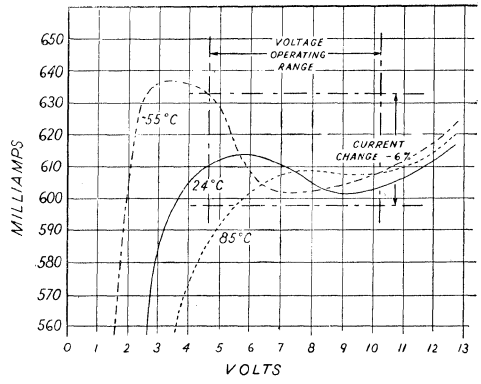
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

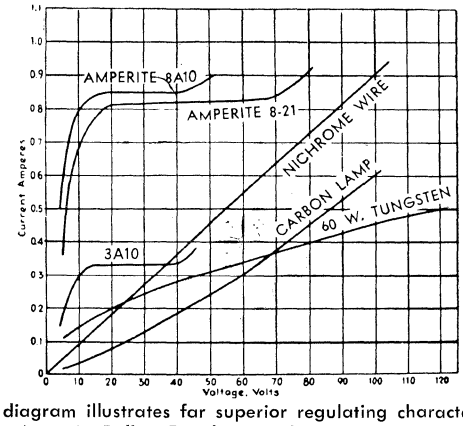
AMBIENT EFFECTS

Ambient temperature variation of —50° to +70°C will change the current value of an *Amperite* approximately 2% on regulating portion of curve shown directly below. Being hermetically sealed the *Amperite* is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

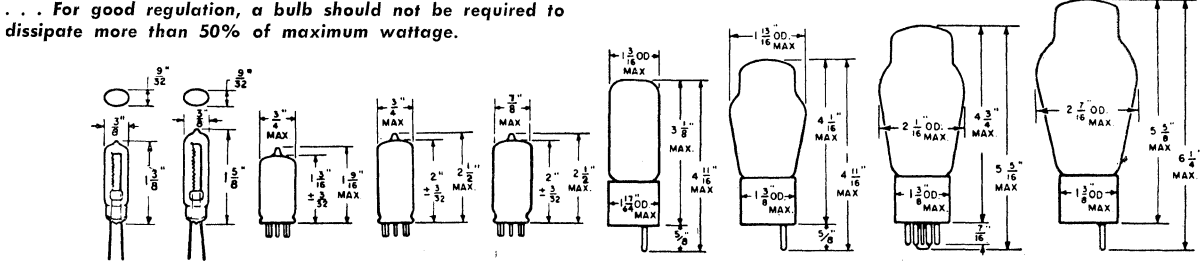


Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of —55°, 24°, and 85°C. The percentage change with ambient is approximately the same with all type *Amperite* ballasts.



This diagram illustrates far superior regulating characteristics of the *Amperite* Ballast-Regulating Tube.

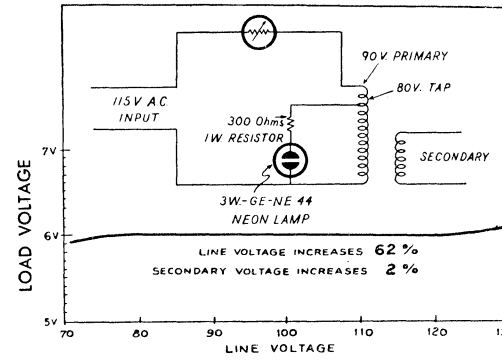
STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.



SIZE	SUB. MIN. S	SUB. MIN. L	T5½S	T5½L	T6½L	T9	ST-14	ST-16	ST-19
MAX. WATTS	1 W	2 W	3	5	5	12	20	30	60
WT. PER TUBE	1¾ GMS.	2 GMS.	7 GMS.	8 GMS.	8 GMS.	1 oz.	2¼ oz.	2½ oz.	2¾ oz.

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of *Amperites* of the same voltage range can be placed in parallel in order to obtain the proper current. The current can be kept to ± 1%. Advise voltage variation and currents desired.



On 115V supplies ± 1% regulation can be obtained by shunting the load or transformer primary with a G.E. 3W—NE-44 Neon Lamp. 1 G.E. 3W—NE-44 Neon Lamp should be used for each 50 watts of load. This is the cheapest and most compact method of obtaining ± 1% regulation. The *Amperite* is not affected by frequency changes.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Pow. Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on **AMPERITE**	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain ± 2% regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE**. In general, the higher the percent of the supply voltage taken by the **AMPERITE**, the better the regulation.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

CONSTRUCTION

The TRU-OHM power rheostat will provide smooth variation of resistance under the most severe operating conditions. The all ceramic-metal construction insures dependable service even at extreme operating temperatures. An extra deep core, on which the resistance wire is toroidally wound, means a more conservative power rating.

Types R-50, 75, 100 and 150 have an exclusive torsion spring assembly which provides uniform pressure of the contact brush against the winding at all times. Current flows from the brush through a flexible shunt wire to a large size slip ring. Positive, low-wear contact is maintained against the center terminal by an adequate compression spring. Back lash in the rotating assembly is reduced to a minimum by means of the design. A positive stop is provided at the extremes of rotation entirely independent at the contact arm assembly.

SPECIAL FEATURES

TRU-OHM rheostats are available with many extras such as off positions, screw driver control, shaft assemblies for special mounting conditions, etc. Prompt engineering service is available for all special requirements. Knobs furnished upon request.

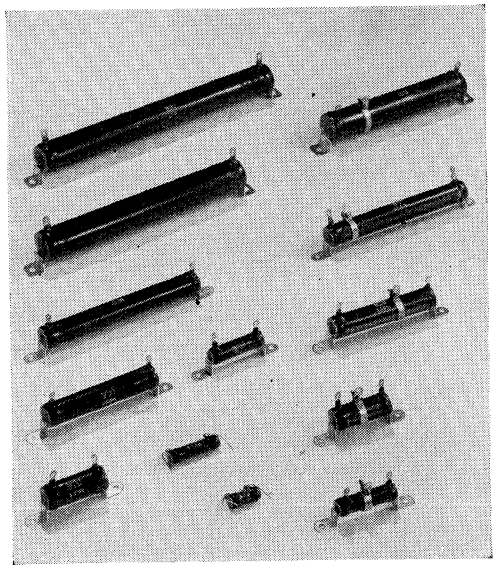
FIXED and ADJUSTABLE RESISTORS



WIRT POWER resistors are produced to exacting quality standards for maximum reliability and long trouble-free operation. **WIRT POWER** resistors are rated for hot spot temperature of 515° F in an ambient of 40°C (104° F). They are available from stock in all standard RETMA resistance values.

FIXED RESISTORS

WINDINGS — A low temperature coefficient resistance wire is precisely space wound on a low loss ceramic core. Maximum wire size is used consistent with wattage ratings and resistance.

TERMINALS — Bands are securely clamped and permanently secured to the winding and core to insure continuity of resistance. Wire terminals are affixed to all sizes of 20 watts and below unless expressly omitted.

COATING — Each resistor winding is protected with a coat of vitreous enamel fused on at high temperature to insure a mosture-proof, acid resistant barrier and rapid dissipation of heat.

ADJUSTABLE RESISTORS

Adjustable **WIRT POWER** resistors are made under the same specifications as the fixed. A portion of the winding is exposed longitudinally to which a slider contact band is attached. A screw-driver adjustable band is supplied with each resistor to make contact at any point of the exposed portion. Ratings are based on the entire resistance from terminal to terminal and rated proportionately to the point of the adjusting contact band. Loosen the band free of the winding before moving to avoid abrasion of the resistance wire.

WIRE WOUND FLAT RESISTORS

Construction is of evenly spaced nickel alloy resistance wire wound on a special molded rectangular ceramic base. Terminal leads are permanently affixed by a special Patent Applied For process to insure positive and everlasting contact. These resistors are coated with a tough moisture resistant high temperature material. Center taps and other positioned taps can be furnished on special order to provide a wide assortment of styles in various ratings. Standard tolerance is ± 10%; however, other tolerances are available. Resistors are permanently marked with resistance, ratings and manufacturers designation.

Maximum surface temperature is 250°C in an ambient of 40°C at full rated load.

BIRFLON TEFLON TUBING
BUS BAR WIRE - INSULATED BUSHINGS

Spaghetti, Sleeving, made from "TEFLON" is used in electronic equipment primarily for connection of components. Where temperature range and space is a factor, spaghetti made from "TEFLON" is ideal because its continuous service temperature is 250° C. This is more than 100° C. above other materials used for spaghetti. "TEFLON" is a Class C dielectric. Even where 100° C. temperature applications are indicated "TEFLON" will be of help in simplifying the soldering technique since "TEFLON" is not harmed by the hot barrel of the soldering iron—therefore, the assembly of aircraft and communication electronic equipment is greatly speeded up.

ADDITIONAL ADVANTAGES OF BIRFLON T-500 "TEFLON"*

- Good dielectric strength (500 to 1000 volts/mil)
- Lowest dielectric constant (2.0) and dissaption factor (0.0002) of any solid dielectric
- NO change of electrical properties with temperature (25° C. to 250° C.) or frequency (60cps to 100mc.)
- Service range from -320° F. to 500° F. and retains toughness and flexibility throughout temperature range from -110° F. to 500° F.
- Non-flammable, Non-explosive
- Unaffected by corrosive atmospheres and fungus
- Zero water absorption
- Full range of colors for identification

ADDITIONAL USES FOR BIRFLON T-500 SPAGHETTI

- SHEATHING FOR SEVERAL WIRES
- MEDICAL APPLICATIONS
- INSULATION FOR BARE WIRES
- INSTRUMENT TUBING
- REPLACEMENT FOR HOOK-UP WIRE INSULATED WITH "TEFLON"*

BIRNBACH is your best source of tubing, made from "TEFLON." Your inquiry and order will receive immediate attention. We offer: wide range of standard sizes, colored tubing and special sizes, quick delivery and right price.

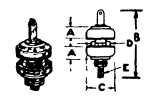
STEATITE BUTTONS



This specially designed Steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

"LUCITE" FEEDTHRU INSULATORS

These feedthru insulators are ideal for bringing high frequency leads thru a panel. They are made of genuine Dupont Lucite. Because of its low loss at high frequency, it is well adapted to insulated elements of high frequency circuits. The 1/2" dia. insulators have brass nickel plated 6-32 hardware and the 3/4" dia. insulators, 10-32 hardware.

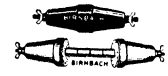
BIRNBACH LEADIN INSULATORS



Each cone is 2 3/4" high and made of low absorption, highly vitrified glazed porcelain. The Nos. 4237 and 4238 Leadin Insulators have sufficient insulating bushings to insulate the rod that goes through the wall. In addition, 2 bushings are included, 1/4" and 1/2" long, allowing complete insulation of the threaded rod of any length in multiples of 1/4". They come complete with brass nickel plated hardware and lead and cork washers to permit a water-tight seal.

t-v lead-in cables

Cornish TV Lead-in Cables are furnished only in pure virgin polyethylene insulation to insure long life under severe operating conditions and are designed so that only exceptionally low losses at high frequencies are experienced. They are available with pure copper or copperweld conductors. Copperweld 300 Ohm lead-in cable has 1½ times the tensile strength of copper and has approximately 2½ times greater flexing life. It insures long service life in TV aerial installations requiring long runs.

microphone cables

plastic microphone cable

All Belden Microphone Cables are exceptionally limp, with long flex life, low capacitance, high tensile strength, and high resistance to abrasion.

Plastic Microphone Cables, because of their non-marking jacket and lightness in weight, are excellent for use in audience participation programs.

For Hi-Fi installations, 8401 and 8411 are recommended as connector cords because of their low loss and low capacitance.

BELDEN ELECTRONIC WIRES & CABLES

broadcast audio cables

Belden Broadcast Audio Cables are designed to meet the most exacting requirements of the industry for trouble-free, dependable service. High insulation resistance, precision cabling of the conductors, and a high percentage of shielding assure a low noise circuit, free from crosstalk. Spiral wrap copper shield plus drain wire plus shield isolation eliminate current loops so often found troublesome in this service. Free stripping jackets and fast shield termination reduce installation time and costs to a minimum.

magnet wire

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

Other types of Belden Magnet Wires available are Beldenamel, Single Cotenamel, and Single Nyltex enamel.

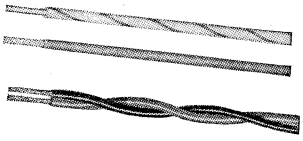
Rome Synthinol . . . . A ROME CABLE PRODUCT

THERMOPLASTIC INSULATED HOOK-UP WIRE



U/L Voltage Rating—300 Volts Max. Single and Two-Conductor Twisted Cable: Color Coded

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency. Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

Rome Synthinol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

SPECIFICATIONS

Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.
In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:
No. 22 Awg. .33" max. No. 30 Awg. .50" max.
Insulation: Rome Synthinol—Approved by and conforming to Underwriters' requirements and the performance specifications of A.S.T.M. D 734. Available in solid colors or with a surface applied contrasting colored spiral stripe.

Typical Test Results

Breakdown Voltage:
1/64" Synthinol .....over 10000 volts
1/32" Synthinol .....over 18000 volts
Insulation Resistance:
1/32" Synthinol .....over 5000 megohms feet

PERMALINE TV TRANSMISSION LINES

COLUMBIA is first to offer a television transmission line with an insulation so good that it can be GUARANTEED IN WRITING to give a service life far beyond the normal life of brown Polyethylene television lines. PERMALINE is a high molecular weight Polyethylene containing carbon black for maximum resistance to sunlight, which has been proven the chief factor in deterioration of ordinary television lines. The insulation value of 50 Mils of PERMALINE is equal to over 150 Mils of conventional brown Polyethylene.

Electrical characteristics of PERMALINE are very similar to Brown Polyethylene television lines but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown Polyethylene, which becomes brittle and cracks. This is truly the first new development in television transmission lines in ten years.

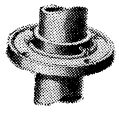
SAXTON LIGHTNING ARRESTOR

Identifying No. LA6

A highly efficient arrestor and static eliminator made of glazed reinforced porcelain for UHF and VHF applications.

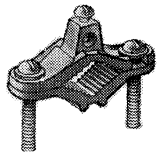
Positive protection is obtained by externally fusing both sides of line so that the circuit is broken prior to damage. Built-in compensating inductor improves reception by maintaining constant line impedance. Resistor network drains off static impulses and prevents dangerous potentials across the set terminals.



FLOATING GUY RING

Identifying No. FG

Cast aluminum, 2-piece floating guy ring (see illustration) fits masts up to 1½" in diameter. Available with 3, 4, or 6 holes. Standard 4-hole units will be shipped unless otherwise stipulated. Individually packed, complete with set screw hardware in individual plastic bags. 50 to the master carton.



GROUND MAST CLAMP

Identifying No. GMC

Brass alloy mast clamp for use in grounding masts or for effecting ground connection on cold water systems. Ridged tooth inner section makes for good, solid, effective ground. Complete with set screw. (See illustration.) 100 to carton.

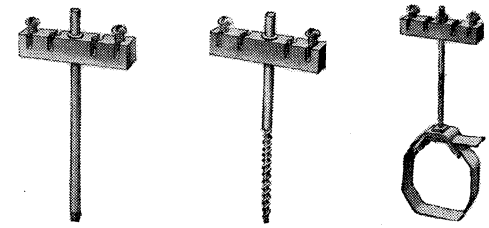
STAND OFF INSULATOR

Identifying No. "Tappee"

A standoff which is especially designed for use with open line transmission wire installations. To take up slack in line, tighten screws in slots after pulling taut. For use as ordinary spacer—partially tighten set screws (see illustrations). This will permit free movement of wire in the slots, thereby doing away with potential wire breaks due to backward and forward motion caused by wind. Ideal also for use as anchor point or spacer for "Fence Wire" installations.

For use in 600 ohm installation, use outside two slots. Particularly good for community installations, where random spacing of open lines is desirable to avoid tuned circuits created by regular spacing. Permits inexpensive, efficient, time-saving, trouble-free installations. For use with wire gauges from No. 12 to No. 18.

Molded polystyrene standoff with proper spacing for either 300 ohm, 450 ohm, or 600 ohm installations. 100 to box. 1000 to master carton.



SPIRAFIL CABLE

Information on Foamflex also available on request.

Spirafil is a semi-flexible, aluminum sheathed coaxial cable which is ideal for community antenna, broadcast, communications, or microwave work. A product of the Phelps Dodge Copper Products Corporation, it is impervious to migratory losses or variation of electrical value caused by chemical reaction, weather aging, or other influences commonly creating this condition. For use in underground or underwater applications, it is also obtainable with a high molecular weight polyethylene habirlene jacket which will allow such installations to be made without fear of corrosion for the life of the installation. Spirafil is made with an impedance of either 50 ohms or 70 ohms, and in either ⅜" or ½" diameters.

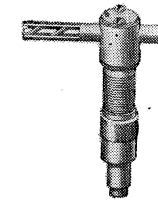
Identifying No. SP50-A ⅜" 50 ohm Spirafil
SP50-B ½" 50 ohm Spirafil
SP70-3 ⅜" 70 ohm Spirafil
SP70-B ½" 70 ohm Spirafil

For habirlene covering add H — i.e., SP 50-H is ⅜" Spirafil, 50 ohms impedance, habirlene covering. Spirafil must be ordered in units of 2000'. The unique construction of Spirafil, whereby the center solid copper conductor is centered in the solid, tubular aluminum sheath by means of a spirally wound polyethylene spacer, creates some very interesting features. Some of these features are no radiation, low attenuation, excellent frequency response, uniform electrical properties over wide temperature variations, and unlimited operating life. Additional information and specifications available on request.

TEE TAP CONNECTOR

Identifying No.

TTC—for coaxial cables
TTS—for Spirafil or Foamflex cables



The Saxton Tee Tap allows quick, electrically perfect connection to Spirafil or coaxial cables without cutting the distribution lines and without necessity for reinsulation.

The tapping arrangement also provides proper impedance match from the distribution line to the service line.

Identifying No.

TTC 59—from RG59 to RG59U

TTC 11—from RG11U to RG59U

TTC SP—from Spirafil or Foamflex to RG59U

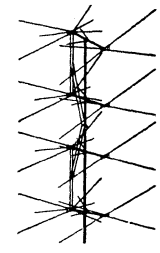
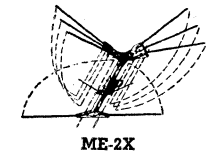
DESCRIPTIVE NOTES



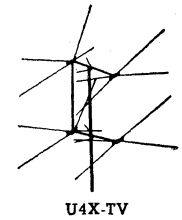
U-8X

Has "Hi-V" reflector. Specify whether solid or doweled tubular elements preferred. Eight plug-in rods and two stubs per bay permit multiplicity of radiator and reflector configurations. Quality of workmanship and rugged construction is second to none—finest Conical-V Beam built. "If the U-8X-TV does not provide a usable signal, TV reception is impossible or impractical."



ME-2X

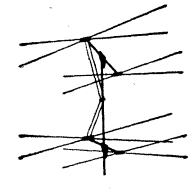
Has "Hi-V" reflector. All elements are hardware factory mounted and captivated. Combines hurricane design and high-speed-assembly. Solid rod elements insure low wind resistance and long life. Has cylindrical dipole reflector.



U4X-TV

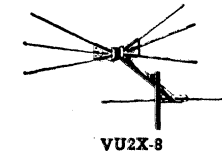
With "Hi-V" reflector. Specify whether solid or doweled tubular elements preferred. Shipped with 8 plug-in rods per multi-arrangement bay. This, and completely aluminum construction, makes the "Universal" an outstanding value.

Receive all channels. Same antenna as "Universal" except center elements cut to peak at any channel specified, without destroying the antenna's broad band characteristics. Has "Hi-V" reflector.

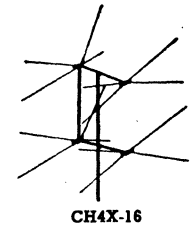


4X-TVS

Special ½-wave stacking and other design details gives this antenna optimum performance on channel 2 to 13 with exceptional low S/W/R. Eight solid or doweled tubular elements. All-aluminum construction.

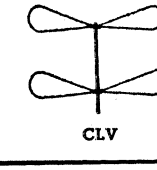


VU2X-8



CH4X-16

7/32" D. solid duraluminum rod, or doweled tubular elements. Six supplied in the 2X-6 type; eight elements, in the 2X-8 type. Both types feature "Universal" style "butterfly" element brackets, at each end of the crossarm, facilitating several radiator and reflector arrangements.



CLV

Requires no rotator to pick up signal from front or back. Transposition bar stacking gives vertically narrow, noise-free reception lobes. Tough closed loops yield lightly in high winds, but have no tendency to snap off.

"Conical-V-Beams" are produced under re-issue Pat. No. 23,346, and Canadian Pat. No. 500436 and in England Pat. No. 691485.

MODEL U2V, UHF CONVERTER

Pulling UHF pictures out of the snow where other converters haven't a chance, the U2V top mounted mixer head converts right at the antenna. The UHF oscillator is mounted at the amplifier location (or at the TV receiver for individual home installations) and feeds signals for conversion up to the mixer (a technique developed in radar installations). Signals leave the mixer as VHF so coaxial cable may be used. The U2V will convert any UHF channel to any VHF channel. Order by specifying UHF channel to be converted to a specific VHF channel.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

REFERENCE DATA FOR REPLACEMENT APPLICATIONS

NOTE "A"

Tuners listed in Col. 1 are basic types supplied to television set manufacturers for original equipment.

Frequently the receiver manufacturer assigns his own type number to the tuner — however, in all cases the **Standard** Coil basic types TV - 100 - TV - 2200, etc., etc., always appears on the tuner chassis.

Note that TV - 1501 or TV - 1526, etc., etc., falls under the category of the TV - 1500 type and that TV - 2201 or TV - 2246, etc., etc., would come under the TV - 2200 type and so on.

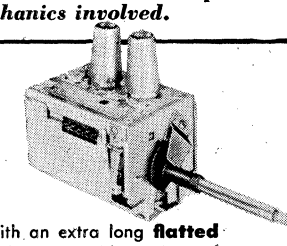
NOTE "B"

The "T" Type approved replacement tuners listed in Col. 2 are **NOT** manufactured with sound traps as integral parts for split sound I.F. systems.

For those systems which previously required the use of a 21.25 MC I.F. sound "take off" coil connected to the tuner converter plate circuit, we have developed our sound "take off" coil part XM752. This coil can be mounted in a suitable location on the TV chassis. Detailed instructions are packed with each coil.

The various tuner types (TV200 - TV2200 - TV6500, etc.) were brought about by the rapid development in the art of tuner design and development and, to enable Standard Coil to keep pace with the set makers' changes in circuitry, cabinet design and the mechanics involved.

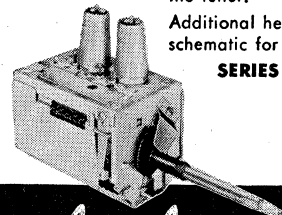
IMPORTANT INFORMATION FOR REPLACEMENT APPLICATIONS



SHAFT LENGTHS (1) Each approved replacement tuner in Col. 2 is equipped with an extra long **flatted** shaft extending 10-11/32" from front of tuner chassis making it interchangeable mechanically in a wide variety of applications. Installation instructions, including proper circuit diagrams and detailed data on how to cut shafts to proper length included with each tuner.

MOUNTING DIMENSIONS (2) Mounting dimensions are standard for almost all applications.

I.F. CIRCUITRY (3) The I.F. output of the approved replacement tuners in Col. 2 will match the input of the I.F. amplifier in many cases. However, some applications may require a modification of the coupling networks **i.e.** low side capacitive coupling or two-or-three turn link, wound over the B+ end of the I.F. Coil in the tuner.



Additional helpful information can be secured by referring directly, to the TV receiver manufacturer's schematic for the proper type of tuner output circuitry, necessary for optimum receiver performance.

SERIES HEATER DATA (4) The "T" types listed in Col. 2 are not available at present for replacing series heater type tuners (with 600 mil. tubes) requiring insulated shafts or any other tuners with insulated shafts or special applications requiring rear shaft extensions.

American Beauty BANTAM SOLDERING IRONS

Small, compact and lightweight as they are, American Beauty Bantams — like every other model of our line of electric soldering irons — are built to American Beauty traditional quality standards and designed especially for the electronic trade.

They are instantly ready for use; on the other hand, they can be idled for as much as twenty-four hours a day without damage to iron or tip. Their 30-watt input (40-watt also available) provides ample heat for fine and medium-fine soldering jobs of all kinds.

The six models of American Beauty Bantams are the same in design and construction except for the length of casing, tip size and shape of handle.

Handles of our Bantams are flared to protect hand of user from coming in contact with casing of hot iron.

As an added safeguard, a special fibre disc shield is available. Mounted between a welded retainer ring and the handle, it provides additional protection. When ordering, specify "with shield." A small additional charge applies.

*Also available with angle-type casing covered by Catalog Nos. 3118-A, 3120-A.

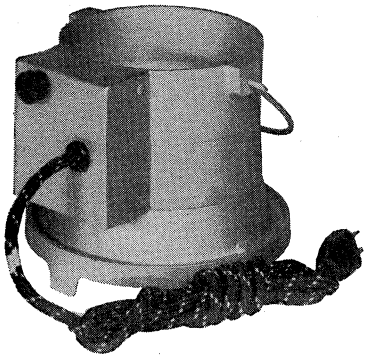
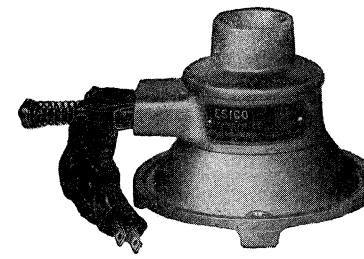
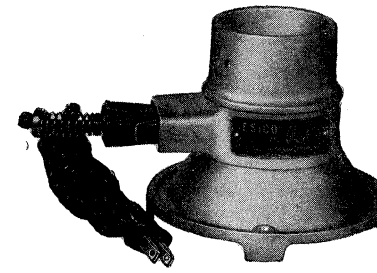
ESICO Electric Solder Pots



This small pot is used largely for individual dipping of small parts and reaches a temperature of approximately 750°. For higher temperatures, it is possible to use either a #36 or a #60 element. See table below for details. **No. 12** →

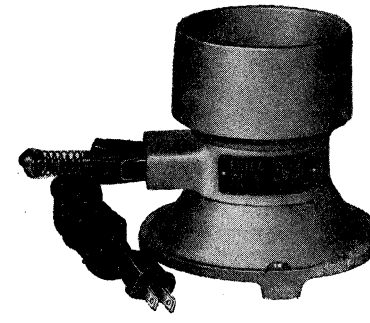


No. 70T ← This is a thermostatically controlled pot, maintaining a temperature of 400/600° to within plus or minus 4°. Adjustable control permits the pot to be used anywhere between these two temperatures. See table below for details.

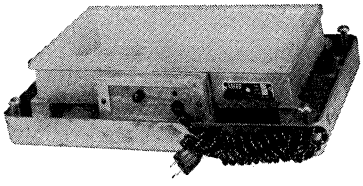


This pot is used for dip soldering of bundles of lead wires and where a slightly hotter pot is required than the #12. It operates at approximately 750°. If a higher temperature is required, a #60 element may be used. See table below for details. **No. 36** →

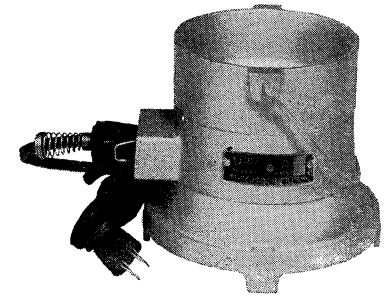
No. 75T ← This pot is similar in operation to the #70T, but is intended for the dipping of small panels which cannot be accommodated in a round pot. Temperature range is 400/600° plus or minus 4°. The pot is also available without a thermostat but is then catalogued as #75. Without a thermostat, the pot reaches a temperature of 850°. See table below for details.



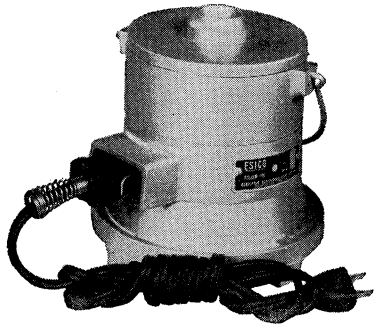
This pot is used for volume tinning and operates at a temperature of 800°. On occasion where production requires greater heat drain capacity, elements of a higher wattage than the standard 325 watt have been supplied. However, we recommend the use of the #70 600W Pot for this greater heat requirement and higher temperature. See table below for details. **No. 60** →



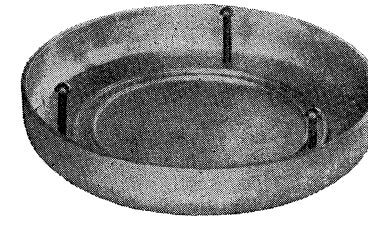
No. 80 ← This pot is intended for printed circuit panels and is thermostatically controlled. Temperature range is 400/600°. The pot stands on 4 corner posts in a sand tray, which has screws for leveling. See table below for details.



This is a high heat pot reaching a temperature of approximately 900°, and has considerable heat drain capacity. Where pots are required for 220V operation, longer element life will be secured than in the case of the #60. See table below for details. **No. 70** →



No. 90 ← This is a high temperature pot intended for silver soldering, and will maintain a temperature of 1300/1500°. See table below for details.



This sand tray will accommodate all of the round base solder pots shown on this sheet. The tray is fitted with leveling screws. See table below for details. **No. 1270** →

¼ Ounce PRECISION SOLDERING INSTRUMENTS

Model 6

The smallest, lightest ORYX soldering instrument. Its precision tip greatly simplifies the manufacture and service of electrical measuring instruments, hairspring movements, r.f. coils, and fine subassemblies of all kinds. Particularly recommended for soldering to transistors and diodes!

Model 6A

The most popular ORYX soldering instrument. Model 6A combines the light weight advantages of Model 6 with the convenience of inexpensive, replaceable tips. Widely used on hearing aids, tuners, printed circuits, and transistor amplifiers.

Model 9

An outstanding recent development! Model 9 is unequaled for use on complex circuitry; radar, color television, missile subassemblies, electromedical devices, all applications calling for a precision tool with generous heat capacity.

Model 11

NEW! This special high-temperature model develops a searing 400 degrees C. Specifically designed for high-temperature solder alloys and applications requiring a hotter iron. Uses pure nickel tip.

Model 12

The standard ORYX instrument for radio and television service and manufacture. Model 12 has unbelievable heat capacity and is widely used by production departments, service shops, and radio amateurs.

TECHNICAL ADVANTAGES

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

ONLY SOLDER MADE WITH NON-CORROSIVE, EXTRA-ACTIVE ERSIN FLUX!

MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

SILVER Q FLUX

- Especially compounded for radio soldering
- Leaves no gummy residue
- Does not stain the work

Silver Q is a free-flowing flux designed for fine metal soldering. Silver Q is applied with a small brush to the surface to be soldered. When the work is rapidly heated and coreless solder is applied, the solder flows almost instantly over all fluxed surfaces—even into the tightest joints. Excess flux may be wiped off with a damp cloth. Silver Q leaves no stain or gummy deposits on the work.

For further information write for Bulletin RM-1A.

DECASOL ADHERENT

- Bonds decals permanently
- Improves adherence to rough surfaces

Decasol decal adherent is a permanent bonding medium for attaching decals to paint, plastic, or enamel surfaces, either rough or smooth. Decasol is a solvent which dissolves the back of the decal into the surface to which it is applied. Decasol should be used when decals are subject to extremely hard usage, or prolonged dampness. It is impossible to remove a decal adhered with Decasol without damaging the surface.

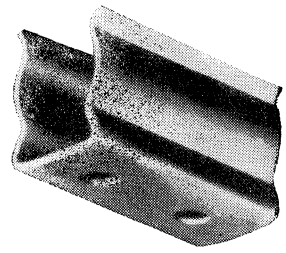
SPECIFY ATLEE PRODUCTS—WHEN YOU WANT THE BEST!

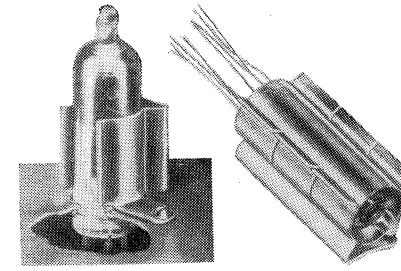


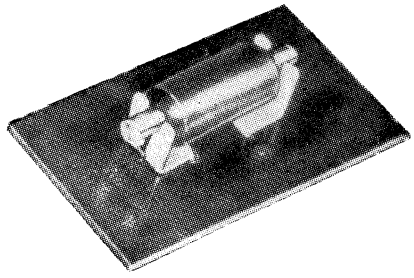
atlee COMPONENT HOLDERS

Provide firm holding under extreme shock and vibration. For capacitors, resistors, relays, wires, cables, tubing, etc. Withstand vibrations of 10 to 500 cycles and 5 to 20 G's for eight hours without resonant frequencies. Structurally designed to derive maximum grip from the component itself. Made of spring steel which flexes under heavy vibration and temperature changes, automatically increasing holding power when most needed. SPECIFICATIONS: SAE #1065 tempered carbon steel, formed in the annealed state, cadmium plated, per QQ-P-416, Class B Type II iridite #4, able to withstand minimum 50-hour salt spray test, per AN-QQ-S-91. SIZES: 0.175 to 1.125. FIL-O-MATIC REFERENCE: section 19, page 4, for more information.

atlee SUBMINIATURE TUBE HOLDERS AND SHIELDS

For conditions of extreme shock and vibration, high-rate heat dissipation and minimum-space mounting. Withstand up to 20 G's at 500 cycles without resonant frequencies; average heat reduction over 50° (tests); low center design for minimum space — maximum holding power. Ultimate in convenience — no wrap-around motions in cramped spaces — just clip in or clip out. Tubes can freely be removed and replaced without loss in Holder performance. Holders available in silver alloy and silver-plated berylium copper as well as cadmium-plated tempered carbon steel. Shields available in silver alloy and silver-plated brass. Vertical and Oval Subminiature Tube Holders available in tempered carbon steel. FIL-O-MATIC REFERENCE: section 19, pages 1 and 2, for more information.



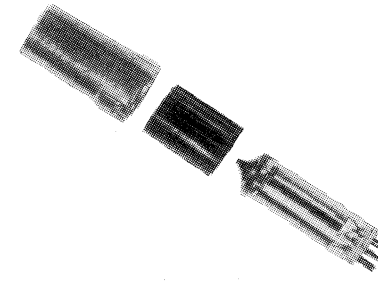


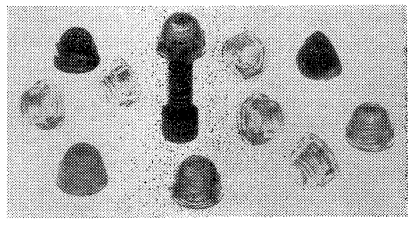
atlee CRYSTAL DIODE CLIPS

For miniature, low-cost support and/or connection of crystal diodes. Tiny, compact, yet strong and durable. Assure positive electrical contact under high shock and vibration. Can be dip-soldered or riveted into printed circuits. Afford convenience as well as diode protection — no solder joints to make or melt, just clip diode in or out. 100 insertions and withdrawals reduce gripping force less than 6 ounces. SPECIFICATIONS: silver-plated phosphor bronze, spring temper, grade A, per MIL-B-892; contact resistance: 0.00075 ohms; capacitance: less than 1 mmf between clips, $\frac{9}{16}$" spacing; insertion or withdrawal force: 2 lbs. (initial). SIZES: 0.065" to 0.085" (terminal pin), for thru-panel, surface-panel or rear-of-panel mounting. FIL-O-MATIC REFERENCE: section 19, page 3, for more information.

atlee JAN SHIELD INSERT

Designed to reduce tube failures, the JAN Shield Insert lowers miniature tube bulb temperatures by as much as 100°C. and provides almost perfect electrostatic shielding. It was developed by the Reliability and Standards Branch of the Navy Electronics Laboratory. The JAN Shield Insert is made of corrugated brass shim stock with Ebonol C finish, to withstand 50-hour salt spray test. Bent into circular shape, with the ends fitted together, it is inserted inside the older JAN Shields in all present equipments. The Insert makes contact with the glass bulb on one side and with the Shield on the other, distributing the hot spot on the tube and conducting the heat to the shield with a greater radiating surface. Available in small, medium and large, for both 7 and 9-pin tubes. Send for bulletin for more information.





atlee LUCITE CAP NUTS

For superior electronic assemblies. Non-corrosive, non-fungi nutrient. Cannot be shaken loose by vibration. Extremely useful as lock nuts over conventional metal nuts. Easy to put on — hard to take off. Due to the microscopic "nap" developed as the Lucite Nut is tightened by hand in one direction, a real force by a wrench is necessary to reverse that "nap" and loosen the Cap Nut. Repeated screwing and unscrewing, however, does not affect this locking quality. Made of clear methyl methacrylate, they are available either clear or dyed. Using standard colors, color coding for circuit identification is possible with dyed Cap Nuts. SIZES: 4-40, 6-32, 8-32, 10-24, 10-32, 12-24, $\frac{1}{4}$-20, $\frac{5}{16}$-18. Send for bulletin for more information.

. . . *IN INDUSTRY, TOO!*

• Complete protection against moisture, fumes, dilute acids, fungus, corrosion. Krylon protective properties are superior to conventional coatings . . . enable 1000's of end-uses for preservation and protection.

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt.

If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread, it will be our "circumference around pulleys." In measuring belts always remember that the **circumference around pulleys** is not the same as **stretched out or cut length.** A belt when cut, develops approximately $\frac{3}{32}$" extra length when stretched out, depending on thickness of belt.

BALL BEARING RATIO DRIVES

A Totally New Concept! Up to 20:1

For exceptionally smooth control of electronic components in instruments. A unique series of "in-line" ratio drives utilizing precision, ball-bearings, provide exceptionally smooth rotary control of circuit functions in electronic applications. Ruggedly built and permanently lubricated, these units are small in size.

Cat. No.	Ratio	A	B	Output shaft C	D	Mtg. Ctr. Dia. E
RDL-1	2.66:1	29/32	1-1/8	1/4	1-3/4	1-3/8
RDL-2	7.08:1	1-11/32	1-1/8	1/4	1-3/4	1-3/8
RDL-3	18.8:1	1-3/4	1-1/8	1/4	1-3/4	1-3/8
RDS-1	2.7:1	19/32	5/8	1/8	1-1/8	7/8

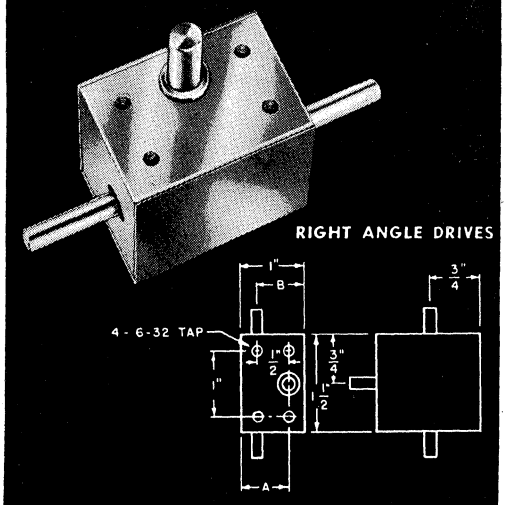
RDS-3	19.65:1	1-1/64	5/8	1/8	1 1/8	7/8

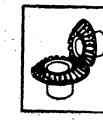


RIGHT ANGLE RATIO DRIVES

Featuring dual output shafts, this series of miniature, right angle drives for the control of components, is available with matched bevel or worm gears with a wide range of ratios. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless steel shafts, mounted in oilite bearings and held under constant pressure, with thrust washers.

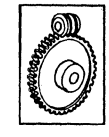
BEVEL GEAR RIGHT ANGLE DRIVES

Cat. No.	Ratio	"A"	"B"
RABG-1	1:1	1/2	1/2
RABG-2	2:1	1/2	1/2
RABG-3	3:1	1/2	1/2

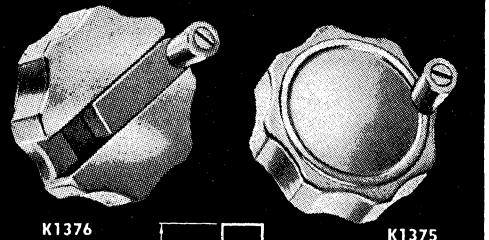


WORM GEAR RIGHT ANGLE DRIVES

Cat. No.	Ratio	"A"	"B"
RAWG-1	5:1	3/4	3/4
RAWG-2	10:1	3/4	3/4
RAWG-3	20:1	3/4	3/4



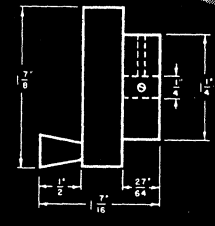
Note: JAN'S WORM GEAR RIGHT ANGLE DRIVES are especially suited to handling spring or gravity loaded components since the output shaft automatically locks in any desired position and is controlled only by the input shaft which remains free for smooth drive in either direction.



SLIP-CLUTCH KNOBS

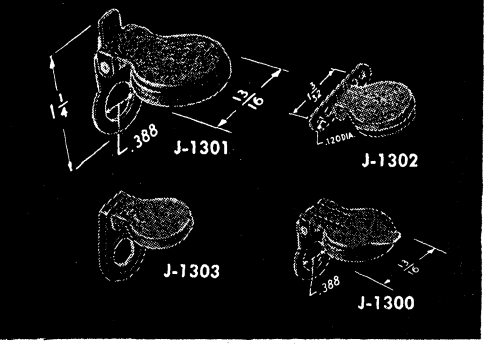
Fixed or Retractable Spinner

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs work on the principle of a "slip-clutch," automatically disengaging and slipping when a predetermined torque is exceeded. JAN'S SAFETY KNOBS are fluted to aid in sensitive adjustment and also have either a fixed or a retractable spinner for fast turning. Made from single unit construction, molded Bakelite-to-metal inserts, these knobs safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops. Note: Model K-1376 is identical to Model K-1375 but has the additional feature of a retractable spinner. It has a positive toggle type action, being spring loaded in either open or closed position and thus is useful where equipment must fit into small spaces.



SPINNER KNOBS

Models K-1275 and 1276 are spinner knobs having an identical appearance to K1375 and K1376 respectively and are available without the slip-clutch mechanism. Designed for 1/4 inch shafts, these knobs are made from single unit construction, molded black bakelite-to-brass insert. Supplied with two set screws for firm attachment to the shaft.



JACK COVERS (Trimmer Covers)

These sturdy JACK COVERS are used to keep out dust and moisture and to prevent inadvertent disturbance of control settings. They are made of steel finished in enamel after bonderizing. Supplied assembled with stainless steel spring, hinge pin and neoprene pad. Fit jack or panel bushings. Supplied in three standard finishes. For black wrinkle specify (-1), smooth grey(-2), olive drab (-3) or other colors to order.

NOTE: J-1300 "SNAP-JACK" IS A TOTALLY NEW DESIGNED JACK COVER. IT SNAPS TO OPEN OR SHUT POSITION AND WILL REMAIN OPEN TO 90° until snapped shut!

J-1304 IS A MINIATURIZED JACK COVER SIMILAR TO J-1301.

"JOLTA" SHOCK TESTING MACHINES

JAN'S "Jolta" shock testers for small components provide for rapid and precise testing of anticipated shock stresses. Designed for laboratory and production testing of instruments such as relays, electric meters, clocks, transistors and other electrical and electronic devices, they are accurately calibrated for direct readings in accord with specifications now required in most military and Commercial contracts. The testers are ruggedly built and accommodate all shapes of test specimens. Specimens may be tested while in actual operation and under electrical load. Each machine is individually calibrated and computation charts are supplied thus insuring accurate interpretation of test results. JOLTA SHOCK TESTERS feature the exclusive JAN INERTIA BRAKE which automatically captures the carriage at the summit of its first rebound eliminating secondary (irrelevant) shocks and dangerous manual grasping.

JAN THICKNESS GAUGES

JAN's thickness gauges are a necessity for adjusting condenser plates and microwave plumbing. They also suit the needs of the engineer and the machinist for general use — such as measuring shim stock requirements, determining flatness of machined parts, amount of backlash, and adjusting drill jig or milling fixtures. These gauges are manufactured from fine grade hardened and tempered steel, with tolerances of plus or minus .00025" to .0005", and are guaranteed to be accurate. All numerals are permanently etched and legible.

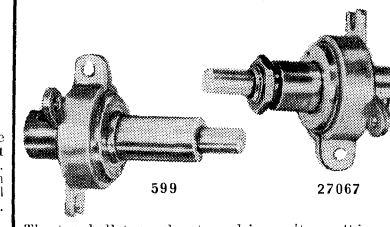
Auxiliary Planetary Drives



599 27067

The two ball-type planetary drive units on this page are useful whenever a compact device is needed for reduced-speed operation of light mechanisms. Both have a ratio of approximately 5 to 1. They may be used as auxiliaries to existing instruments or incorporated in new construction.

Both of these units have hubs to fit ¼" instrument shafts.

Croname planetary units are made as detailed below. To meet all needs, there are single speed and two speed models. If desired two planetaries can be operated in tandem to produce a combined ratio of approximately 25 to 1; a drive ratio of 5 to 1 will also be available at the same time if the front unit of the pair is one of the two-speed units.

Two-Speed Planetary Drive

No. 599—This is an "A Type" adjustable unit as explained below. Permits slow speed operation at approximately 5 to 1 ratio and high speed at 1 to 1. Our No. 6665 pair of knobs below fits this unit. No. 599 is a precision device used for both military and civilian production. Can be used as a single-speed drive by omitting knob on the high-speed sleeve. Complete with mounting accessories.
List Price ea. $10.61

Single Speed Planetary Drive

No. 27067—"Type A." This unit is the same as No. 599 described above except that the sleeve for a high-speed knob has been omitted; in its place there's a threaded sleeve with shoulder so an indicating dial or pointer may be installed. Clamping nut, clamping washers and planetary anchor stud are included. Has ¼" diameter knob shaft and fits ¼" diameter instrument shaft. **List Price ea. $10.61**

All Croname planetary units depend on the action of steel balls that rotate between the knob shaft and a concentric sleeve that is attached to the driven instrument. "Type A" units are adjustable so that the pressure on the balls can be varied to match the operating load; this assures maximum smoothness while maintaining adequate torque. Maximum torque 14 inch ounces; minimum torque 10 inch ounces.

6665 104

Pair of Knobs

No. 6665—These knobs fit the No. 599 two-speed planetary drive. Larger knob is aluminum. 1 3/16" diameter drilled 7/16" to fit high-speed sleeve on planetary. Smaller knob is molded black butyrate with brass insert to fit ¼" low-speed planetary shaft. Both are supplied with set screws.
List Price ea. $1.12

Auxiliary Gear Type Drive Unit

No. 104—GEAR REDUCTION UNIT. Double-gear and spring design eliminates back-lash in this gear and pinion mechanism. Provides 6 to 1 ratio between knob shaft and drive shaft of your instrument. Accepts any knob with ¼" shaft hole and has removable reducing bushing in hub so the same unit can be used on either ¼" or ⅛" instrument shaft. Complete with set screw. **List Price ea. $7.30**
